Making Software Teams Effective Chaehan So,2010 How does good teamwork emerge Can we control mechanisms of teamwork The author has analyzed these questions in a study involving 227 participants of 55 software development teams First he empirically confirmed his teamwork model based on innovation research goal setting and control theory Second he measured the impact of a wide selection of agile practices on these teamwork mechanisms Third he explained these impacts based on a thorough review of current psychological research This book is intended for people working in agile contexts as they will gain insight into the complexity of how good teamwork emerges This insight on team dynamics may also prove valuable for upper management for calibrating agile practices and soft factors thus increasing the effectiveness of software teams

Encyclopaedia of Mathematics Michiel Hazewinkel,2013-12-01 This ENCYCLOPAEDIA OF

MATHEMATICS aims to be a reference work for all parts of mathematics. It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985. The annotated translation consists of ten volumes including a special index volume. There are three kinds of articles in this ENCYCLOPAEDIA. First of all, there are survey-type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up-to-date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole, these articles should be understandable to mathematics students in their first specialization years, to graduates from other mathematical areas, and depending on the specific subject, to specialists in other domains of science, engineers and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems, techniques and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article of medium length contains more detailed concrete problems, results and techniques. *NASA Technical Translation*, 1967

Model Risk In Financial Markets: From Financial Engineering To Risk Management Radu Sebastian Tunaru, 2015-06-08. The financial systems in most developed countries today build up a large amount of model risk on a daily basis. However, this is not particularly visible as the financial risk management agenda is still dominated by the subprime liquidity crisis, the sovereign crises and other major political events. Losses caused by model risk are hard to identify and even when they are internally identified as such, they are most likely to be classified as normal losses due to market evolution. *Model Risk in Financial Markets: From Financial Engineering to Risk Management* seeks to change the current perspective on model innovation, implementation and validation. This book presents a wide perspective on model risk related to financial markets, running the gamut from financial engineering to risk management, from financial mathematics to financial statistics. It combines theory and practice, both the classical and modern concepts being introduced for financial modelling. Quantitative finance is a relatively new area of research and much has been written on various directions of research and industry applications. In this book, the reader gradually learns to develop a critical view on the fundamental theories and new models being proposed. *Introduction to probability and statistics from a Bayesian viewpoint* Dennis Victor Lindley, 1965 **NASA Technical Note**, 1969 *DAISY--an Efficient Program for Production of Neutron Pseudo Resonance Parameter Chains in the Unresolved Energy Region* Thor T. Semler, 1970

Statistics for Experimentalists B. E. Cooper, 2014-05-09. *Statistics for Experimentalists* aims to provide experimental scientists with a working knowledge of statistical methods and search approaches to the analysis of data. The book first elaborates on probability and continuous probability distributions. Discussions focus on properties of continuous random variables and normal variables, independence of two random variables, central moments of a continuous distribution.

prediction from a normal distribution binomial probabilities and multiplication of probabilities and independence The text then examines estimation and tests of significance Topics include estimators and estimates expected values minimum variance linear unbiased estimators sufficient estimators methods of maximum likelihood and least squares and the test of significance method The manuscript ponders on distribution free tests Poisson process and counting problems correlation and function fitting balanced incomplete randomized block designs and the analysis of covariance and experimental design The publication is a valuable reference for statisticians and researchers interested in the use of statistical methods

Statistical Methods in Radio Wave Propagation W. C. Hoffman, 2013-10-22 *Statistical Methods in Radio Wave Propagation* contains the proceedings of a symposium held at the University of California Los Angeles on June 18 20 1958 The papers explore the use of statistical techniques in the analysis and interpretation of data pertaining to the propagation of radio waves The discussion is organized around three themes statistical theory and methodology radio propagation phenomena having a joint statistical and physical structure and instrumentation This book is comprised of 23 chapters and begins by summarizing the principal results of a series of statistical studies on the intensity distributions due to rapid fading The reader is then introduced to some theoretical investigations on fading phenomena radio measurement of ionospheric drift as a problem in parameter estimation the propagation of random radiation in free space and the statistics of working spells and periods of breakdown for a number of radio links in series The remaining chapters deal with airborne measurements of tropospheric index of refraction fluctuations the distribution of the fade lengths of a randomly fading radio signal diversity statistics in scatter propagation and extrapolation of spatial correlation functions The final chapter describes a rapid statistical data processing system for radio propagation research This monograph will be a useful resource for both radio scientists and statisticians
