Meta Level Control For Deductive Databases:

Meta-Level Control for Deductive Database Systems Helmut Schmidt, 1991 The development of database technology has currently reached the stage of deductive database systems which use Horn clauses for defining relations An important characteristic of these systems is the clear separation of logic and control However the programmer cannot affect the control part of a deductive database system To eliminate this deficiency this monograph presents a so called expert deductive database system that allows explicit control of the deduction process The system consists of an object level describing the logical aspects of a problem and of a meta level that contains application specific control information affecting the object level deduction process For example object level rules can be disregarded and some tuples deduced at the object level can be preferred to others Besides the architecture of this system the book also identifies some important possibilities of deduction control which are explained by characteristic examples

Perspectives of System Informatics Dines Bjørner, Manfred Broy, Igor V. Pottosin, 1996-12-04 This book constitutes the refereed post conference proceedings of the Second International Andrei Ershov Memorial Conference on System Informatics held in Akademgorodok Novosibirsk Russia in June 1996 The 27 revised full papers presented together with 9 invited contributions were thoroughly refereed for inclusion in this volume The book is divided in topical sections on programming methodology artificial intelligence natural language processing machine learning dataflow and concurrency models parallel programming supercompilation partial evaluation object oriented programming semantics and abstract interpretation programming and graphical interfaces and logic programming

A Unified Approach to Interior Point Algorithms for Linear Complementarity Problems Masakazu Kojima, N. Megiddo, T. Noma, Akiko Yoshise, 1991-09-25 Following Karmarkar's 1984 linear programming algorithm numerous interior point algorithms have been proposed for various mathematical programming problems such as linear programming convex quadratic programming and convex programming in general This monograph presents a study of interior point algorithms for the linear complementarity problem LCP which is known as a mathematical model for primal dual pairs of linear programs and convex quadratic programs A large family of potential reduction algorithms is presented in a unified way for the class of LCPs where the underlying matrix has nonnegative principal minors P0 matrix This class includes various important subclasses such as positive semi definite matrices P matrices P matrices introduced in this monograph and column sufficient matrices The family contains not only the usual potential reduction algorithms but also path following algorithms and a damped Newton method for the LCP The main topics are global convergence global linear convergence and the polynomial time convergence of potential reduction algorithms included in the family

Building a Deductive Database Miguel Nussbaum, 1992 This text illustrates the main issues and concepts behind deductive databases through the description of a real system Both theory and practice combine to advance a pragmatic approach The book covers all related topics from basic theory to its coupling with a known database management system and its implementation on a commercial multiprocessor An

overview describes the problems related to the field In the introduction basic tools and references to related work give the necessary background context Chapter two slowly begins building the concepts that finally lead to the kern algorithm used throughout the book mixed top down bottom up computation Upon completion of the book the reader should be able to build a deductive database Implementation problems are exposed and solved and new strategies and algorithms with their performance behaviour are presented Additionally the reader should also learn the benefits and drawbacks of working with an existing database and the usefulness of a parallel machine

Computational Geometry - Methods, Algorithms and Applications Hanspeter Bieri,1991-11-13 Radiocarbon After Four Decades An Interdisciplinary Perspective commemorates the 40th anniversary of radiocarbon dating The volume presents discussions of every aspect of this dating technique as well as chronicles of its development and views of future advancements and applications All of the 64 authors played major roles in establishment development or application of this revolutionary scientific tool The 35 chapters provide a solid foundation in the essential topics of radiocarbon dating Historical Perspectives The Natural Carbon Cycle Instrumentation and Sample Preparation Hydrology Old World Archaeology New World Archaeology Earth Sciences and Biomedical Applications

Do the Right Thing Stuart Jonathan Russell,Eric Wefald,1991 Like Mooki the hero of Spike Lee s film Do the Right Thing artificially intelligent systems have a hard time knowing what to do in all circumstances Classical theories of perfect rationality prescribe the right thing for any occasion but no finite agent can compute their prescriptions fast enough In Do the Right Thing the authors argue that a new theoretical foundation for artificial intelligence can be constructed in which rationality is a property of programs within a finite architecture and their behaviour over time in the task environment rather than a property of individual decisions

Algebraic Specification Techniques in Object Oriented Programming Environments Ruth Breu,1991-12-04 The main aim of this monograph is to provide a framework for the integrated design of object oriented programs with algebraic specification techniques The design method pursued relies fundamentally on the structuring of systems based on the notion of data types Depending on the level of abstraction data types are described in an object oriented way by algebraic specifications or by machine executable object oriented programs The treatment involves two main aspects First object oriented programs have to be related by a notion of correctness that models the transition from specifications to program implementations The author presents a notion of correctness which relies on the idea of abstraction functions Second in order to obtain an integrated design environment a uniform structuring concept for object oriented programs and algebraic specifications has to be provided Inheritance subtyping and clientship are three central notions of object oriented structuring Theauthor uses them to develop the kernel of a typed object oriented programming language The monograph provides the formal foundation for a unified framework of algebraic specifications and object oriented programs A major guideline is the development of a design method supporting the structured design and reuse of software in this environment

Symbolic and Quantitative Approaches to Uncertainty Rudolf Kruse,Pierre

Siegel,1991-10 A variety of formalisms have been developed to address such aspects of handling imperfect knowledge as uncertainty vagueness imprecision incompleteness and partial inconsistency Some of the most familiar approaches in this research field are nonmonotonic logics modal logics probability theory Bayesian and non Bayesian belief function theory and fuzzy sets and possibility theory ESPRIT Basic Research Action 3085 entitled Defeasible Reasoning and Uncertainty Management Systems DRUMS aims to contribute to the elucidation of similarities and differences between these formalisms It consists of 11 active European research groups The European Conference on Symbolic and Quantitative Approaches to Uncertainty ESQAU provides a forum for these groups to meet and discuss their scientific results This volume contains 42 contributions accepted for the ESQAU meeting held in October 1991 in Marseille together with 12 articles presenting the activities of the DRUMS groups and two invited presentations

Computer Systems and Software Engineering Patrick DeWilde,Joos P.L. Methods of Programming M. Broy,1991 The systematic development of software systems is a central task of computing science A software system is the result of putting together knowledge about the application the requirements and the structures of computing science Under the heading CIP Computer aided Intuition guided Programming a group of researchers led by Prof F L Bauer and Prof K Samelson started work in 1975 in the direction of formal program specification transformational programming and tool supportfor program development The collection of papers in this volume presents examples of a formal approach to programming language concepts and program development based on algebraic specifications and program transformations Examples are also presented of evolutions and modifications of the original ideas of the CIP project The topics range from descriptions of the program development process to derivations of algorithms from specifications The volume is dedicated to Prof F L Bauer PUBLISHER S WEBSITE
