## **Metacognition Core Readings:**

*Metacognition* Thomas O. Nelson, 1992      *Metacognition* John Dunlosky, Janet Metcalfe, 2008-09-24 Metacognition is the first textbook to focus on people's extraordinary ability to evaluate and control their cognitive processes. This comprehensive text covers both theoretical and empirical metacognitive research in educational, developmental, cognitive, and applied psychology. Authors John Dunlosky and Janet Metcalfe address many of the key questions that have inspired scientists to pursue research in this domain. To answer these and many other questions, the authors assess major theoretical themes and programmatic research in the field. The authors also include chapters that define the scope of metacognition and cover its historical origins. Not only do they describe well-received theories about the nature of metacognition, but they also highlight unresolved mysteries currently on the cutting edge of research. Key Features: Emphasizes the practical relevance of theory and research in metacognition to learning with the use of Application boxes. Introduces students to important questions that have yet to be answered by the metacognitive research literature with the inclusion of Mystery boxes. Provides three easy-to-conduct demonstrations, e.g., tip-of-the-tongue experience, delayed judgment of learning effect, etc., that students can try themselves. Offers brief biographies that introduce students to some of the most influential leaders in metacognition. Includes a general summary at the end of each chapter. Intended Audience: This text is an ideal resource for undergraduate cognitive psychology students. It also serves as a comprehensive handbook for more advanced students and psychological scientists engaged in the study of metacognitive processes.

*The MIT Encyclopedia of the Cognitive Sciences (MITECS)* Robert A. Wilson, Frank C. Keil, 2001-09-04 Since the 1970s, the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition. The MIT Encyclopedia of the Cognitive Sciences (MITECS) is a landmark comprehensive reference work that represents the methodological and theoretical diversity of this changing field. At the core of the encyclopedia are 471 concise entries from Acquisition and Adaptationism to Wundt and X-bar Theory. Each article, written by a leading researcher in the field, provides an accessible introduction to an important concept in the cognitive sciences, as well as references or further readings. Six extended essays, which collectively serve as a roadmap to the articles, provide overviews of each of six major areas of cognitive science: Philosophy, Psychology, Neurosciences, Computational Intelligence, Linguistics, and Language and Culture, Cognition and Evolution. For both students and researchers, MITECS will be an indispensable guide to the current state of the cognitive sciences.

**The Oxford Handbook of Reciprocal Adult Development and Learning** Carol Hoare, 2011-09-06 One of the Best Books of 2011 from the Center for Optimal Adult Development. The fields of adult development and the study of learning have traditionally been considered separate, with development falling under psychology and learning under education. However, recent ideas, research, and practices that have emerged in these fields of study effectively emphasize the inherent reciprocal relationship that exists between them. Advances in development frequently lead to learning, and conversely, learning almost necessarily fuels development. In this second edition of *The Oxford*

Handbook of Reciprocal Adult Learning and Development the synchronicity between development and learning is explored further as expert authors advance the latest theories to provide a rich foundation for this new area of study and practice for this interrelated field of study At the border of two disciplines this handbook focuses on the capacities of intelligence meta cognition insight self efficacy spirituality interpersonal competence wisdom and other key adult attributes as they relate to positive changes and personal growth in adults Contexts for development and learning e g the work role and environment are also addressed and mixed in throughout the volume are emanating implications for research practice and policy What emerges is a thoughtful handbook for all who promote optimal aging and is a must read for academics psychologists and practitioners in adult development

**Attention and Performance XVII** Daniel Gopher, Asher Koriat, 1999 In 1966 the first meeting of the Association for the Study of Attention and Performance was held in the Netherlands to promote the emerging science of cognitive psychology This volume is based on the most recent conference held in Israel thirty years later The focus of the conference was the interaction between theory and application The organizers chose the specific topic cognitive regulation of performance because it is an area where contemporary theories of cognitive processes meet the everyday challenges posed by human interactions with complex systems Present day technological systems impose on the operator a variety of supervisory functions such as input and output monitoring allocation of cognitive resources choice of strategies and regulation of cognitive operations A challenge for engineers and designers is to accommodate the cognitive requirements called for by these systems The book is divided into four sections the presentation and representation of information cognitive regulation of acquisition and performance consciousness and behavior and special populations aging and neurological disorders Contributors Nicole D Anderson Moshe Bar Lynn Bardell Alice E Barnes Irving Biederman Robert A Bjork Richard A Block Fergus I M Craik Heiner Deubel John Dunlosky Ido Erev Ronald Fisher John M Flach Barry Goettl Morris Goldsmith Daniel Gopher Lynn Hasher Okihide Hikosaka Larry L Jacoby Peter Kalocsai Colleen Kelley David E Kieras Roberta Klatzky Asher Koriat Arthur F Kramer Elisabetta Ladavas John L Larish Susan J Lederman John Long Cynthia P May Guiliانا Mazzoni Brian McElree David Meyer Satoru Miyauchi Neville Moray Louis Narens Thomas O Nelson Raymond S Nickerson Lynne Reder J Wesley Regian Ian Robertson Wolfgang Schneider Christian D Schunn Wayne Shebilske Shinsuke Shimojo Suresh Subramaniam Tom N Trainham Jehoshua Tsal Timothy A Weber Christopher Wickens Rose T Zacks Dan Zakay

**Trends and Prospects in Metacognition Research** Anastasia Efklides, Plousia Misailidi, 2010-09-08 Trends and Prospects in Metacognition presents a collection of chapters dealing principally with independent areas of empirical Metacognition research These research foci such as animal metacognition neuropsychology of metacognition implicit learning metacognitive experiences metamemory young children s Metacognition theory of mind metacognitive knowledge decision making and interventions for the enhancement of metacognition have all emerged as trends in the field of metacognition Yet the resulting research has not converged precluding an integration of concepts and findings Presenting a new theoretical

framework Trends and Prospects in Metacognition extends the classical definitions offered by Flavell and Nelson to carry the prospect of more integrated work into the future By opening the possibility to cross the boundaries posed by traditionally independent research areas this volume provides a foundation for the integration of research paradigms and concepts and builds on the relationship between metacognition and consciousness while integrating basic with applied research

**Metacognition and Cognitive Neuropsychology** Giuliana Mazzoni, Thomas O. Nelson, 2014-05-12 Control processes are those mental functions that allow us to initiate monitor and prioritize mental activities They are crucial to normal mental functioning A better understanding of the nature of control processes and their deficits is important for clinical work and for an adequate theory of consciousness Previously control processes have been examined within the frameworks of two parallel but independent paradigms those of cognitive psychology and of neuropsychology Cognitive psychologists have stressed the theoretical and empirical nature of normal unimpaired control processes neuropsychologists have focused on the relationships between damage to specific functional areas of the brain and deficits in specific control processes Both have contributed extensively to our understanding of control processes However they have tended to operate independently with little if any cross talk between disciplines despite the potential benefits such dialogue is likely to generate This book represents the first attempt to synthesize cognitive and neuropsychological perspectives on control processes It contains state of the art reports on various aspects of control processes by experts from both disciplines **Treatise on the**

**Neurophilosophy of Consciousness** Dr. Angell O. de la Sierra, 2012-08-15 I would like to invite all those studios of the mind brain interface puzzle to share our insights What follows represents an ongoing series of reflections on the ontology of consciousness based on some intuitions on life language acquisition and survival strategies to accommodate the biological psychic and social imperatives of human life in its ecological niche thus the BPS model For the latest publication click on BPS Model <http://www.delaSierraSheffer.net/IDNeurophilo.net/index.htm> [The Oxford Companion to Consciousness](#) Tim

Bayne, Axel Cleeremans, Patrick Wilken, 2009 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges How does the brain's activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise

entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best

characterization of a particular phenomenon **Time Perspective** Aleksandra Kostić, Derek Chadee, 2017-11-29 This book focusses on the theory and application of time perspective theory Time perspective can be an important factor in determining psychological well being and the way we see our world and others around us The unique contemporary nature of this theory's evolution has spurred great interest over the last 20 years The editors responded to this interest by bringing together contributors across a multitude of subjects and perspectives to facilitate an unprecedented discussion on the topic covering areas such as financial health psychotherapy across adulthood and old age prenatal past metacognition community and change fear of crime and intrinsic motivations The interdisciplinary nature of this project makes it of interest to a wide cross section of academics and practitioners including psychologist social workers criminologists and anyone who has or wishes to adopted time perspective theorization to assist them in their understanding
