Meshfree Methods For Partial Differential Equations II:

Meshfree Methods for Partial Differential Equations II Michael Griebel, Marc Alexander Schweitzer, 2006-09-21 The numerical treatment of partial differential equations with particle methods and meshfree discretization techniques is a very active research field both in the mathematics and engineering community Due to their independence of a mesh particle schemes and meshfree methods can deal with large geometric changes of the domain more easily than classical discretization techniques Furthermore meshfree methods offer a promising approach for the coupling of particle models to continuous models This volume of LNCSE is a collection of the papers from the proceedings of the Second International Workshop on Meshfree Methods held in September 2003 in Bonn The articles address the different meshfree methods SPH PUM GFEM EFGM RKPM etc and their application in applied mathematics physics and engineering The volume is intended to foster this new and exciting area of interdisciplinary research and to present recent advances and results in this field

Meshfree Methods for Partial Differential Equations Michael Griebel, Marc A. Schweitzer, 2012-12-06 Meshfree methods for the solution of partial differential equations gained much attention in recent years not only in the engineering but also in the mathematics community One of the reasons for this development is the fact that meshfree discretizations and particle models are often better suited to cope with geometric changes of the domain of interest e g free surfaces and large deformations than classical discretization techniques such as finite differences finite elements or finite volumes Another obvious advantage of meshfree discretizations is their independence of a mesh so that the costs of mesh generation are eliminated Also the treatment of time dependent PDEs from a Lagrangian point of view and the coupling of particle models and continuous models gained enormous interest in recent years from a theoretical as well as from a practical point of view This volume consists of articles which address the different meshfree methods SPH PUM GFEM EFGM RKPM etc and their application in applied mathematics physics and engineering

Michael Griebel, Marc Alexander Schweitzer, 2008-10-16 The numerical treatment of partial differential equations with particle methods and meshfree discretization techniques is a active research field both in the mathematics and engineering community This volume of LNCSE is a collection of the proceedings papers of the Fourth International Workshop on Meshfree Methods held in September 2007 in Bonn **Meshfree Methods for Partial Differential Equations VII**

Michael Griebel, Marc Alexander Schweitzer, 2014-12-02 Meshfree methods particle methods and generalized finite element methods have witnessed substantial development since the mid 1990s The growing interest in these methods is due in part to the fact that they are extremely flexible numerical tools and can be interpreted in a number of ways For instance meshfree methods can be viewed as a natural extension of classical finite element and finite difference methods to scattered node configurations with no fixed connectivity Furthermore meshfree methods offer a number of advantageous features which are especially attractive when dealing with multiscale phenomena a priori knowledge about particular local behavior of the solution can easily be introduced in the meshfree approximation space and coarse scale approximations can be seamlessly refined with fine scale information This volume collects selected papers presented at the Seventh International Workshop on Meshfree Methods held in Bonn Germany in September 2013 They address various aspects of this highly dynamic research field and cover topics from applied mathematics physics and engineering Meshfree Methods for Partial Differential Equations IV
