Longitudinal Research On Individual Development Present Status And Future Perspectives:

Longitudinal Research on Individual Development David Magnusson, Paul Casaer, 1993-11-18 Longitudinal research is an essential element in the investigation of human development over time with considerable advantages over more widely used cross sectional research designs This book examines the scope for longitudinal studies in a range of developmental fields emphasizing the advantages of this approach for the investigation of causal mechanisms and processes and the dynamics of development over the life span It also discusses methodological issues and some of the practical and ethical problems that longitudinal research may present Contributors review normal and disordered development in the emotional cognitive and social domains including valuable discussions of gene environment interactions the maturation of the human brain and issues relating to aging

Studying individual Development in An interindividual Context Lars R. Bergman, David Magnusson, Bassam M. El Khouri, 2003-01-30 During the last decade there has been increased awareness of the limitations of standard approaches to the study of development When the focus is on variables and relationships the individual is easily lost This book describes an alternative person oriented approach in which the focus is on the individual as a functioning whole The authors take as their theoretical starting points the holistic interactionistic research paradigm expounded by David Magnusson and others and the new developmental science in which connections and interactions between different systems biological psychological social etc are stressed They present a quantitative methodology for preserving to the maximum extent possible the individual as a functioning whole that is largely based on work carried out in the Stockholm Laboratory for Developmental Science over the past 20 years The book constitutes a complete introductory guide to the person oriented approach The authors lay out the underlying theory a number of basic methods the necessary computer programs and an extensive empirical example The computer programs have been collected into a statistical package SLEIPNER that is freely accessible on the Internet The empirical example deals with boys school adjustment from a pattern perspective and covers both positive and negative adaptation Studying Individual Development in an Interindividual Context A Person Oriented Approach will be crucial reading for all researchers who seek to understand the complexities of human development and for their advanced students

Handbook of the Life Course Michael J. Shanahan, Jeylan T. Mortimer, Monica Kirkpatrick Johnson, 2015-10-26 Building on the success of the 2003 Handbook of the Life Course this second volume identifies future directions for life course research and policy The introductory essay and the chapters that make up the five sections of this book show consensus on strategic next steps in life course studies These next steps are explored in detail in each section Section I on life course theory provides fresh perspectives on well established topics including cohorts life stages and legal and regulatory contexts It challenges life course scholars to move beyond common individualistic paradigms Section II highlights changes in major institutional and organizational contexts of the life course It draws on conceptual advances and recent empirical findings to identify promising avenues for research that illuminate the

interplay between structure and agency It examines trends in family school and workplace as well as contexts that deserve heightened attention including the military the criminal justice system and natural and man made disaster The remaining three sections consider advances and suggest strategic opportunities in the study of health and development throughout the life course They explore methodological innovations including qualitative and three generational longitudinal research designs causal analysis growth curves and the study of place Finally they show ways to build bridges between life course research and public policy

The Lifespan Development of Individuals David Magnusson,1997-10-28 A full understanding of the developmental process in individuals requires contributions from disciplines including developmental biology and psychology physiology neuropsychology social psychology sociology and anthropology This ambitious and wide ranging book integrates the findings from these and related areas to form a holistic view of human development from conception to death Distinguished scientists have combined their expertise in a synthesis of biological and social sciences that will demand the attention of all researchers and practitioners concerned with human development across the lifespan Based on a Nobel symposium the topics discussed range from the function and development of single cells to the whole organism interacting with its environment Drawing upon new theories and models including the study of nonlinear dynamic systems and chaos theory this book represents a major step in the move towards an integrated science of human development

Concepts and Theories of Human Development Richard M. Lerner,2013-05-13 A classic in the field this third edition will continue to be the book of choice for advanced undergraduate and graduate level courses in theories of human development in departments of psychology and human development This

volume has been substantially revised with an eye toward supporting applied developmental science and the developmental systems perspectives. Since the publication of the second edition, developmental systems theories have taken center stage in contemporary developmental science and have provided compelling alternatives to reductionist theoretical accounts having either a nature or nurture emphasis. As a consequence, a developmental systems orientation frames the presentation in this edition. This new edition has been expanded substantially in comparison to the second edition. Special features include: A separate chapter focuses on the historical roots of concepts and theories of human development on philosophical models of development and on developmental contextualism. Two new chapters surrounding the discussion of developmental contextualism: one on developmental systems theories wherein several exemplars of such models are discussed and a corresponding chapter wherein key instances of such theories life span, life course, bioecological, and action theoretical ones are presented. A new chapter on cognition and development is included contrasting systems approaches to cognitive development with neo-nativist perspectives. A more differentiated treatment of nature-oriented theories of development is provided. There are separate chapters on behavior genetics, the controversy surrounding the study of the heritability of intelligence, work on the instinctual theory of Konrad Lorenz, and a new chapter on sociobiology. A new chapter concentrates on applied developmental science.

Risk and Protective Factors in Schizophrenia Heinz Häfner, 2012-12-06 H. HAFNER
 Schizophrenia Research Unit, Central Institute of Mental Health, Mannheim, Germany. The present volume contains the lectures and invited discussions of the symposium on Risk and protective factors in schizophrenia towards a conceptual model of the disease process which was held at the International Science Forum of the University of Heidelberg from October 25 to 27, 2001. They are supplemented by a Summary and outlook in which Peter Jones gives a brief overview of the results and perspectives featured in the presentations and discussions. The contributions and discussions reflect the open-minded and creative atmosphere at the meeting. The systematically structured program of the symposium continued the tradition of the Search for the Causes of Schizophrenia symposia which were first started in 1986 on the occasion of the 600 anniversary of the University of Heidelberg and which are co-organized with Prof. Wagner-Farid Gattaz, São Paulo. The aim of these symposia and their proceedings volumes 6, 8, 10 has been to reflect the state of the art in schizophrenia research at their time and they have successfully done so. In contrast, the present symposium pursued a more limited objective and was of a different type. It brought together around a large table at the International Science Forum in Heidelberg 22 invited speakers and discussants and an equal number of young scientists working in the research fields in question who were thus given an opportunity to listen and to participate.
