Metal Forming Plasticity:

Theory of Metal Forming Plasticity Andrzej Sluzalec, 2013-04-17 The intention of this book is to reveal and discuss some aspects of the metal forming plasticity theory The modern theory describes deformation of metallic bodies in cold and hot regimes under combined thermal and mechanical loadings Thermal and deformation fields appear in metal forming in various forms A thermal field influences the material properties modifies the extent of plastic zones etc and the deformation of metallic body induces changes in temperature distribution The thermal effects in metal forming plasticity can be studied at two levels pending on whether uncoupled or coupled theories of thermo plastic response have to be applied A majority of metal forming processes can be satisfactorily studied within an uncoupled theory In such an approach the temperature enters the stress strain relation through the material constants and through the thermal dilatation The description of thermo plastic deformation in metal forming is carried out on the ground of thermodynamics
