Metal Containing Polymeric Systems:

Metal-Containing Polymeric Systems John E. Sheats, Charles E. Carraher Jr., Charles U. Pittman, 2012-12-06 Research on metal containing polymers began in the early 1960 s when several workers found that vinyl ferrocene and other vinylic transition metal complexes would undergo polymerization under the same conditions as conventional organic monomers to form high polymers which incorporated a potentially reactive metal as an integral part of the polymer structures Some of these materials could act as semi conductors and possessed one or two dimensional conductivity Thus applications in electronics could be visualized immediately Other workers found that reactions used to make simple metal chelates could be used to prepare polymers if the ligands were designed properly As interest in homogeneous catalysts developed in the late 60 s and early 70 s several investigators began binding homogeneous catalysts onto polymers where the advantage of homogeneous catalysis known reaction mechanisms and the advantage of heterogeneous catalysis simplicity and ease of recovery of catalysts could both be obtained Indeed the polymer matrix itself often enhanced the selectivity of the catalyst

Metal-Polymer Systems Jörg Florian Friedrich, 2017-12-04 The result of decades of research by a pioneer in the field this is the first book to deal exclusively with achieving high performance metal polymer composites by chemical bonding Covering both the academic and practical aspects the author focuses on the chemistry of interfaces between metals and polymers with a particular emphasis on the chemical bonding between the different materials He elucidates the various approaches to obtaining a stable interface including but not limited to thermodynamically driven redox reactions bond protection to prevent hydrolysis the introduction of barrier layers and stabilization by spacer molecules Throughout chemical bonding is promoted as a simple and economically viable alternative to adhesion based on reversible weak physical interaction Consequently the text equips readers with the practical tools necessary for designing high strength metal polymer composites with such desired properties as resilience flexibility rigidity or degradation resistance

Frontiers in Transition Metal-Containing Polymers Alaa S. Abd-El-Aziz, Ian Manners, 2006-10-25 A detailed up to date review of transition metal containing polymers Promising advances in the electrical optical magnetic biological and catalytic properties that metal containing polymers possess have led to notable expansion in the field of transition metal containing polymers *Frontiers in Transition Metal Containing Polymers* provides a comprehensive up to date review of the synthesis properties and applications of transition metal containing polymers including an overview of the historical development of these types of polymers Written by the leading researchers in the field this thorough volume covers the routes to organometallic and coordination polymers as well as characterization and applications of transition metal containing monomers and polymers Other topics discussed include Metallo supramolecular coordination polymers based on nitrogen ligands Coordination polymers based on phosphorus ligands Polypeptide based metallobiopolymers and DNA based metallopolymer Metallo dendrimers Self assembly of metal containing block copolymers Applications including drug delivery optics molecular devices sensors conductive materials and

more *Bioactive Polymeric Systems* Charles G. Gebelein, Charles E. Carraher, 2012-12-06 The vast array of libraries in the world bear mute witness to the truth of the 3000 year old observation of King Solomon who stated of making many books there is no end and much study is a weariness of the flesh Yet books are an essential written record of our lives and the progress of science and humanity Here is another book to add to this huge collection but hopefully not just another collection of pages but rather a book with a specific purpose to aid in alleviating the weariness of the flesh that could arise from much studying of other journals and books in order to obtain the basic information contained herein This book is about polymeric materials and biological activity as the title notes Polymeric materials in the broad view taken here would include not only synthetic polymers e g polyethylene polyvinyl chloride polyesters polyamides etc but also the natural macromolecules e g proteins nucleic acids polysaccharides which compose natural tissues in humans animals and plants In the broad sense used here biological activity is any type of such action whether it be in medication pest control plant growth regulation and so on In short this book attempts to consider briefly the use of any type of polymeric material system with essentially any kind of biological activity

Molecular Design and Applications of Photofunctional Polymers and Materials Wai-Yeung Wong, Alaa S Abd-El-Aziz, 2012-09-30 Functional organic and organometallic polymers and materials have gained much attention as versatile materials for energy interconversions and optoelectronic photonic applications including electrical energy generation in photovoltaic cells and light generation in organic light emitting diodes as they offer a low cost light weight and simple option for device fabrication Molecular Design and Applications of Photofunctional Polymers and Materials presents a critical perspective of the current

field with emphasis on fundamental concepts and current applications in optoelectronics electronics and nanotechnology The book also covers photochemically degradable polymers electrochromic and photochromic materials biosensing and bioimaging materials and low and high refractive index materials With contributions from leading experts in the field this timely book will provide a valuable contribution to the community enabling new synthetic methods to be developed to produce new materials with specific functional roles High-Performance Polymers for Engineering-Based Composites Omari V. Mukbaniani, Marc J. M. Abadie, Tamara Tatrishvili, 2015-12-23 High Performance Polymers for Engineering Based Composites presents a selection of investigations and innovative research in polymer chemistry and advanced materials The book includes case studies in the field of nanocomposites The volume provides coverage of new research in polymer science and engineering with applications in chemical engineerin **Polymer Gels and Networks** Yoshihito Osada, Alexei Khokhlov, 2001-12-12 This text offers an in depth look at the properties thermodynamic formation structure latest trends and scientific application of bio and synthetic polymer gels Inorganic Reactions and Methods, Oligomerization and Polymerization Formation of Intercalation Compounds A. P. Hagen, 2009-09-17 For the first time the discipline of modern inorganic chemistry has been systematized according to a plan constructed by a council of editorial advisors and consultants among them three Nobel laureates E O Fischer H Taube and G Wilkinson Rather than producing a collection of unrelated review articles the series creates a framework which reflects the creative potential of this scientific discipline Thus it stimulates future development by identifying areas which are fruitful for further research The work is indexed in a unique way by a structured system which maximizes its usefulness to the reader It augments the organization of the work by providing additional routes of access for specific compounds reactions and other topics
