Mathematical Thinking about Politics George Robert Boynton,1980 **Political Science in Theory and Practice:**
The Politics Model Kris E Lane,2020-11-25 This text demonstrates that there is a politics model that unifies the discipline and structures its relationship to the other social sciences It shows how this model underlies important works of applied research in all the main political science subfields The Fractured Metropolis Gregory R. Weiher,1991-07-03 Political Science in Theory and Practice Ruth Lane,1997 This text demonstrates that there is a politics model that unifies the discipline and structures its relationship to the other social sciences It shows how this model underlies important works of applied research in all the main political science subfields **The Qualitative-Quantitative Distinction in the Social Sciences** B. Glassner,J.D. Moreno,2013-11-27 Without of course adopting a Platonic metaphysics the eighteenth century philosophes were Grecophiles who regarded the Athenian philosophers as their intellectual forbearers and mentors So powerful was their identification with classification that ancient ideas were taken as keys to the design of the modern world but usually the ideas were taken separately and as divided from their systematic context The power of number was an idea the Enlightenment thinkers deployed with their legendary passion and vigor particularly as an instrument for social reconstruction It is no exaggeration to say that the role of quantities in contemporary social scientific theorizing cannot be understood with any depth absent a recollection of the philosophes axial development of the notion of quantification It is a commonplace that for the philosophes progress required releasing human abilities to have power over nature A prerequisite for this power was knowledge of the underlying causes of natural events knowledge that required quantitative precision Enlightenment thinkers were sufficiently aware of themselves as products of their time to appreciate the importance of a liberal social environment to the knowledge enterprise the supposition that the reverse is also the case that enhanced knowledge could advance social conditions came easily **Dynamic Modeling** R. Robert Huckfeldt,Kenneth Ewart Boulding,Carol W. Kohfeld,Thomas W. Likens,1978 Outlines the theory behind and techniques for using dynamic modeling taking the reader through a series of increasingly complex models At each step examples are used to clarify applications of different equation models **The Dynamics of Enduring Rivalries** Paul Francis Diehl,1998 It is hard to think of Israel without also remembering the country's long standing problems with its Arab neighbors Similarly India and Pakistan have long been less than cordial to each other The concept of enduring rivalries and conflicts tantamount to militarized competition between two states is rapidly emerging as a subject of research in international relations The nine contributors to *The Dynamics of Enduring Rivalries* place the concept in its empirical and theoretical context exploring how such rivalries arise what influences their development and when and how they may escalate to war **UMAP Modules** ,1981

Mathematical Modelling D. N. P. Murthy,N. W. Page,Ervin Y. Rodin,1990 The critical step in the use of mathematics for

solving real world problems is the building of a suitable mathematical model This book advocates a novel approach to the teaching of the building process for mathematical models with emphasis on the art as well as the science aspects Using a case study approach the book teaches the mathematical modelling process in a comprehensive framework presenting an overview of the concepts and techniques needed for modelling The book is structured in three parts the first dealing with the science aspect the second dealing with the art aspects and the third combining self learning exercises for the student and supplementary resource material for the instructor **Methodology for Political Science Research** Mary A. Zinnes,1982 Gillespie presents a collection of essays that consider missing elements in four key areas of political analysis Two concepts precision and coherence are introduced to help deal with the staggering number of variables in political life which make formal modelling so difficult Missing elements in dynamic models in linkage models and in integrative models are also identified and new approaches and solutions for work in political studies suggested **Journal of Social and Behavioral Sciences** ,1980
