Rocks And Chairs:

Rocks and Chairs Robert Hershen, 1975 The Case for a Living Universe Matthew R Benton, 2024-08-14 We are composed of the same atoms as the rocks soil mountains and nothing more They are apparently aware of nothing whereas we are aware of the physical world ourselves and much more besides How is this possible Science says our minds emerge from wholly unknowing matter The idea that mind and matter are in fact one and the same has long been considered an elegant although impractical answer to the question above The Case for a Living Universe argues there is an element of mind in all matter and that our consciousness is one instance of an aware intelligence present throughout nature Unlike most philosophy books it gives the non human world its proper status by describing recent studies into animal cognition and the clever behaviours of some non animal life It examines how Western culture through religion science and philosophy have worked to separate us from nature and argues the reason mind in nature is usually considered an eccentric or mystical idea is because we humans have wrongly elevated ourselves above all other species As Charles Darwin once wrote He who understands baboon would do more towards metaphysics than Locke The Nature of Physical Computation Oron Shagrir, 2022 Computing systems are ubiquitous in contemporary life Even the brain is thought to be a computing system of sorts But what does it mean to say that a given organ or system computes What is it about laptops smartphones and nervous systems that they are deemed to compute and why does it seldom occur to us to describe stomachs hurricanes rocks or chairs that way These questions are key to laying the conceptual foundations of computational sciences including computer science and engineering and the cognitive and neural sciences Oron Shagrir here provides an extended argument for the semantic view of computation which states that semantic properties are involved in the nature of computing systems The first part of the book provides general background Although different in scope these chapters have a common theme namely that the linkage between the mathematical theory of computability and the notion of physical computation is weak The second part of the book reviews existing non semantic accounts of physical computation Shagrir analyzes three influential accounts in greater depth and argues that none of these accounts is satisfactory but each of them highlights certain key features of physical computation that he eventually adopts in his own semantic account of physical computation a view that rests on a phenomenon known as simultaneous implementation or indeterminacy of computation Shagrir completes the characterization of his account of computation and highlights the distinctive feature of computational explanations

Cherokee Language Lessons Michael Joyner, 2014 One of the keys to acquiring a new language is to learn the patterns that make up the language Simply learning phrases so you can speak pidgin Cherokee is not learning Cherokee You need to learn the fundamentals of the language on how words are put together to be able to understand and communicate in the language There are many degrees of meaning that different word parts provide and if you don't learn these shades of meaning up front and how they are expressed you will never progress beyond simple memorized phrases and never obtain satisfaction with the language While each person's skill will differ one should strive to gain enough understanding of the mechanics of language to be able to comprehend and communicate effectively The goal of this material is to provide you a solid structural foundation on how Cherokee works You will learn how words are put together in basic sentences and how to form new words for ideas not listed in the dictionary
