Regulatory Realities The Implementation And Impact Of Industrial Environmental Regulation:

Regulatory Realities Andrew Gouldson, Joseph Murphy, 2013-11-05 Arguing that the performance of industrial environmental regulation is determined by the level and nature of the innovation it stimulates this text aims to analyze the influence of different structures and styles of implementation on innovation in regulated companies Further aims include examining the economic and environmental performance of different forms of innovation developed and applied by industry in response to regulation describing the conditions under which industrial environmental regulation can be improved outlining the implementation approaches required for regulated companies to overcome barriers which prevent them from exploiting the economic and environmental potential of particular forms of innovation demonstrating how technological and organizational change could lead to lower costs and higher benefits from regulatory compliance and putting forward to governments and industry proposals to improve the relationship between environmental protection and industrial competitiveness

The New Environmental Regulation Daniel J. Fiorino, 2006 Winner 2007 Louis Brownlow Award presented by the National Academy of Public Administration NAPA and 2006 Best Book in Environmental Management and Policy American Society for Public Administration Environmental regulation in the United States has succeeded to a certain extent in solving the problems it was designed to address air water and land are indisputably cleaner and in better condition than they would be without the environmental controls put in place since 1970 But Daniel Fiorino argues in *The New Environmental Regulation* that given recent environmental economic and social changes it is time for a new more effective model of environmental problem solving Fiorino provides a comprehensive but concise overview of U S environmental regulation its history its rationale and its application and offers recommendations for a more collaborative flexible and performance based alternative Traditional environmental regulation was based on the increasingly outdated assumption that environmental protection and business are irreversibly at odds The new environmental regulation Fiorino describes is based on performance rather than on a narrow definition of compliance and uses such policy instruments as market incentives and performance measurement It takes into consideration differences in the willingness and capabilities of different firms to meet their environmental obligations and it encourages innovation by allowing regulated industries especially the better performers more flexibility in how they achieve environmental goals Fiorino points to specific programs including the 33 50 Program innovative permitting and the use of covenants as environmental policy instruments in the Netherlands that have successfully pioneered these new strategies By bringing together such a wide range of research and real world examples Fiorino has created an invaluable resource for practitioners and scholars and an engaging text for environmental policy courses

Personnel and Policy Analysts Managers and Decision Makers and NGOs **Implementing European Environmental Policy** Matthieu Glachant, 2001-12-21 This significant book investigates the political economy of environmental policy in Europe with a careful analysis of how EU directives are realised in the member states The authors explore this issue through a comparative evaluation of the implementation of three pieces of EU environmental legislation in France Germany the Netherlands and the UK Areas covered by the legislation include air emission standards for waste incinerators the electricity supply industry and the certification of environmental management systems The results vary across cases even though overcompliance is observed in certain cases The regularity arising from the different case studies is related to the determinants of the environmental outcomes that are observed When environmental directives are implemented they are likely to interact with parallel policy processes and these interactions can exert a strong positive or negative influence on the success of the policy in question The central policy problem is the fact that these interactions are very difficult to anticipate at the policy formulation stage It leads the authors to propose that effective environmental policy should therefore be adaptable in order to cope with these unanticipated effects **International Aid and China's Environment** Katherine

Morton, 2006-05-17 Rapid economic growth in the world's most populous nation is leading to widespread soil erosion desertification deforestation and the depletion of vital natural resources The scale and severity of environmental problems in China now threaten the economic and social foundations of its modernization Using case studies Morton analyzes the relationship between international and local responses to environmental problems in China challenging the prevailing wisdom that weak compliance is the only constraint upon local environmental management in China It advances two interrelated discussions first it constructs a conceptual framework for understanding the key dimensions of environmental capacity This is broadly defined to encompass the financial institutional technological and social aspects of environmental management Second the book presents the results of an empirical inquiry into the implementation of donor funded environmental projects in both China's poorer and relatively developed regions By drawing upon extensive fieldwork it seeks to explain how and under what conditions international donors can strengthen China's environmental capacity especially at the local level It will be of interest to those studying Chinese politics environmental studies and international relations

The Handbook of Environmental Voluntary Agreements Edoardo Croci, 2005-10-06 EDOARDO CROCI IEFE Universit Bocconi Milano Italy Voluntary approaches in environmental policy represent a third wave of regulation in the environmental field Command and control was the first wave Its core is based on uniform emission standards the respect of which needs to be enforced through extensive monitoring and severe sanctions The expected cost of sanction for non

compliance calculated as its amount multiplied for the probability to be caught must be superior to the benefits of non compliance in order to let the sanction be effective As the benefits of non compliance can vary among firms sanctions need to be very high in order to be effective In fact sanctions are ordinary correlated to environmental damage and not to the benefits of non compliance But very high sanctions can be difficult to enforce as they appear unfair and can lead to dramatic consequences on firms and workers up to shut downs of plants Ambient standards reduce these problems but oblige the regulator to know a huge amount of information regarding the specific contribution of each polluter to the polluted body Information is difficult to obtain because of asymmetric information and costly to produce because it requires large and skilled regulating and enforcing organizations Nevertheless complex regulation is the base of any environmental policy framework as it allows the policy maker to fully exercise its power of composition of various interests in a relatively transparent way Economic instruments were the second wave

corporate governance and business strategy in particular those relating to climate change and to environmental management more generally It is also of relevance to business practitioners public policy makers investors and NGOs interested in ensuring that companies play a constructive role in the transition to a low carbon economy **Empires of Sustainability**

Joseph Murphy, 2024-06-07 Focussing on the greening of imperialisms and empires Empires of Sustainability analyses the shift around the world from denial of the environmental crisis to action to prevent catastrophe and the resulting implications Evidence of this shift is clear in widespread and purposeful social change which is gathering momentum The book explains how globalisation accelerated us towards the crisis and today even as its own legitimacy is being questioned is evolving through solutions and responses to it Looking ahead and as the environmental crisis worsens two possible futures are discerned and explored One is that through universal actions to save the planet shaped by interweaving political and economic forces the hegemony of globalisation is restored albeit in a green form The other is that the world reorganises into competing spheres of influence with politics economics and the environment interwoven differently in each case In these ways we face the prospect of one or more Empires of Sustainability emerging over the decades ahead unless we build a better alternative society The author presents an alternative a more diverse World of Caring Places This accessible book will appeal to students and scholars of international political economy sustainability and environmental studies and analysts policy makers campaigners and others concerned about the future of relations between people and planet
