Rational And Nearly Rational Varieties:

Rational and Nearly Rational Varieties János Kollár, Karen E. Smith, Alessio Corti, 2004-04-22 The most basic algebraic varieties are the projective spaces and rational varieties are their closest relatives In many applications where algebraic varieties appear in mathematics and the sciences we see rational ones emerging as the most interesting examples The authors have given an elementary treatment of rationality questions using a mix of classical and modern methods Arising from a summer school course taught by János Kollár this book develops the modern theory of rational and nearly rational varieties at a level that will particularly suit graduate students There are numerous examples and exercises all of which are accompanied by fully worked out solutions that will make this book ideal as the basis of a graduate course It will act as a valuable reference for researchers whilst helping graduate students to reach the point where they can begin to tackle contemporary research problems

Cremona Groups and the Icosahedron Ivan Cheltsov, Constantin Shramov, 2015-08-21 Cremona Groups and the Icosahedron focuses on the Cremona groups of ranks 2 and 3 and describes the beautiful appearances of the icosahedral group A_5 in them The book surveys known facts about surfaces with an action of A_5 explores A_5 equivariant geometry of the quintic del Pezzo threefold V_5 and gives a proof of its A_5 birational rigidity The author also discusses the **Classical Algebraic Geometry** Igor V. Dolgachev, 2012-08-16 Algebraic geometry has benefited enormously from the powerful general machinery developed in the latter half of the twentieth century The cost has been that much of the research of previous generations is in a language unintelligible to modern workers in particular the rich legacy of classical algebraic geometry such as plane algebraic curves of low degree special algebraic surfaces theta functions Cremona transformations the theory of apolarity and the geometry of lines in projective spaces The author's contemporary approach makes this legacy accessible to modern algebraic geometers and to others who are interested in applying classical results The vast bibliography of over 600 references is complemented by an array of exercises that extend or exemplify results given in the book

Riemannian Topology and Geometric Structures on Manifolds Krzysztof Galicki, Santiago R. Simanca, 2010-07-25 Riemannian Topology and Structures on Manifolds results from a similarly entitled conference held on the occasion of Charles P. Boyer's 65th birthday The various contributions to this volume discuss recent advances in the areas of positive sectional curvature Kähler and Sasakian geometry and their interrelation to mathematical physics especially M and superstring theory Focusing on these fundamental ideas this collection presents review articles original results and open problems of interest

Geometric Methods in Physics XXXV Piotr Kielanowski, Anatol Odziejewicz, Emma Previato, 2018-02-10 This book features a selection of articles

based on the XXXV Bioworkshop on Geometric Methods in Physics 2016 The series of Bioworkshops attended by a community of experts at the crossroads of mathematics and physics is a major annual event in the field The works in this book based on presentations given at the workshop are previously unpublished at the cutting edge of current research typically grounded in geometry and analysis and with applications to classical and quantum physics In 2016 the special session Integrability and Geometry in particular attracted pioneers and leading specialists in the field Traditionally the Bioworkshop is followed by a School on Geometry and Physics for advanced graduate students and early career researchers and the book also includes extended abstracts of the lecture series

Geometry of Higher Dimensional Algebraic Varieties Thomas Peternell, Joichi Miyaoka, 2012-12-06 This book is based on lecture notes of a seminar of the Deutsche Mathematiker Vereinigung held by the authors at Oberwolfach from April 2 to 8 1995 It gives an introduction to the classification theory and geometry of higher dimensional complex algebraic varieties focusing on the tremendous developments of the subject in the last 20 years The work is in two parts with each one preceded by an introduction describing its contents in detail Here it will suffice to simply explain how the subject matter has been divided Cum grano salis one might say that Part 1 Miyaoka is more concerned with the algebraic methods and Part 2 Peternell with the more analytic aspects though they have unavoidable overlaps because there is no clearcut distinction between the two methods Specifically Part 1 treats the deformation theory existence and geometry of rational curves via characteristic p while Part 2 is principally concerned with vanishing theorems and their geometric applications Part I Geometry of Rational Curves on Varieties Yoichi Miyaoka RIMS Kyoto University 606 01 Kyoto Japan Introduction Why Rational Curves This note is based on a series of lectures given at the Mathematisches Forschungsinstitut at Oberwolfach Germany as a part of the DMV seminar Mori Theory The construction of minimal models was discussed by T

Birational Geometry, Rational Curves, and Arithmetic Fedor Bogomolov, Brendan Hassett, Yuri Tschinkel, 2013-05-17 This book features recent developments in a rapidly growing area at the interface of higher dimensional birational geometry and arithmetic geometry It focuses on the geometry of spaces of rational curves with an emphasis on applications to arithmetic questions Classically arithmetic is the study of rational or integral solutions of diophantine equations and geometry is the study of lines and conics From the modern standpoint arithmetic is the study of rational and integral points on algebraic varieties over nonclosed fields A major insight of the 20th century was that arithmetic properties of an algebraic variety are tightly linked to the geometry of rational curves on the variety and how they vary in families This collection of solicited survey and research papers is intended to serve as an introduction for graduate students and researchers interested in entering the field and as a source of reference for experts working on related problems Topics that will be addressed include birational properties such as rationality unirationality and rational connectedness existence of rational curves in prescribed homology classes cones of rational curves on rationally connected and Calabi Yau varieties as well as related questions within the framework of the Minimal Model Program

Rationality Problems in Algebraic Geometry Arnaud Beauville, Brendan Hassett, Alexander Kuznetsov, Alessandro Verra, 2016-12-06 Providing an overview of the state of the art on rationality questions in algebraic geometry this volume gives an update on the most recent developments It offers a comprehensive introduction to this fascinating topic and will certainly become an essential reference for anybody working in the field Rationality problems are of fundamental importance both in algebra and algebraic geometry Historically rationality problems motivated significant developments in the theory of abelian integrals Riemann surfaces and the Abel Jacobi map among other areas and they have strong links with modern notions such as moduli spaces Hodge theory algebraic cycles and derived categories This text is aimed at researchers and graduate students in algebraic geometry

An Introduction to Random Matrices Greg W. Anderson, Alice Guionnet, Ofer Zeitouni, 2010 A rigorous introduction to the basic theory of random matrices designed for graduate students with a background in probability theory

Complex Topological K-Theory Efton Park, 2008-03-13 Topological K theory is a key tool in topology differential geometry and index theory yet this is the first contemporary introduction for graduate students new to the subject No background in algebraic topology is assumed the reader need only have taken the standard first courses in real analysis abstract algebra and point set topology The book begins with a detailed discussion of vector bundles and related algebraic notions followed by the definition of K theory and proofs of the most important theorems in the subject such as the Bott periodicity theorem and the Thom isomorphism theorem The multiplicative structure of K theory and the Adams operations are also discussed and the final chapter details the construction and computation of characteristic classes With every important aspect of the topic covered and exercises at the end of each chapter this is the definitive book for a first course in topological K theory

Automorphic Representations and L-Functions for the General Linear Group: Volume 2 Dorian Goldfeld, Joseph Hundley, 2011-04-21 This graduate level textbook provides an elementary exposition of the theory of automorphic representations and L functions for the general linear group in an adelic setting Definitions are kept to a minimum and repeated when reintroduced so that the book is accessible from any entry point and with no prior knowledge of representation theory The book includes concrete examples of global and local representations of GL_n and presents their associated L functions In Volume 1 the theory is developed from first principles for GL_1 then carefully extended to GL_2 with complete detailed proofs of key theorems Several proofs are presented for the first time including Jacquet's simple and elegant proof of the tensor product theorem In Volume 2 the higher rank situation of GL_n is given a detailed treatment Containing numerous exercises by Xander Faber this book will motivate students and researchers to begin working in this fertile field of research
