Metal Vapour Lasers Christopher E. Little, 1999-03-12 Metal Vapour Lasers Christopher E Little University of St Andrews St Andrews Scotland Since the first successful demonstration of a metal vapour laser MVL in 1962 this class of laser has become widely used in a broad range of fields including precision materials processing isotope separation and medicine The MVLs that are used today have a range of impressive characteristics that are not readily available using other technologies In particular the combination of high average output powers pulse recurrence frequencies and beam quality available from green yellow Cu vapour lasers CVLs and Cu bromide lasers coupled with the high quality multiwatt ultraviolet 265 289 nm radiation that can be produced using simple nonlinear optical techniques means that Cu lasers will continue to be important for many years Metal Vapour Lasers covers all the most commercially important and scientifically interesting pulsed and continuous wave CW gas discharge MVLs and includes device histories operating characteristics engineering kinetics commercial exploitation and applications Short descriptions of gas discharges and excitation techniques make this volume self consistent A comprehensive bibliography is also provided The greater part of this book is devoted to CVLs and their variants including new sealed off high power kinetically enhanced CVLs and Cu bromide lasers However many other self terminating MVLs are also discussed including the red AuVL green infrared MnVL and infrared BaVL Pulsed high gain high average power lasers in the UV violet 373 7 430 5 nm spectral regions are represented by Sr and Ca discharge afterglow recombination lasers The most commercially successful of the MVLs the CW UV blue cathodoluminescent He Cd ion laser is described Hollow cathode lasers are represented in two guises white light blue green red He Cd ion lasers and UV infrared Ne He Cu ion lasers This unique volume is an essential reference source for all those working
