Geothermal Energy Update , 1978-12 **Climate Change and Clean Energy Management** Henry Wang, 2019-10-22
Climate change has never been more important than it is now as it has become arguably the world's most urgent problem. Solving this problem is proving difficult and complex as it involves joint efforts by governments, companies, communities, and innovators. The increased use of fossil fuels associated with global economic growths has led to rising GHG emissions and global warming. There are many challenges for countries that are enacting new climate and clean energy regulations in line with their Paris Agreement commitments. Good government policies and corporate strategies are essential to support these efforts as part of the global climate change crisis. This important book addresses the latest climate change impacts and developments in potential mitigation strategies. These include fossil to clean energy transition, smart low carbon city designs, green transportation, electric vehicles, green agriculture, carbon emission trading, carbon capture solutions, plus climate finance and risk management. Potential new policies and strategies to support the successful implementation of these important strategic areas are discussed together with high level country and business case examples. This book is essential reading for policy makers, government employees, business executives, professionals, researchers, and academics alike looking to affect change to global climate and energy policies. **Investigative Hearings on Energy and Environmental Activities of Federal Agencies During 1975 (part 1)** United States.
