really impressed me John F Nash Jr Princeton University Nobel Memorial Prize in Economic Sciences The book is within my scope of interest because of its novelty and practicality First there is a need for realistic modeling of complex systems both natural and artificial that conclude computer and economic systems There has been an ongoing effort in developing models dealing with complexity and incomplete knowledge Consequently it is clear to recognize the contribution of Mutanov to encapsulate economic modeling with emphasis on budgeting and innovation Secondly the method proposed by Mutanov has been verified by applying to the case of the Republic of Kazakhstan with her vibrant emerging economy Thirdly Chapter 5 of the book is of particular interest for the computer technology community because it deals with innovation In summary the book of Mutanov should become one of the outstanding recognized pragmatic guides for dealing with innovative systems Andrzej Rucinski University of New Hampshire This book is unique in its theoretical findings and practical applicability The book is an illuminating study based on an applied mathematical model which uses methods such as linear programming and input output analysis Moreover this work demonstrates the author s great insight and academic brilliance in the fields of finance technological innovations and marketing vis vis the market economy From both theoretical and practical standpoint this work is indeed a great achievement Yeon Cheon Oh President of Seoul National University *Some Quantitative Methods and Models in Economic Theory* Alexander V. Prasolov, 2016 This book takes an intermediate place between monographs and textbooks on the one hand it contains known yet unusually portrayed facts and on the other hand the author brings his own results corresponding to the field of research It is already obvious from the title that while reading the book attention and concentration are required as it is always necessary when studying books with mathematical content Mathematical models and methods in the economic theory are very various They are as follows econometrics the game theory operation research nonlinear and chaotic dynamics and many other aspects as well The book will be interesting only to those who are already familiar with corresponding tasks as well as to students at all levels specializing in economic dynamics in decision making methods in forecasting effects of management and in the analysis of interaction of economic agents In terms of the most interesting and new models of economic dynamics the authors emphasize multidimensional nonlinear systems of the differential equations of Lotka Volterra type These models have been constructed and analyzed and scopes of their application and various methods of coefficients identification have been offered for them The analysis of the competition between various economic agents i e branches of economy rival companies and sellers in the market has been made Another fact unusual to similar monographs is the inclusion of the theory of differential equations with the retarded argument In economic theory there are numerous examples of models being used with discrete time they also have been given attention here and with time lags concentrated or distributed Such an approach gives more adequate models without lags but in the differential equations with continuous time the introduction of delay complicates systems while the growth of delay the qualitative behavior of trajectories is changed Additionally there appear fluctuations such as stability being

changed by instability etc As the author has belonged to the St Petersburg Mathematical School for more than thirty five years the list of references contains many Russian names which may be unknown to Western readers However the list also includes world classical scientists who devoted their works to mathematical methods in economics In this monograph an attentive reader will find numerous points for further analysis which can become a subject of publications or theses In some cases the text is conducted in a polemic manner that is the author is always open for discussions and does not consider his work to be the ultimate truth
