Mathematiques Algebreanalyse Geometrie:

Dictionnaire des Mathématiques Collective, 1997 65 articles et environ 140 figures proposent une vision d'ensemble de l'algèbre de l'analyse de la géométrie et de leurs intrications géométriques algébriques espaces vectoriels topologiques Autant de développements théoriques modernes concernant des problèmes parfois très anciens 41 auteurs dont Lucien Chambadal Jean Dieudonné Christian Houzel Claude Morlet Jean Louis Ovaert Jean Luc Verley et André Warusfel

Cours de mathématiques Jacques Vauthier, Claire Cazes, Mirella Krée, Paul Krée, Anne-Cécile Vauthier, 2005 La forme dite du LMD ou Licence Maîtrise et Doctorat nécessite une refonte des ouvrages mis à la disposition des étudiants Les années de licence ne sont pas marquées par des examens terminaux portant sur l'intégralité d'un programme mais sont composées en modules indépendants ayant chacun une valeur en crédits européens Les étudiants comptabilisent ces crédits 60 par année et doivent en obtenir 180 pour recevoir leur diplôme de Licence Les chevauchements entre les années sont donc inévitables et une nécessaire transversalité entre les programmes rend nécessaire pour plus de commodité la mise à leur disposition d'un seul ouvrage qui les suivra pendant les deux premières années de licence Ce livre offre la fois le cours qui est modulaire et les exercices associés gradués en fonction de leur difficulté Le cours est écrit dans un style qui se veut le plus proche de celui qui est utilisé pour la mise sur Internet de contenus scientifiques il permet une plus grande proximité avec l'apprenant qui est souvent seul face son ordinateur Enfin on voudrait rappeler que les amphithéâtres de la Cinquième chaîne diffusent des missions de synthèse sur les parties essentielles du cours chaque semaine Les exercices proviennent pour certains de textes d'examen et permettent ainsi l'étudiant de vérifier ses connaissances Ce livre s'adresse aussi aux candidats aux concours des grandes écoles et ceux qui préparent le CAPES ou l'Aggrégation interne

Cours de mathématiques L1 et L2 Vauthier, Jacques, 2005 La forme dite du LMD ou Licence Maîtrise et Doctorat nécessite une refonte des ouvrages mis à la disposition des étudiants Les années de licence ne sont pas marquées par des examens terminaux portant sur l'intégralité du programme mais sont composées en modules indépendants ayant chacun une valeur en crédits européens Les étudiants comptabilisent ces crédits 60 par année et doivent en obtenir 180 pour recevoir leur diplôme de Licence Les chevauchements entre les années sont donc inévitables et une nécessaire transversalité entre les programmes rend nécessaire pour plus de commodité la mise à leur disposition d'un ouvrage de cours et un autre d'exercices qui les suivront pendant les deux premières années de Licence Pour comprendre un cours et se rendre compte du niveau exigé un examen ou un concours il est essentiel de faire des exercices Ceux qui sont proposés ici répondent ce double objectif assimiler en profondeur des notions nouvelles puis être capable d'aborder des sujets plus laborieux Pour gagner encore en efficacité ils sont précédés par chapitre de commentaires permettant de mieux centrer le travail de l'étudiant sur les points clés du programme c'est une aide à la lecture des chapitres du livre de cours correspondant de cette collection Les auteurs dans ces volumes d'exercices ont ainsi scrupuleusement suivi chaque chapitre en lui associant ses exercices spécifiques Les exercices notés A de difficulté croissante clarifient les théorèmes et les techniques fondamentaux

Les exercices notés B sont des sujets d'examens ou des textes demandant plus de recherche. Les exercices sont donc indispensables pour valuer les compétences acquises et s'assurer de la bonne assimilation des concepts. Il faudra cette occasion faire la différence entre les procédures et les concepts. Par exemple, on peut savoir résoudre une équation différentielle linéaire sans savoir le lien qui existe avec les autres structures vectorielles, mais on ne comprendra vraiment l'existence de certaines constantes que dans ce cadre conceptuel. Tous les exercices ont été proposés dans les travaux dirigés de l'université et font partie du fonds commun. C'est pour cela que nous ne pouvons que redire avec Pascal mathématicien et philosophe : Certains auteurs parlant de leur ouvrage disent mon livre, mon commentaire, mon histoire. Ils sentent leur bourgeois qui ont pignon sur rue, toujours un chez moi, la bouche. Il serait mieux de dire notre livre, notre commentaire, notre histoire, vu que d'ordinaire il n'y a plus en cela du bien d'autrui que du leur. Ils proviennent pour certains de textes d'examen et permettent ainsi l'étudiant de vérifier ses connaissances. Ce livre s'adresse aussi aux candidats aux concours des grandes écoles et ceux qui préparent le CAPES ou l'agrégation interne. L'étudiant dispose ainsi avec le volume de cours et ce volume d'exercices d'un outil de travail complet pour suivre sa progression scientifique et couvrir le programme des deux premières années de licence ou des classes préparatoires.
