Metallurgical Effects at High Strain Rates R. Rohde, 2012-12-06 A conference on Metallurgical Effects at High Strain Rates was held at Albuquerque New Mexico February 5 through 8 1973 under joint sponsorship of Sandia Laboratories and the Physical Metallurgy Committee of The Metallurgical Society of AIME This book presents the written proceedings of the meeting The purpose of the conference was to gather scientists from diverse disciplines and stimulate interdisciplinary discussions on key areas of materials response at high strain rates In this spirit it was similar to one of the first highly successful conferences on this subject held in 1960 in Estes Park Colorado on The Response of Metals to High Velocity Deformation The 1973 conference was able to demonstrate rather directly the increased understanding of high strain rate effects in metals that has evolved over a period of roughly 12 years In keeping with the interdisciplinary nature of the meeting the first day was devoted to a tutorial session of invited papers to provide attendees of diverse backgrounds with a common basis of understanding Sessions were then held with themes centered around key areas of the high strain rate behavior of metals

Shock Waves and High-Strain-Rate Phenomena in Metals Mare Meyers,2012-12-06 The scientific understanding of high velocity deformation has advanced substantially during the past decade On the one hand the framework for a theory explaining the metallurgical effects of shock waves is beginning to take shape on the other hand the technological applications of high strain rate processes have found their way into industries in countries around the world Explosive cladding welding forming compaction and consolidation cutting and hardening in addition to high energy rate deformation processes using other energy sources are some of the topics of contemporary technological importance Metallurgical effects are of the utmost importance in both the scientific understanding of the phenomena involved and in the successful development and utilization of the associated applications The international conference upon which this book is based had as its major objectives the acceleration of progress in the field of high strain rate deformation and fabrication including applications by providing a forum for the exchange of state of the art information on the metallurgical effects of high strain rate deformation and fabrication and the organization of this information into a timely and coherent body of knowledge focused around significant areas and applications This volume is a manifestation of these objectives In addition the contents of this book were organized to provide for a somewhat logical perspective of the fundamentals development and state of the art applications of high strain rate and shock phenomena Metallurgical Effects at High Strain Rates; [proceedings of a Technical Conference] Edited by R. W. Rohde [and Others]. , **Nuclear Science Abstracts** ,1975 High-Pressure Shock Compression of Solids J.R. Asay,M. Shahinpoor,2012-12-06 This book presents a set of basic understandings of the behavior and response of solids to propagating shock waves The propagation of shock waves in a solid body is accompanied by large compressions decompression and shear Thus the shear strength of solids and any inelastic response due to shock wave propagation is of the utmost importance Furthermore shock compression of solids is always accompanied by heating and the rise of local temperature which may be due to both compression and dissipation For many solids under a certain range of impact pressures a two wave structure arises such that the first wave called the elastic precursor travels with the speed of sound and the second wave called a plastic shock wave travels at a slower speed Shock wave loading of solids is normally accomplished by either projectile impact such as produced by guns or by explosives The shock heating and compression of solids covers a wide range of temperatures and densities For example the temperature may be as high as a few electron volts 1 eV 11 500 K for very strong shocks and the densification may be as high as four times the normal density
