Mathematical Foundations Of Computer Science Lecture Notes In Computer Science Volume 233:
Mathematical Foundations of Computer Science 1988 Michal Chytil,Ladislav Janiga,Václav Koubek,1988 This volume contains 11 invited lectures and 42 communications presented at the 13th Conference on Mathematical Foundations of Computer Science MFCS 88 held at Carlsbad Czechoslovakia August 29 September 2 1988 Most of the papers present material from the following four fields complexity theory in particular structural complexity concurrency and parellelism formal language theory semantics Other areas treated in the proceedings include functional programming inductive syntactical synthesis unification algorithms relational databases and incremental attribute evaluation *Mathematical Foundations of Programming Language Semantics* Michael Main,Austin Melton,Michael Mislove,David Schmidt,1988-03-09 This volume is the proceedings of the 3rd Workshop on the Mathematical Foundations of Programming Language Semantics held at Tulane University New Orleans Louisiana April 8 10 1987 The 1st Workshop was at Kansas State University Manhattan Kansas in April 1985 see LNCS 239 and the 2nd Workshop with a limited number of participants was at Kansas State in April 1986 It was the intention of the organizers that the 3rd Workshop survey as many areas of the Mathematical Foundations of Programming Language Semantics as reasonably possible The Workshop attracted 49 submitted papers from which 28 papers were chosen for presentation The papers ranged in subject from category theory and Lambda calculus to the structure theory of domains and power domains to implementation issues surrounding semantics **Graph-Theoretic Concepts in Computer Science** Herbert Göttler,1988-06-08 This book reflects the scientific program of the annual workshop on Graph theoretic Concepts in Computer Science in 1987 The purpose of this conference is to be the missing link between theory and application of graphs in as many branches of computer science as a conference scheduled for three days without parallel sessions can permit So the organizers of WG 87 addressed a selected group of people with a strong interest in theory and practice The proceedings include latest results on classical graph theoretic problems including formal language theory applied to graphs and how to apply those results to practical problems e g data bases layout of graph operating systems software engineering chemistry and modelling with graphs **Algorithms and Complexity** Jan Leeuwen,1990-09-12 The second part of this Handbook presents a choice of material on the theory of automata and rewriting systems the foundations of modern programming languages logics for program specification and verification and some chapters on the theoretic modelling of advanced information processing **Foundations of Software Technology and Theoretical Computer Science** Kesav V. Nori,1987-11-25 This volume gives the proceedings of the Tenth Conference on Foundations of Software Technology and Theoretical Computer Science These conferences are organized and run by the computer science research community in India and their purpose is to provide a forum for professional interaction between members of this research community and their counterparts in different parts of the world The volume includes four invited papers on reasoning about linear constraints using parametric queries the parallel evaluation of classes of circuits a theory of

commonsense visual reasoning natural language processing complexity theory and logic The 26 submitted papers are organized into sections on logic automata and formal languages theory of programming parallel algorithms geometric algorithms concurrency distributed computing and semantics   MFDBS 87 Joachim Biskup,Janos Demetrovics,Jan Paredaens,Bernhard Thalheim,1988-04-01 This volume contains the 13 best of the 18 papers presented at the first MFDBS conference held in Dresden GDR January 19 23 1987 A short summary of the two panel discussions is also included The volume is intended to be a reflection of the current state of knowledge and a guide to further development in database theory The main topics covered are theoretical fundaments of the relational data model dependency theory design theory null values query processing complexity theory and of its extensions graphical representations NF2 models conceptual modelling of distributed database management systems and the relationship between logic and databases   The Munich Project CIP ,1988-01-13 This book is the second of two volumes that present the main results which emerged from the project CIP Computer Aided Intuition Guided Programming at the Technical University of Munich Its central theme is program development by transformation a methodology which is becoming more and more important Whereas Volume I contains the description and formal specification of a wide spectrum language CIP L particularly tailored to the needs of transformational programming Volume II serves a double purpose First it describes a system called CIP S that is to assist a programmer in the method of transformational programming Second it gives a non toy example for this very method since it contains a formal specification of the system core and transformational developments for the more interesting system routines Based on a formal calculus of program transformations the informal requirements for the system are stated Then the system core is formally specified using the algebraic data types and the pre algorithmic logical constructs of the wide spectrum language CIP L It is demonstrated how executable procedural level programs can be developed from this specification according to formal rules The extensive collection of these rules is also contained in the book it can be used as the basis for further developments using this method Since the system has been designed in such a way that it is parameterized with the concrete programming language to be transformed the book also contains a guide how to actualize this parameter the proceeding is exemplified with a small subset of CIP L   The Foundations of Computability Theory Borut Robič,2015-09-14 This book offers an original and informative view of the development of fundamental concepts of computability theory The treatment is put into historical context emphasizing the motivation for ideas as well as their logical and formal development In Part I the author introduces computability theory with chapters on the foundational crisis of mathematics in the early twentieth century and formalism in Part II he explains classical computability theory with chapters on the quest for formalization the Turing Machine and early successes such as defining incomputable problems c e computably enumerable sets and developing methods for proving incomputability in Part III he explains relative computability with chapters on computation with external help degrees of unsolvability the Turing hierarchy of unsolvability the class of degrees of unsolvability c e degrees and the

priority method and the arithmetical hierarchy This is a gentle introduction from the origins of computability theory up to current research and it will be of value as a textbook and guide for advanced undergraduate and graduate students and researchers in the domains of computability theory and theoretical computer science *Advances in Petri Nets 1991* Helmut Plünnecke,Wolfgang Reisig,1991 The main idea behind the series of volumes Advances in Petri Nets is to present to the general computer science community recent results which are the most representative and significant for the development of the area Thepapers for the volumes are drawn mainly from the annual International Conferences on Applications and Theory of Petri Nets Selected papers from the latest conference are independently refereed and revised and extended as necessary Some further papers submitted directly to the editor are included Advances in Petri Nets 1991 covers the 11th International Conference on Applications and Theory of Petri Nets held in Paris France in June 1991 The volume contains the Bibliography of Petri Nets 1990 prepared by H Pl nnecke and W Reisig with over 4000 entries PUBLISHER S WEBSITE **A Connotational Theory of Program Structure** James S. Royer,1987-08-26 This book presents developments of a language independent theory of program structure The theory features a simple natural notion of control structure which is much broader than in other theories of programming languages such as denotational semantics and program schemes This notion permits treatment of control structures which involve not only the denotation of programs i e their input output behavior but also their structure size run times etc The theory also treats the relation of control structure and complexity properties of programming languages The book focuses on expressive interdependencies of control structures which control structures can be expressed by which others A general method of proving control structures expressively independent is developed The book also considers characterizations of the expressive power of general purpose programming languages in terms of control structures Several new characterizations are presented and two compactness results for such characterizations are shown *Global Dynamics of the Earth* Roberto Sabadini,Bert Vermeersen,2004-04-30 This volume opens up new perspectives on the physics of the Earth s interior for graduate students and researchers working in the fields of geophysics and geodesy It looks at our planet in an integrated fashion linking the physics of its interior to the geophysical and geodetic techniques that record over a broad spectrum of spatial wavelengths the ongoing modifications in the shape and gravity field of the planet Basic issues related to the rheological properties of the Earth s mantle and to its slow deformation will be understood in both mathematical and physical terms within the framework of an analytical normal mode relaxation theory Fundamentals of this theory are developed in the first tutorial part The second part deals with a wide range of applications ranging from changes in the Earth s rotation to post seismic deformation and sea level variations induced by post glacial rebound In the study of the physics of the Earth s interior the book bridges the gap between seismology and geodynamics , **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office,1976 **ECOOP '87. European Conference on Object-Oriented Programming** Jean Bezivin,Jean-Marie

Hullot,Pierre Cointe,Henry Lieberman,1987 This volume contains the proceedings of the first European Conference on Object Oriented Programming held in Paris June 15 17 1987 The idea of this annual conference series is to provide a forum for theorists and practitioners interested in the object oriented programming paradigm The contributions cover the following aspects of object oriented programming methodology implementation theory interfaces languages simulation inheritance

Fundamentals of Computation Theory Lothar Budach,Rais G. Bukharajev,Oleg B. Lupanov,1987-12-09 This volume contains abridged versions of most of the sectional talks and some invited lectures given at the International Conference on Fundamentals of Computation Theory held at Kazan State University Kazan USSR June 22 26 1987 The conference was the sixth in the series of FCT Conferences organized every odd year and the first one to take place in the USSR FCT 87 was organized by the Section of Discrete Mathematics of the Academy of Sciences in the USSR the Moscow State University Department of Discrete Mathematics and the Kazan State University Department of Theoretical Cybernetics This volume contains selected contributions to the following fields Mathematical Models of Computation Synthesis and Complexity of Control Systems Probabilistic Computations Theory of Programming Computer Assisted Deduction The volume reflects the fact that FCT 87 was organized in the USSR A wide range of problems typical of research in Mathematical Cybernetics in the USSR is comprehensively represented *Semantics of the Probabilistic Typed Lambda Calculus* Dirk Draheim,2017-02-28 This book takes a foundational approach to the semantics of probabilistic programming It elaborates a rigorous Markov chain semantics for the probabilistic typed lambda calculus which is the typed lambda calculus with recursion plus probabilistic choice The book starts with a recapitulation of the basic mathematical tools needed throughout the book in particular Markov chains graph theory and domain theory and also explores the topic of inductive definitions It then defines the syntax and establishes the Markov chain semantics of the probabilistic lambda calculus and furthermore both a graph and a tree semantics Based on that it investigates the termination behavior of probabilistic programs It introduces the notions of termination degree bounded termination and path stoppability and investigates their mutual relationships Lastly it defines a denotational semantics of the probabilistic lambda calculus based on continuous functions over probability distributions as domains The work mostly appeals to researchers in theoretical computer science focusing on probabilistic programming randomized algorithms or programming language theory *Algorithmic Randomness* Johanna N. Y. Franklin,Christopher P. Porter,2020-05-07 The last two decades have seen a wave of exciting new developments in the theory of algorithmic randomness and its applications to other areas of mathematics This volume surveys much of the recent work that has not been included in published volumes until now It contains a range of articles on algorithmic randomness and its interactions with closely related topics such as computability theory and computational complexity as well as wider applications in areas of mathematics including analysis probability and ergodic theory In addition to being an indispensable reference for researchers in algorithmic randomness the unified view of the theory presented here makes this an excellent entry point for

graduate students and other newcomers to the field   *STACS 2007* Wolfgang Thomas,2007-02-08 This book constitutes the refereed proceedings of the 24th Annual Symposium on Theoretical Aspects of Computer Science STACS 2007 held in Aachen Germany in February 2007 The 56 revised full papers presented together with 3 invited papers were carefully reviewed and selected from about 400 submissions The papers address the whole range of theoretical computer science including algorithms and data structures automata and formal languages complexity theory logic in computer science semantics specification and verification of programs rewriting and deduction as well as current challenges like biological computing quantum computing and mobile and net computing   Trends, Techniques, and Problems in Theoretical Computer Science Alica Kelemenova,Jozef Kelemen,1987-10-21 Aerodynamics and hydrodynamics are still the main domains that make greater use of flow visualization and classical optical techniques such as schlieren and interferometry than of more recent techniques such as holography speckle laser light sheets laser induced tracers and laser induced fluorescence A number of studies are now under way on turbulent and vortex flows within boundary layers or wakes in the mixing layer of two flows Other studies concern jets two phase flows and air water interface To review and discuss developments in flow visualization four international symposia have been held Following Tokyo Bochum and Ann Arbor the Fourth International Symposium on Flow Visualization ISFV 4 was held in Paris in August 1986   Attribute Grammars Pierre Deransart,Martin Jourdan,Bernard Lorho,1988-08-10 This book treats the problem of formulating models in mathematical programming and thereafter solving the resulting model Particular emphasis is placed on the interaction between the two The topic is viewed from different angles namely linear programming Walter Murray integer programming Ellis Johnson network flows John Mulvey and stochastic programming Roger J B Wets The book will be very useful for any mathematics programmer or operations researcher who works in the field of real world modelling The book is an important part of any university course in modelling particularly in operations research economics and business The book also contains an article on the origins of mathematical programming Alexander Rinnooy Kan This is important reading for anyone interested in the history of the field
