Sg Und Statistics:

Family and Population Changes in Singapore Wei-Jun Jean Yeung, Shu Hu, 2018-04-17 This book depicts the evolution of Singapore's family and population landscape in the last half a century, the related public policies and future challenges. Since the country gained independence in 1965, family and population policies have been integral to her nation-building strategies. The chapters discuss the changes in population compositions, family structures, relations, and values among major ethnic groups. They also discuss policies for vulnerable populations such as female-headed households, cross-cultural families, same-sex partnering, the elderly, and low-income families.

Mathematics Curriculum in Pacific Rim Countries - China, Japan, Korea, and Singapore Zalman Usiskin, Edwin Willmore, 2008-09-01 This volume contains the proceedings of the First International Curriculum Conference sponsored by the Center for the Study of Mathematics Curriculum (CSMC). The CSMC is one of the National Science Foundation Centers for Learning and Teaching Award No. ESI 0333879. The countries China, Japan, Korea, and Singapore, in alphabetical order, which also happens to be the order of their populations, have each been in the news because of their performance on international tests and/or their economic performance and potential. They also have centralized education ministries that create a single mathematics curriculum framework followed in the entire country. In all these countries, curricula are differentiated for students with different interests, usually around Grade 10 or 11. We think the reader will agree that the papers are of very high quality, befitting the standing of the individuals who were invited, but particularly notable for our international speakers because in three of these countries, English is not the speaker's first language. Following each paper, we have included a short biography of the author so that the reader can understand the perspective of the paper's author.

Low Fertility in Japan, South Korea, and Singapore Shigeki Matsuda, 2020-02-18 This book describes the low fertility status in three developed Asian countries: Japan, South Korea, and Singapore, and outlines countermeasures for their declining birthrates. Based on the characteristics of each society, the authors discuss why their fertility rates have not yet recovered. Low fertility is a demographic phenomenon that first occurred in Europe and subsequently spread across other countries. Currently, the fertility rates in Europe are relatively stable, while those in developed Asian economies are the lowest worldwide. This may cause labor shortages and weaken their social security systems, undermining Asia's social and economic sustainability despite its remarkable economic development. In response to low fertility, some Asian countries have implemented countermeasures. Japan has introduced measures based on childcare facilities and work-life balance. Similarly, since the mid-2000s, South Korea has established countermeasures to promote a balance between work and child-rearing, as well as expanded childcare services. Singapore began introducing countermeasures before the other two countries, including various advanced measures. Yet none of these countries has seen a full recovery in fertility rates. Based on a statistical analysis of survey results from the three countries, this book makes several important points. The first is that the policy has been ineffective in Japan due to a discrepancy between the needs of

parents raising children and those who are the targets of the countermeasures Second the work life balance and child rearing support measures that have been promoted in Japan and South Korea have not affected the number of children that women want to have Third Singaporean values tend to place individual emphasis on competition with oneself education and career status rather than on married life This intense competition has lowered fertility rates To restore these rates each country must promote policies that better address its specific issues

Demography: Analysis and Synthesis, Four Volume Set Graziella Caselli, Jacques Vallin, Guillaume Wunsch, 2006-01-03 This four volume collection of over 140 original chapters covers virtually everything of interest to demographers sociologists and others Over 100 authors present population subjects in ways that provoke thinking and lead to the creation of new perspectives not just facts and equations to be memorized The articles follow a theory methods applications approach and so offer a kind of one stop shop that is well suited for students and professors who need non technical summaries such as political scientists public affairs specialists and others Unlike shorter handbooks Demography Analysis and Synthesis offers a long overdue thorough treatment of the field Choosing the analytical method that fits the data and the situation requires insights that the authors and editors of Demography Analysis and Synthesis have explored and developed This extended examination of demographic tools not only seeks to explain the analytical tools themselves but also the relationships between general population dynamics and their natural economic social political and cultural environments Limiting themselves to human populations only the authors and editors cover subjects that range from the core building blocks of population change fertility mortality and migration to the consequences of demographic changes in the biological and health fields population theories and doctrines observation systems and the teaching of demography The international perspectives brought to these subjects is vital for those who want an unbiased rounded overview of these complex multifaceted subjects Topics to be covered Population Dynamics and the Relationship Between Population Growth and Structure The Determinants of Fertility The Determinants of Mortality The Determinants of Migration Historical and Geographical Determinants of Population The Effects of Population on Health Economics Culture and the Environment Population Policies Data Collection Methods and Teaching about Population Studies All chapters share a common format Each chapter features several cross references to other chapters Tables charts and other non text features are widespread Each chapter contains at least 30 bibliographic citations

Prior Processes and Their Applications Eswar G. Phadia, 2016-07-27 This book presents a systematic and comprehensive treatment of various prior processes that have been developed over the past four decades for dealing with Bayesian approach to solving selected nonparametric inference problems This revised edition has been substantially expanded to reflect the current interest in this area After an overview of different prior processes it examines the now pre eminent Dirichlet process and its variants including hierarchical processes then addresses new processes such as dependent Dirichlet local Dirichlet time varying and spatial processes all of which exploit the countable mixture representation of the Dirichlet process It subsequently discusses various

neutral to right type processes including gamma and extended gamma beta and beta Stacy processes and then describes the Chinese Restaurant Indian Buffet and infinite gamma Poisson processes which prove to be very useful in areas such as machine learning information retrieval and featural modeling Tailfree and Polya tree and their extensions form a separate chapter while the last two chapters present the Bayesian solutions to certain estimation problems pertaining to the distribution function and its functional based on complete data as well as right censored data Because of the conjugacy property of some of these processes most solutions are presented in closed form However the current interest in modeling and treating large scale and complex data also poses a problem the posterior distribution which is essential to Bayesian analysis is invariably not in a closed form making it necessary to resort to simulation Accordingly the book also introduces several computational procedures such as the Gibbs sampler Blocked Gibbs sampler and slice sampling highlighting essential steps of algorithms while discussing specific models In addition it features crucial steps of proofs and derivations explains the relationships between different processes and provides further clarifications to promote a deeper understanding Lastly it includes a comprehensive list of references equipping readers to explore further on their own

Statistics in Volcanology Heidi M. Mader, 2006 *Statistics in Volcanology* is a comprehensive guide to modern statistical methods applied in volcanology written by today's leading authorities The volume aims to show how the statistical analysis of complex volcanological data sets including time series and numerical models of volcanic processes can improve our ability to forecast volcanic eruptions Specific topics include the use of expert elicitation and Bayesian methods in eruption forecasting statistical models of temporal and spatial patterns of volcanic activity analysis of time series in volcano seismology probabilistic hazard assessment and assessment of numerical models using robust statistical methods Also provided are comprehensive overviews of volcanic phenomena and a full glossary of both volcanological and statistical terms *Statistics in Volcanology* is essential reading for advanced undergraduates graduate students and research scientists interested in this multidisciplinary field

Small Country Innovation Systems Charles Edquist, Leif Hommen, 2009-01-01 What are the challenges that small countries face concerning innovation and what are the effects of globalization on their innovation systems In this very interesting rich and timely book Edquist and Hommen compare ten different small national innovation systems from the Asia Pacific and Northern Europe that are rather advanced in their development The answers that the authors give are convincing and relate not only to the unique characteristics of each national system that shapes innovative activity but also to some commonalities that exist across these countries Franco Malerba Bocconi University Italy This major book presents case

studies of ten small country national systems of innovation NSIs in Europe and Asia namely Denmark Finland Hong Kong Ireland the Netherlands Norway Singapore South Korea Sweden and Taiwan These cases have been carefully selected as examples of success within the context of globalization and as new economies where competition is increasingly based on innovation To facilitate comparative analysis the ten studies follow a common structure informed by an activities based approach to describing and analysing NSIs which addresses the critical issues of globalization and the consequences of innovation for economic performance The final chapter compares fast growth and slow growth countries concentrating on issues of innovation policy The results illustrate the usefulness of an activities based approach to studying NSIs point to distinctive national roles within an increasingly differentiated international division of labour and address the key themes of selectivity and coordination in innovation policy This valuable book presents one of the most significant comprehensive and comparative country studies of NSIs in the last decade It will have great import and should be widely read by every serious student and scholar of innovation studies
