Deformation of Ceramic Materials II Richard E. Tressler, Richard C. Bradt, 2012-12-06 This volume constitutes the proceedings of an international symposium held at The Pennsylvania State University University Park PA on July 20 21 and 22 1983 It includes studies of semiconductors and minerals which are closely related to ceramic materials The initial conference on this topic was held in 1974 at Penn State and the proceedings were published in the volume entitled Deformation of Ceramic Materials This conference emphasized the deformation behavior of crystals and polycrystalline and polyphase ceramics with internationally recognized authorities as keynote lecturers on the major subtopics Several papers dealing with cavity nucleation and creep crack growth represent a major new research thrust in ceramics since the first conference This collection of papers represents the state of the art of our understanding of the plastic deformation behavior of ceramics and the crystals of which they are composed We are grateful for the suggestions of our International Advisory Committee in recommending experts in their respective countries to participate We are particularly grateful that the organizers of the previous Dislocation Point Defect Interaction Workshops agreed to participate in the Penn State Symposium as an alternative at the suggestion of Prof A H Heuer We acknowledge the financial support of the National Science Foundation for this conference

Fundamentals of Ion-Irradiated Polymers Dietmar Fink, 2013-03-14 Presented in two parts this first comprehensive overview addresses all aspects of energetic ion irradiation of polymers Earlier publications and review articles concentrated on selected topics only And the need for such a work has grown with the dramatic increase of research and applications such as in photoresists waveguides and medical dosimetry during the last decade The first part Fundamentals of Ion Irradiated Polymers covers the physical chemical and instrumental fundamentals treats the specific irradiation mechanisms of low and high energy ions including similarities and differences and details the potential for future technological application All the new findings are carefully analyzed and presented in a systematic way while open questions are identified The second volume Transport Processes in Ion Irradiated Polymers deals with transport processes in both unirradiated and irradiated polymers As both a review and a stimulus this work seeks to contribute substantially to the literature and advancement of polymeric devices from both the low and high energy regimes
