bottled water should be regulated imported water should be as safe as domestic water and that labelling should convey certain information

Regulating Infrastructure José A. Gómez-Ibáñez, 2006-09-01 In the 1980s and 90s many countries turned to the private sector to provide infrastructure and utilities such as gas telephones and highways with the idea that market based incentives would control costs and improve the quality of essential services But subsequent debacles including the collapse of California's wholesale electricity market and the bankruptcy of Britain's largest railroad company have raised troubling questions about privatization This book addresses one of the most vexing of these how can government fairly and effectively regulate natural monopolies those infrastructure and utility services whose technologies make competition impractical Rather than sticking to economics Jos G me z Ib ez draws on history politics and a wealth of examples to provide a road map for various approaches to regulation He makes a strong case for favoring market oriented and contractual approaches including private contracts between infrastructure providers and customers as well as concession contracts with the government acting as an intermediary over those that grant government regulators substantial discretion Contracts can provide stronger protection for infrastructure customers and suppliers and greater opportunities to tailor services to their mutual advantage In some cases however the requirements of the firms and their customers are too unpredictable for contracts to work and alternative schemes may be needed

Water Governance: Challenges and Prospects Amarjit Singh, Dipankar Saha, Avinash C. Tyagi, 2019-01-31 The book is the first of its kind to deal with almost the entire swath of water resources assessment development and sustainable management The idea of the book crystallized during the long journey of the Editors on various facets of water issues in India and abroad during their extended association at all levels with the Ministry of Water Resources River Development and Ganga Rejuvenation as well as International Organizations dealing with water Currently water stressed India is likely to become water scarce in not too distant a future The global freshwater supply and its sustainable use for human consumption and conservation of the ecosystem have never come under such a rigorous scrutiny before The unplanned and reckless exploitation of this precious resource have led to a crisis situation compounded by a real threat of climate change This book is therefore timely and of particular relevance not only to India but the entire world The book contains 20 chapters beside the lead article by the Editors The chapters are contributed by the eminent professionals researchers academicians and civil society representatives having an in depth understanding of the issues The contents of the chapters have been chosen to represent all aspects of water The assessment of water resources using satellite data and in depth analyses of groundwater sector like the Aquifer Mapping Programme initiated by Government of India application of gravity satellite data to assess the resource build up artificial recharge of aquifers and its contamination are dealt with by eminent experts The articles on sustainable management of water through good governance by community participation and involvement of civil society are placed Flood management both through a basin level approach as well as by building resilience in vulnerable areas is discussed Other critical issues like water bodies

management constitutional provisions water governance and financial issues hydro power and need of research and development in this sector are also dealt with aptly In view of emerging crisis and complexities in this sector the future pathways and the paradigm shift that is required in administrative and policy level is also discussed
