The Chemistry of the Actinide and Transactinide Elements (3rd ed., Volumes 1-5) L.R. Morss, Norman M. Edelstein, Jean Fuger, 2007-12-31 The Chemistry of the Actinide and Transactinide Elements is a contemporary and definitive compilation of chemical properties of all of the actinide elements especially of the technologically important elements uranium and plutonium as well as the transactinide elements In addition to the comprehensive treatment of the chemical properties of each element ion and compound from atomic number 89 actinium through to 109 meitnerium this multi volume work has specialized and definitive chapters on electronic theory optical and laser fluorescence spectroscopy X ray absorption spectroscopy organoactinide chemistry thermodynamics magnetic properties the metals coordination chemistry separations and trace analysis Several chapters deal with environmental science safe handling and biological interactions of the actinide elements The Editors invited teams of authors who are active practitioners and recognized experts in their specialty to write each chapter and have endeavoured to provide a balanced and insightful treatment of these fascinating elements at the frontier of the periodic table Because the field has expanded with new spectroscopic techniques and environmental focus the work encompasses five volumes each of which groups chapters on related topics All chapters represent the current state of research in the chemistry of these elements and related fields Disposal of Weapon Plutonium E.R. Merz, Carl E. Walter, 1995-12-31 This NATO Advanced Research Workshop on Disposal of Weapons Plutonium is a follow up event to two preceding workshops each dealing with a special subject within the overall disarmament issue Disposition of Weapon Plutonium sponsored by the NATO Science Committee The first workshop of this series was held at the Royal Institute of International Affairs in London on 24 25 January 1994 entitled Managing the Plutonium Surplus Applications and Options Its over all goal was to clarify the current situation with respect to plutonium characteristics and availability the technical options for use or disposal and their main technical environmental and economic constraints In the immediate term plutonium recovered from dismantled nuclear warheads will have to be stored securely and under international safeguards if possible In the intermediate term the principal alternatives for disposition of this plutonium are irradiation in mixed oxide MOX fuel assemblies in existing commercial light water reactors or in specially adapted light water reactors capable of operation with full cores of MOX fuel and irradiation in future fast reactors Another option is to blend plutonium with high level waste as it is vitrified for final disposal in a geologic repository In both cases the high radioactivity of the resulting products provides self shielding and prevents separation of plutonium without already developed and available sophisticated technology The so called spent fuel standard as an effective protection barrier is required in either case *Selected Water Resources Abstracts* ,1973 Power Plants and Power Systems Control 2003 Kwang Y Lee, Myong-Chul Shin, 2004-04 Approx 422 pages **Handbook of Food Analysis - Two Volume Set** Leo M.L.
