

# Fertility Regulation

- Fertility is a natural phenomenon. Do we have the right to interfere with it?  
In the past,
- Reproductive tract infections, pregnancy wastage and other factors caused reduced fertility.
- High child mortality also necessitated high fertility.
- Now, as a result of improved health care, fertility and child survival have increased. The family size needs planning.
- China- only one child per family, India- two and Sri Lanka- three.
- In our context, the population has declined and the family size must be increased.

advances and media coverage people often feel themselves to be totally isolated stigmatised and misunderstood by many professionals and ordinary people Childless No Choice is based on original research into the emotional and social aspects of involuntary childlessness the main component being a long term study of the experiences of couples attending an infertility clinic supported by a community survey and a study of the attitudes of general practitioners At a time of rapidly developing treatments for infertility and new legislative controls it is important that all those professionally involved have a full appreciation of the experiences and views of infertile people themselves While there is enormous attention in the media given to getting pregnant and to childbirth there is an almost total neglect of the possibility that for some people these natural functions may not happen James H Monach examines in detail the causes of childlessness and the availability of choices for childless people including artificial insemination fostering and adoption This book will be invaluable to doctors sociologists social workers psychologists health administrators and to anyone who works with childless couples as well as to childless couples themselves
