Method Of Iterated Tangents With Applications In Local Riemannian Geometry:

The Method of Iterated Tangents with Applications in Local Riemannian Geometry James Enrico White, 1982 *The method of iterated tangents with applications in local Riemannian geometry* Jerry E. White, 1982 *Natural Operations in Differential Geometry* Ivan Kolar, Peter W. Michor, Jan Slovák, 2013-03-09 The aim of this work is threefold First it should be a monographical work on natural bundles and natural operators in differential geometry This is a field which every differential geometer has met several times but which is not treated in detail in one place Let us explain a little what we mean by naturality Exterior derivative commutes with the pullback of differential forms In the background of this statement are the following general concepts The vector bundle $A \otimes T^*M$ is in fact the value of a functor which associates a bundle over M to each manifold M and a vector bundle homomorphism over f to each local diffeomorphism f between manifolds of the same dimension This is a simple example of the concept of a natural bundle The fact that exterior derivative d transforms sections of $A \otimes T^*M$ into sections of $A \otimes T^*M$ for every manifold M can be expressed by saying that d is an operator from $A \otimes T^*M$ into $A \otimes T^*M$

Synthetic Geometry of Manifolds Anders Kock, 2010 This elegant book is sure to become the standard introduction to synthetic differential geometry It deals with some classical spaces in differential geometry namely prolongation spaces or neighborhoods of the diagonal These spaces enable a natural description of some of the basic constructions in local differential geometry and in fact form an inviting gateway to differential geometry and also to some differential geometric notions that exist in algebraic geometry The presentation conveys the real strength of this approach to differential geometry Concepts are clarified proofs are streamlined and the focus on infinitesimal spaces motivates the discussion well Some of the specific differential geometric theories dealt with are connection theory notably affine connections geometric distributions differential forms jet bundles differentiable groupoids differential operators Riemannian metrics and harmonic maps Ideal for graduate students and researchers wishing to familiarize themselves with the field

Differential Geometry R.W. Sharpe, 2000-11-21 Cartan geometries were the first examples of connections on a principal bundle They seem to be almost unknown these days in spite of the great beauty and conceptual power they confer on geometry The aim of the present book is to fill the gap in the literature on differential geometry by the missing notion of Cartan connections Although the author had in mind a book accessible to graduate students potential readers would also include working differential geometers who would like to know more about what Cartan did which was to give a notion of n -dimensional spaces G/H Cartan geometries generalizing homogeneous spaces Klein geometries in the same way that Riemannian geometry generalizes Euclidean geometry In addition physicists will be interested to see the fully satisfying way in which their gauge theory can be truly regarded as geometry *Models for Smooth Infinitesimal Analysis* Ieke Moerdijk, Gonzalo E. Reyes, 2013-03-14 The aim of this book is to construct categories of spaces which contain all the C^∞ manifolds but in addition infinitesimal spaces and arbitrary function spaces To this end the techniques of Grothendieck toposes and the logic inherent

to them are explained at a leisurely pace and applied By discussing topics such as integration cohomology and vector bundles in the new context the adequacy of these new spaces for analysis and geometry will be illustrated and the connection to the classical approach to C manifolds will be explained

Differential Geometry And Its Applications - International Conference Josef Janyška, Demeter Krupka, 1990-03-01 The proceedings consists of lectures and selected original research papers presented at the conference The contents is divided into 3 parts I Geometric structures II the calculus of variations on manifolds III Geometric methods in physics The volume also covers interdisciplinary areas between differential geometry and mathematical physics like field theory relativity classical and quantum mechanics

International Conference on Differential Geometry and Its Applications Josef Janyška, D. Krupka, 1990 **Bifurcation Theory, Mechanics and Physics**

C.P. Bruter, A. Aragnol, A. Lichnorowicz, 2001-11-30 This volume presents the proceedings of a colloquium inspired by the former President of the French Mathematical Society Michel Herve The aim was to promote the development of mathematics through applications Since the ancient supports the new it seemed appropriate to center the theoretical conferences on new subjects Since the world is movement and creation the theoretical conferences were planned on mechanics movement and bifurcation theory creation Five aspects of mechanics were to be presented but unfortunately it has not been possible to include the statistical mechanics aspect So that only four aspects are presented Classical mechanics Hamiltonian Lagrangian Poisson W N Tulczyjew J E White C M Marle Quantum mechanics in particular the passage from the classical to the quantum approach and the problem of finding the explicit solution of Schrodinger's equation M Cahen and S Gutt J Leray Fluid mechanics meaning problems involving partial differential equations One of the speakers we hoped would attend the conference was in Japan at the time however his lecture is presented in these proceedings J F Pommaret H I Shi Mathematical information theory S Guisil Traditional physical arguments are characterized by their great homogeneity and mathematically expressed by the compactness property In such cases there is a kind of duality between locality and globality which allows the use of the infinitesimal in global considerations
