**Mathematical Themes** Allan Gray, Carol Gray, 1996      A Remarkable Collection of Babylonian Mathematical Texts Jöran Friberg, 2007-10-01 The sub collection of mathematical cuneiform texts in the Sch y en Collection makes a substantial addition to the known corpus of such texts It contains 121 texts not counting 151 multiplication tables and 53 small weight stones According to the catalog at the end of the Index of Subjects below where those 121 mathematical texts are ordered by content nearly all known kinds and some new kinds of mathematical cun form texts are represented in the collection Therefore it has been possible to organize the present work as a broad general account of Mesopotamian mathematics illustrated mainly by texts from the Sch y en Collection but occasionally also by previously published texts The general disposition of the book is borrowed from my own concise but comprehensive survey of Mesopotamian mathematics in the article on Mathematics in Reallexikon der Assyriologie vol 7 1990 My ambition has been to make the account easily accessible to all kinds of readers yet still as detailed and exhaustive as possible For that purpose there is for instance an introductory Chapter 0 on how to get a b ter understanding of mathematical cuneiform texts The chapter begins with a discussion of the danger of unintentional anachronisms in translations of pre Greek mathematical texts and continues with a presentation of the kind of conform transliterations translations and interpretations true to the original that will be used throughout the book in discussions of individual texts

**Borders in Mathematics Pre-Service Teacher Education** Nenad Radakovic, Limin Jao, 2020-05-22 This book examines the current state of the field of mathematics pre-service teacher education through the theme of borders. Borders are ubiquitous; they can be used to define, classify, organize, make sense of, and/or group. There are many ways that the concept of a border illuminates the field of mathematics pre-service teacher education. Consequently, there are a multitude of responses to these borders: researchers and practitioners question, challenge, cross, blur, and erase them. Chapters include the following topics: explorations of mathematics across topics (e.g., geometry, algebra, probability) and with other disciplines (e.g., science, the arts, social sciences); challenging gender, cultural, and racial borders; exploring the structure and curriculum of teacher education programs; spaces inhabited by teacher education programs (e.g., university, community, and international collaborations); and programs to promote cross-cultural sharing and learning. The book targets a readership of researchers and graduate students in integrated education studies, teacher education practitioners, of mathematics education curriculum developers, and educational administrators and policy makers.

**Philosophy, Learning and the Mathematics Curriculum** Xuehui Xie, Phil Francis Carspecken, 2019-02-18 Mathematics curricula used in progressive classrooms of the United States and in classrooms of the People's Republic of China presuppose markedly different philosophies. Xie and Carspecken reconstruct different assumptions operating implicitly within mathematics curricula developed by the Ministry of Education in China and NCTM in the United States. Each curriculum is constructed upon a deep structure holistically integrating presuppositions about the nature of the human self, society, learning processes, language, concepts, human development, freedom, authority, and the epistemology and ontology of mathematical knowledge. Xie and Carspecken next present an extended discussion of the two main philosophical traditions informing these curricula: dialectical materialism in the case of the Chinese mathematics curriculum and Dewey's instrumental pragmatism in the case of NCTM. Both philosophies were developed as movements out of Hegelian idealism while retaining the anti-dualist and anti-empiricist insights of Hegel's thought. The history of dialectical materialism and Dewey's instrumentalism is carefully examined by the authors to identify both similarities and sharp differences in the resulting mature philosophies. Drawing upon more recent philosophies of intersubjectivity (Brandom, Habermas) and dialectical materialist psychologies (Vygotsky, Luria), the authors conclude this book with arguments for overcoming the limitations of a purely instrumentalist framework and for expanding potentialities implicit within dialectical philosophies. This book will be of value to a broad audience including mathematics educators, philosophers, curriculum theorists, social theorists, and those who work in comparative education and learning science.
