Midwestern Landscape Architecture William H. Tishler,2000 This richly illustrated collection

profiles the bold innovators in landscape architecture who around the turn of the twentieth century ventured into the nation's heartland to develop a new style of design celebrating the native midwestern landscape. The pioneers of landscape architecture in the Midwest are responsible for creating some of the most recognizable parks, cemeteries, recreation areas, and other public gathering places in the region. *Midwestern Landscape Architecture* includes essays on Adolph Strauch who introduced a new concept of visually integrated landscape treatment in Cincinnati's Spring Grove Cemetery; William Le Baron Jenney, designer of Chicago's diverse West Parks; and Jens Jensen who created the American Garden in Union Park in Chicago, a celebration of native flora and founder of The Clearing, a unique school of the arts and humanities in Wisconsin. Other major figures include Frederick Law Olmsted Sr., co-designer of New York's Central Park, whose work in the Midwest included the layout of the 1893 World's Columbian Exposition; and Ossian Cole Simonds who helped reconcile the formal approach of the City Beautiful movement with the naturalism of the Prairie School in urban park design. This volume also details the contributions of crusaders for ecological awareness and an appreciation of the region's natural heritage. These include horticultural writer Wilhelm Miller who spread the ideals of the Prairie style, and Genevieve Gillette, a landscape architect and conservationist whose preservation efforts led to the establishment of numerous Michigan state parks and wilderness areas. *Midwestern Landscape Architecture* fosters a better understanding of how landscape design took shape in the Midwest and how the land itself inspired new solutions to enhance its understated beauty. Despite Olmsted's assessment of the Illinois prairie as one of the most tiresome landscapes that he ever met, the Midwest has amassed an important legacy of landscape design that continues to influence how people interact with their environment in the heartland. **Rethinking**

Environmentalism Sharachchandra Lele, Eduardo S. Brondizio, John Byrne, Georgina M. Mace, Joan Martinez-Alier, 2019-03-29. A multidisciplinary examination of alternative framings of environmental problems with using examples from forest, water, energy, and urban sectors. Does being an environmentalist mean caring about wild nature? Or is environmentalism synonymous with concern for future human well-being or about a fair apportionment of access to the earth's resources and a fair sharing of pollution burdens? Environmental problems are undoubtedly one of the most salient public issues of our time, yet environmental scholarship and action is marked by a fragmentation of ideas and approaches because of the multiple ways in which these environmental problems are framed. Diverse framings prioritize different values and explain problems in various ways, thereby suggesting different solutions. Are more inclusive framings possible? Will this enable more socially relevant, impactful research and more concerted action and practice? This book takes a multidisciplinary look at these questions using examples from forest, water, energy, and urban sectors. It explores how different forms of environmentalism are shaped by different normative and theoretical positions and attempts to bridge these divides. Individual perspectives are complemented by comprehensive syntheses of the differing framings in each sector. By self-reflectively exploring how researchers study and mobilize evidence about environmental problems, the book opens up the possibility of alternative

framings to advance collaborative and integrated understanding of environmental problems and sustainability challenges

Green Landscapes in the European City, 1750-2010 Peter Clark, Marjaana Niemi, Catharina Nolin, 2016-12-08 Green space is a fundamental concept for understanding modern and contemporary urban society shedding light not only on the ecological development of cities but also societal relations urban governance and planning processes Closely linked to issues of environmental change changing perceptions of nature urban well being and social integration as well as city economic competitiveness and branding it is an important element both in the internationalisation of European cities and the forging of their distinctive communal identities Building upon recent research on the history of green landscapes in the city in Europe and North America this volume mirrors the burgeoning global attention to urban green space developments from city policy makers and planners architects climatologists ecologists geographers and other social scientists Taking case studies from Paris London Berlin Helsinki and other leading centres the volume examines when why and how green landscapes evolved in major cities and the extent to which they have been shaped by shared external forces as well as by distinctive and specific local needs Quantifying green space trends in this way raises important issues of classification and categorisation of the different varieties of urban green space While urban parks have received considerable coverage many other smaller less prestigious spaces have been largely ignored This volume argues that green landscapes can only be properly understood when the full range of spaces from parks to recreation grounds housing areas allotments and domestic gardens is taken into account Adopting a broader approach to urban green space helps put European developments during the 19th and 20th centuries into a global perspective *Observations on the Climate of Ireland, and Researches Concerning Its Nature from Very Early Periods to the Present Time* William Patterson, 1804
