Matter Of Consequences Part Three Of An Autobiography:

A Matter of Consequences Burrhus Frederic Skinner,1984 Threads of Life Richard Freadman. 2001-02 Many autobiographers share profound questions about human life with their readers questions like To what extent was my life imposed on me To what extent did I bring it about through particular choices and actions through the activity of my own will Indeed the issue of the will is central to autobiographical writing and some of the greatest autobiographies give extended consideration to the will its nature its powers its limitations the forms of freedom constraint and expression it finds in various cultures its role in particular human lives In this new study unprecedented in subject and scope Richard Freadman offers the first sustained account of how changing theological philosophical and psychological accounts of the human will have been reflected in the writing of autobiography and of how autobiography in its turn has helped shape various understandings of the will Early chapters trace narrative representations of the will from antiquity the Greeks and Augustine to postmodernism Derrida and Barthes with particular emphasis on late modernity s culture of the will Later chapters then present detailed and powerfully original readings of autobiographical texts by Louis Althusser Roland Barthes B F Skinner Ernest Hemingway Simone de Beauvoir Arthur Koestler Stephen Spender and Diana Trilling Freadman s interdisciplinary approach to autobiography and the will includes a theoretical defense of the view that autobiographers are in varying degrees agents in their own texts Threads of Life argues that late modernity has inherited deeply conflicted attitudes to the will Freadman suggests that these attitudes now deeply embedded in contemporary cultural discourse need reexamining In this he contends reflective autobiography has an important part to play The Science of Consequences Susan M. Schneider, 2012-12-11 Actions have consequences and the ability to learn from them revolutionized life on earth While it s easy enough to see that consequences are important where would we be without positive reinforcement few have heard there s a science of consequences with principles that affect us every day Despite their variety consequences appear to follow a common set of scientific principles and share some similar effects in the brain such as the pleasure centers Nature and nurture always work together and scientists have demonstrated that learning from consequences predictably activates genes and restructures the brain Applications are everywhere at home at work and at school and that s just for starters Individually and societally for example self control pits short term against long term consequences Ten years in the making this award winning book tells a tale ranging from genetics to neurotransmitters from emotion to language from parenting to politics taking an inclusive interdisciplinary approach to show how something so deceptively simple can help make sense of so much The **Psychology of B F Skinner** William O'Donohue, Kyle E. Ferguson, 2001-03-15 Behaviorists or more precisely Skinnerians commonly consider Skinner's work to have been misrepresented misunderstood and to some extent defamed In this book the author clarifies the work of B F Skinner and puts it into historical and philosophical context Though not a biography the book discusses Skinner himself in brief But the bulk of the book illuminats Skinner's contributions to psychology his philosophy of

science his experimental research program logical positivism and the behavioral principles that emerged from it and applied aspects of his work It also rebuts criticism of Skinner's work including radical behaviorism and discusses key developments by others that have derived from it Benjamin Franklin, Jonathan Edwards, and the Representation of American Culture Barbara Oberg, Harry S. The Classroom Arsenal remains pivotal in understanding and challenging the relentless promotion of technology to reform education This seemingly benign education technology juggernaut carries forward the momentum of military agendas in man machine systems detailed in the book Promoters continue to flood schools with technology and its still unfulfilled promise of cutting edge personalized learning Meanwhile they continue as well their insatiable pursuit of federal funding educational legitimacy corporate profits and access to student subjects and their accumulated learning data for product development Less understood though is a companion enterprise there from the start to replace teaching and learning in traditional classrooms by efficient automated systems that manage and monitor human cognition and learning for high performance systems from weapons systems to high tech corporations As education is moved imperceptibly away from its traditional humanistic aims and from the classroom itself the goal of this human engineering project the depersonalized accumulation of cognitive components for a 21st century militarized economy best befits the book s original title The Human Arsenal This ongoing military corporate sponsored enterprise continues to impact education today largely unnoticed One example is the federally funded Advanced Distributed Learning Initiative ADL which has been a major force behind the implementation of electronic learning systems now used in all Defense Department and federal employee training With the Defense Advanced Research Project Agency ARPA ADL is developing structures to capture students soft skills and the Army Research Laboratory is developing intelligent tutoring systems to enable instructional management of affect engagement and grit perseverance ADL through the Department of Defense has developed Experience API a learning technology that can monitor all student online and offline interactions and archive these in date lockers or learning record stores ADL has already impacted thousands of school districts through nonprofits such as IMS Global and Future Ready Schools part of an industry massively subsidized by high tech corporations and valued at 255 billion annually A 90 million Advanced Research Projects Agency for Education ARPA ED modeled after the military s ARPA has been proposed to fund dramatic breakthroughs in learning and teaching These include digital tutors as effective as personal tutors and with the Navy s Full Spectrum Learning project data collection tools for personalized education modeled after corporate data analysis that identifies consumer patterns and preferences ADL is just one example of how the military corporate ed tech enterprise is changing public education by hollowing it out into something that can be digitized data driven automated and monitored Its promoters envision education as children interacting with online learning systems where based on past performance algorithms will serve up what each student needs to know next Through this digital curriculum students create virtual educational identities at very young ages and learning devices are watching students as much as students are watching them Such is the education landscape presaged by The Classroom Arsenal a quarter century ago whose origins and trajectories need to be deeply understood now more than ever Iames B. They are steadily replacing both human judgment and explicitly programmed software In best selling author Brian Christian's riveting account we meet the alignment problem s first responders and learn their ambitious plan to solve it before our hands are completely off the wheel In a masterful blend of history and on the ground reporting Christian traces the explosive growth in the field of machine learning and surveys its current sprawling frontier Readers encounter a discipline finding its legs amid exhilarating and sometimes terrifying progress Whether they and we succeed or fail in solving the alignment problem will be a defining human story The Alignment Problem offers an unflinching reckoning with humanity s biases and blind spots our own
