Mating Trade:

Mating Intelligence Unleashed Glenn Geher, PhD, Scott Barry Kaufman, PhD, 2013-02-14 Until recently evolutionary psychologists have considered human mating behavior to be universal and similar to other animals painting a picture of human mating as visceral animalistic and instinctual. But that's not the whole story. In courtship and display sexual competition and rivalry we are guided by Mating Intelligence or the range of psychological abilities designed for sexual reproduction. In this book psychologists Glenn Geher and Scott Barry Kaufman take a fascinating tour of the intersection of mating and intelligence by drawing on cutting edge research on evolutionary psychology, intelligence, creativity, personality, social psychology, developmental psychology, neuroscience, epigenetics, and more. This book will change the way you think about sex, dating, love, and the human mind.

Selection and the Origins of Human Mating Systems Alan F. Dixson,2009-05-15 Comparative analyses of the anatomy reproductive physiology and behaviour of extant primates and other mammals can offer important insights into the origins of human sexual behaviour allowing us to reconstruct the origins of human mating systems the evolution of sexual attractiveness patterns of mate choice and copulatory behaviour Sexual Selection and the Origins of Human Mating Systems provides a modern synthesis of research on the evolution of human mating systems bringing together work on reproductive physiology behavioural biology anthropology primatology palaeontology evolutionary psychology and sexological research The approach taken is genuinely cross disciplinary in scope and provides a fascinating account of the effects of sexual selection upon human evolution in the light of the latest advances in the field **Dating, Mating, and Marriage** Martin

King Whyte,2018-02-06 This book examines the American system of dating mate choice and marriage It analyzes a wide range of established ideas about how dating and mate choice are changing and identifies changes and continuities in premarital experiences in twentieth century America A variety of ideas about what sorts of dating and premarital experiences will make for a successful marriage are tested and for the most part disproven raising serious doubts about our fundamental assumption that dating experience helps individuals make a wise choice for a future mate Marital success turns out to depend not so much on premarital experiences or on the social background characteristics of couples such as race religion and social class as on the way in which couples structure their day to day marital life together Through its detailed examination of a wide range of ideas and predictions about dating mating and marriage and through its dramatic findings Dating Mating and Marriage challenges many previous assumptions and conclusions about the fate of American marriage and elevates our knowledge of the American system of mate choice to a higher level **The Mating Trade** Robert Mullan,2023-08-24 Are marriages made in heaven In reality many people need a little help in the arrangement of such

matters Originally published in 1984 the author s clear sighted look at the mating trade takes some of the mystique away from the subject and is the first serious and detailed account of the third party in marriage [The Oxford Handbook of Human Mating](#) David M. Buss,2023 The scientific study of human mating has mushroomed over the past three decades This handbook showcases the best and the brightest scientists in the field providing up to date summaries of theories and empirical evidence of the science of human mating strategies It includes major sections on theories of human mating mate selection and mate attraction mate competition sexual conflict in mating human pair bonding the endocrinology of mating and mating in the modern world [The Mating Trade](#) Robert Mullan,Taylor & Francis Group,2022-02-24 Are marriages made in heaven In reality many people need a little help in the arrangement of such matters Originally published in 1984 the author s clear sighted look at the mating trade takes some of the mystique away from the subject and is the first serious and detailed account of the third party in marriage **Sexual Selection in Homo sapiens** Menelaos Apostolou,2017-06-20 The present book aims to examine how sexual selection works in the human species Almost all scholarly effort focuses on sexual selection in non human species and extrapolates the findings to the human one However human mating has a unique pattern not found in any other species namely parental influence over mate choice Across preindustrial societies the typical pattern of long term mating is arranged marriage where parents choose spouses for their children By doing so parents effectively become a sexual selection force Traits that enhance an individual s chance to be selected as a son or a daughter in law confer important reproductive advantages to those who are endowed with them increasing in frequency in the population The author has coined the term parental choice to describe the sexual selection force that arises from parental control over mating He synthesizes extensive theoretical and empirical work in order to understand and model this force The aim is to understand which factors give rise to parental choice and to combine these insights into constructing a more formal model It also aims to further examine whether the predictions of the model fit the patterns of mating found across different types of human societies and how the model can be used to understand the evolution of behavioral traits involved in mating By synthesizing the various arguments put forward and published across the literature the book offers a comprehensive argument and overview of an aspect of sexual selection unique to our species Furthermore the book revises and extends previously made arguments and models while it provides useful insights on how the proposed revision of sexual selection theory can enable us to understand a wide range of human behavioral phenomena It should be key reading for those interested in studying sexual selection in general and in the *Homo sapiens* species in particular [Migration](#) Hugh Dingle,2014 Migration broadly defined as directional movement to take advantage of spatially distributed resources is a dramatic behaviour and an important component of many life histories that can contribute to the fundamental structuring of ecosystems In recent years our understanding of migration has advanced radically with respect to both new data and conceptual understanding It is now almost twenty years since publication of the first edition and an authoritative and up to

date sequel that provides a taxonomically comprehensive overview of the latest research is therefore timely. The emphasis throughout this advanced textbook is on the definition and description of migratory behaviour its ecological outcomes for individuals populations and communities and how these outcomes lead to natural selection acting on the behaviour to cause its evolution. It takes a truly integrative approach showing how comparisons across a diversity of organisms and biological disciplines can illuminate migratory life cycles their evolution and the relation of migration to other movements. Migration The Biology of Life on the Move focuses on migration as a behavioural phenomenon with important ecological consequences for organisms as diverse as aphids butterflies birds and whales. It is suitable for senior undergraduate and graduate level students taking courses in behaviour spatial ecology movement ecology and conservation. It will also be of interest and use to a broader audience of professional ecologists and behaviourists seeking an authoritative overview of this rapidly expanding field.

Evolutionary Forensic Psychology Joshua Duntley,Todd K. Shackelford,2008-08-20 The field of forensic psychology explores the intersection of psychology and the law. The purpose of this book is to examine topics in the field using the powerful multidisciplinary conceptually integrated approach that the natural sciences have embraced for decades with great success. Darwin's theory of evolution by natural selection is the meta theoretical framework that unifies the field of biology. It unites research and understanding of the development control and organization of behavior. The study of humans which includes all of the social sciences is part of the field of biology. Darwin's theory provides a powerful meta theoretical framework that can unify and energize forensic psychology just as it has the biological sciences. Evolutionary processes undoubtedly shaped physiological characteristics to help solve problems of survival and reproduction. The lungs for example with their vast surface area and moist membranes are marvelous adaptions for extracting oxygen and releasing carbon dioxide. Natural selection is the only known process capable of shaping complex functional mechanisms. Just as it shaped physiological adaptations with specific problem solving functions it also shaped our thoughts and emotions to guide behaviors toward solving recurrent problems of survival and reproduction. With this logic we can use knowledge of ancestral problems to guide our understanding of how the mind works. Evolutionary Forensic Psychology is a necessary step toward a unified and complete understanding of psychology and the law. It recognizes that crimes such as murder non lethal violence rape and theft are manifestations of evolutionarily recurrent selection when they gave individuals an advantage in competition for resources. Each of the chapters that comprise this volume has been selected to provide the first unified examination of important research contributions and future directions of Evolutionary Forensic Psychology.

Mate Choice Gil G. Rosenthal, 2017-07-18

A major new look at the evolution of mating decisions in organisms from protozoans to humans. The popular consensus on mate choice has long been that females select mates likely to pass good genes to offspring. In *Mate Choice* Gil Rosenthal overturns much of this conventional wisdom. Providing the first synthesis of the topic in more than three decades and drawing from a wide range of fields including animal behavior evolutionary biology social psychology neuroscience and economics Rosenthal argues that good genes play a relatively minor role in shaping mate choice decisions and demonstrates how mate choice is influenced by genetic factors environmental effects and social interactions. Looking at diverse organisms from protozoans to humans Rosenthal explores how factors beyond the hunt for good genes combine to produce an endless array of preferences among species and individuals. He explains how mating decisions originate from structural constraints on perception and from nonsexual functions and how single organisms benefit or lose from their choices. Both the origin of species and their fusion through hybridization are strongly influenced by direct selection on preferences in sexual and nonsexual contexts. Rosenthal broadens the traditional scope of mate choice research to encompass not just animal behavior and behavioral ecology but also neurobiology the social sciences and other areas. Focusing on mate choice mechanisms rather than the traits they target *Mate Choice* offers a groundbreaking perspective on the proximate and ultimate forces determining the evolutionary fate of species and populations

Evolution and Social Psychology Mark Schaller, Jeffry A. Simpson, Douglas T. Kenrick, 2013-05-13
