Reduction Of Photoelectric Observations:

Publications of the United States Naval Observatory United States Naval Observatory, 1971 **The Present and Future of the Telescope of Moderate Size** Frank Bradshaw Wood, 2016-11-11 Covering the astronomical work achieved with telescopes of moderate size this volume indicates how recent developments in electronics make it possible for these telescopes to cope with problems formerly attacked only by the largest instruments Because the future accomplishments of the telescopes of moderate size should be tremendously increased this book considers both what is being accomplished and what scientists may confidently expect to be able to do in the predictable future In searching for an appropriate topic for the symposium the astronomers who have contributed to this volume recognized that although much attention has been devoted in recent years to Schmidt type telescopes radio telescopes and very large instruments a great deal of the useful work has been and is being carried out by conventional telescopes of moderate size Especially in the fields of astrometry and photometry a rather large fraction of the observations are being made with telescopes within roughly an aperture range of twelve to forty inches Although perhaps the most exciting or novel results will be obtained with the giant reflectors much of our progress depends upon the unspectacular accumulation and discussion of data and within the limits of stellar magnitude to which they are suited the smaller instruments can contribute substantially meriting the definitive research provided in the pages of this book Outstanding scientists have contributed to this volume their findings in such matters as image tube development photoelectric problems in astronomy investigation of image detectors sensitivity assessment equivalent quantum efficiencies etc modern computing machines capable of solving photometric problems the Newton Lacy Pierce Photometer the infrared technique for stellar photometry application of the small telescope to photoelectric problems photoelectric studies of scintillation of starlight the upper atmosphere as discerned from studies of stellar scintillation variable star problems present and future and stellar spectroscopy with the moderate size telescope The result is a book of vital importance to the student of astronomy who wishes to understand the advances in his field made possible by electronic progress **Bulletin** Flagstaff (Ariz.). Lowell Observatory, 1960 **Bulletin** , 1962 **Publications** United States Naval Observatory, 1950 Bulletin Lowell Observatory, 1962 **Relativistic Astrophysics Gravity-Wave Astronomy** A. M. Esser, W. Fricke, U. Güntzel-Lingner, F. Henn, D. Krahn, H. Scholl, G. Zech, 2013-11-11 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average

time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 12 contains literature published in 1974 and received before March 15 1975 some older literature which was received late and which is not recorded in earlier volumes is also included Beginning with volume 11 some minor changes of our classification scheme have been made We acknowledge with thanks contributions to this volume by Dr J Bouska who surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Commonwealth Scientific and Industrial Research Organization CSIRO Sydney for providing titles and abstracts of papers on radio astronomy

Science with Astronomical Near-Infrared Sky Surveys N. Epchtein, A. Omont, W.B. Burton, P. Persi, 2012-12-06

Outstanding progress in near infrared detection technology and in real time image processing has led astronomers to start undertaking all sky surveys in the 1.2 μ m range project DENIS in Europe and 2MASS in the U S A surveys which will have a considerable impact in various areas of astronomy This book gathers the contributions of more than 80 specialists involved in fields of interest as different as low mass stars late stages of stellar evolution star formation stellar populations of the Galaxy and the Magellanic Clouds the local structure of the Universe and observational cosmology It describes the impact on these fields of the exhaustive data bases and catalogs of stars and galaxies that these surveys will provide The considerable interest of these documents for the future of infrared space and ground based projects and the complementarity with other currently ongoing or planned surveys in other spectral ranges are emphasized **Astronomical Applications of**

Astrometry M. A. C. Perryman, 2009 The Hipparcos satellite developed and launched by the European Space Agency ESA in 1989 was the first space mission dedicated to astrometry the accurate measurement of positions distances and proper motions of stars Amongst the key achievements of its measurements are refining the cosmic distance scale characterizing the large scale kinematic motions in the Solar neighborhood providing precise luminosities for stellar modelling and confirming Einstein's prediction of the effect of gravity on starlight This authoritative account of the Hipparcos contributions over the last decade is an outstanding reference for astronomers astrophysicists and cosmologists It reviews the applications of the data in different areas describing the subject and the state of the art before Hipparcos and summarizing all major contributions to the topic made by Hipparcos It contains a detailed overview of the Hipparcos and Tycho Catalogues their annexes and their updates Each chapter ends with comprehensive references to relevant literature
