Mathematical Modelling For Polymer Processing Polymerization Crystallization Manufacturing:

Mathematical Modelling for Polymer Processing Vincenzo Capasso, 2003 A large amount of relevant mathematical problems arise from the polymer industry with respect to the quality of manufactured polymer parts This book provides the first unified presentation of the mathematical modeling of polymerization crystallization and extrusion of polymer melts by means of advanced methods presented in an accessible way for applied scientists and engineers

Mathematical Modelling for Polymer Processing Vincenzo Capasso, 2012-12-06 Polymers are substances made of macromolecules formed by thousands of atoms organized in one homopolymers or more copolymers groups that repeat themselves to form linear or branched chains or lattice structures The concept of polymer traces back to the years 1920 s and is one of the most significant ideas of last century It has given great impulse to industry but also to fundamental research including life sciences Macromolecules are made of small molecules known as monomers The process that brings monomers into polymers is known as polymerization A fundamental contribution to the industrial production of polymers particularly polypropylene and polyethylene is due to the Nobel prize winners Giulio Natta and Karl Ziegler The ideas of Ziegler and Natta date back to 1954 and the process has been improved continuously over the years particularly concerning the design and shaping of the catalysts Chapter 1 due to A Fasano is devoted to a review of some results concerning the modelling of the Ziegler Natta polymerization The specific example is the production of polypropylene The process is extremely complex and all studies with relevant mathematical contents are fairly recent and several problems are still open

Modeling, Simulation and Optimization of Complex Processes Hans Georg Bock, Ekaterina Kostina, Xuan Phu Hoang, Rolf Rannacher, 2008-06-19 This proceedings volume covers the broad interdisciplinary spectrum of scientific computing and presents recent advances in theory development of methods and applications in practice

Free Boundary Problems Pierluigi Colli, Claudio Verdi, Augusto Visintin, 2012-12-06 Many phenomena of interest for applications are represented by differential equations which are defined in a domain whose boundary is a priori unknown and is accordingly named a free boundary A further quantitative condition is then provided in order to exclude indeterminacy Free boundary problems thus encompass a broad spectrum which is represented in this state of the art volume by a variety of contributions of researchers in mathematics and applied fields like physics biology and material sciences Special emphasis has been reserved for mathematical modelling and for the formulation of new problems

Progress in Industrial Mathematics at ECMI 2006 Luis L. Bonilla, Miguel Moscoso, Gloria Platero, Jose M. Vega, 2007-12-24 Proceedings from the 14th European Conference for Mathematics in Industry held in Madrid present innovative numerical and mathematical techniques Topics include the latest applications in aerospace information and communications materials energy and environment imaging biology and biotechnology life sciences and finance In addition the conference also delved into education in industrial mathematics and web learning

Topics in Spatial Stochastic Processes Vincenzo Capasso, 2003-01-21 The

theory of stochastic processes indexed by a partially ordered set has been the subject of much research over the past twenty years The objective of this CIME International Summer School was to bring to a large audience of young probabilists the general theory of spatial processes including the theory of set indexed martingales and to present the different branches of applications of this theory including stochastic geometry spatial statistics empirical processes spatial estimators and survival analysis This theory has a broad variety of applications in environmental sciences social sciences structure of material and image analysis In this volume the reader will find different approaches which foster the development of tools to modelling the spatial aspects of stochastic problems **Mathematical Modelling for Polymer Processing** Vincenzo

Multidisciplinary Approaches in the Study and Care of the Human Eye P. Causin,G. Guidoboni,R. Sacco,A. Harris,2014-12-17 ForewordThe human eye offers the extraordinary possibility to visualize and monitor non invasively in vivo in humans many morphological and haemodynamical features Therefore a large amount of data on ocular structures and macro and micro circulation can be obtained in a clinical setting during a patient s visit However the interpretation of these data remains a very challenging task since the understanding of the physiology bio mechanics and fluid dynamics of the human eye remains scarce This unmet gap between the availability of imaging data and their elusive clinical interpretatio
