include psychology's self image as a scientific discipline Authors also argue that the dogma of neuropsychology in education has demoted concepts such as emotion feeling and relationship so that they are now blind spots in educational theory Other chapters offer a cautionary analysis of how misshapen notions of psychology can legitimize eugenics as in Nazi Germany and poison racial attitudes Above all has psychology with its focus on individual merit been complicit in hiding the impacts of power and privilege in education This bracing new volume adopts a broader definition of education and childrearing that admits the essential contribution of the humanities to the proper study of mankind This publication as well as the ones that are mentioned in the preliminary pages of this work were realized by the Research Community FWO Vlaanderen Research Foundation Flanders Belgium Philosophy and History of the Discipline of Education Faces and Spaces of Educational Research
