## **Mathematics For Every Young Child:**

**Engaging Young Children in Mathematics** Douglas H. Clements, Julie Sarama, 2004 Engaging Young Children in Mathematics Standards for Early Childhood Mathematics Education brings together the combined wisdom of a diverse group of experts involved with early childhood mathematics. The book originates from the landmark 2000 Conference on Standards for Pre kindergarten and Kindergarten Mathematics Education attended by representatives from almost every state developing standards for young children's mathematics: federal government officials, mathematicians, mathematics educators, researchers from mathematics education, early childhood education, and psychology; curriculum developers, teachers, policymakers, and professionals from organizations such as the National Conference of Teachers of Mathematics and the National Association for the Education of Young Children. The main goal of the Conference was to work collectively to help those responsible for framing and implementing early childhood mathematics standards. Although it has its roots in the Conference, the expanded scope of the standards and recommendations covered in this book includes the full range of kindergarten to grade 2. The volume is organized into two main parts and an online appendix: <http://www.gse.buffalo.edu/org/conference>. Part One, Major Themes and Recommendations, offers a framework for thinking about pre-kindergarten/grade 2 mathematics education and specific recommendations. Part Two, Elaboration of Major Themes and Recommendations, provides substantive detail regarding young students' understandings of mathematical ideas. Each Part includes five parallel subsections: Standards in Early Childhood Education, Math Standards and Guidelines, Curriculum, Learning, Teaching, and Assessment, Professional Development, and Toward the Future Implementation and Policy. As a whole, the book presents comprehensive summaries of research that provide specific guidelines for standards, curriculum, and teaching; takes the recent reports and recommendations for early childhood mathematics education to the next level; integrates practical details and research throughout; and provides a succinct but thorough review of research on the topics: sequences and learning trajectories that children can and should learn at each of their first years of life with specific developmental guidelines that suggest appropriate content for each topic for each year from 2-year-olds to 7-year-olds. This is an indispensable volume for mathematics educators, researchers, curriculum developers, teachers, and policymakers, including those who create standards, scope and sequences, and curricula for young children and professional teacher development materials and students in mathematics education, early childhood trainers, teacher educators, and faculty in mathematics education.

Understanding Children's Mathematical Graphics: Beginnings in Play Elizabeth Carruthers, Maulfry Worthington, 2011-04-16 This book challenges traditional beliefs and practices of teaching written mathematics in early childhood. It gives theoretical underpinnings and offers exciting insights and context to children's early mathematical thinking and, in particular, into children's mathematical graphics, showing how this supports their understanding of the abstract symbolic language of mathematics. Drawing on a wide range of examples, it illustrates and explains how children explore and communicate their

mathematical thinking through their mathematical graphics and how this begins in play The book looks at the power of children's own marks symbols and other graphical representations to convey meanings exploring how they support complex thinking The authors explore the relationship between children's play and meaning making Rather than viewing mathematics as a separate subject or as a set of basic skills to be transmitted they demonstrate that in supportive learning cultures children develop their own mathematical thinking to solve problems Key features include Numerous new examples and case studies of children from birth to 8 years highlighting the complexity and richness of children's thinking Explanation of pedagogical issues showing how they can support rich play and mathematics Draws on the authors latest research This book is valuable reading for students teachers primary mathematics coordinators and all early years professionals working in the Early Years Foundation Stage and Key Stage One

The authors explain the development and range of young children's mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods. Combining theory and practice, this acclaimed book demonstrates how children's own mathematical graphics are highly creative and show deep levels of thinking. The authors show how this is the key to success in school mathematics and to higher levels of achievement. The authors are winners of TACTYC's 2003 Jenefer Joseph Award for the Creative Arts 3-8 awarded for their innovative work with children on mathematical graphics. **Handbook of**

**International Research in Mathematics Education** Lyn D. English, David Kirshner, 2010-04-02 This book brings together mathematics education research that makes a difference in both theory and practice, research that anticipates problems and needed knowledge before they become impediments to progress. Early Childhood Curriculum for All Learners Ann M.

Selmi, Raymond J. Gallagher, Eugenia R. Mora-Flores, 2014-08-12 Early Childhood Curriculum for All Learners Integrating Play and Literacy Activities is designed to teach early childhood professionals about the latest research on play and early literacy and then to show them practical methods for adapting this research to everyday classroom practices that will encourage the development of learning skills. The authors link solid play-based research to specific developmentally appropriate practices. By combining these two areas, the text demonstrates that academic learning and play activities are highly compatible and that children can and do develop academic skills through play. In addition, the text focuses on socio-dramatic play, a recently acknowledged essential aspect of child-initiated play interactions. It provides specific strategies that link these interactive behaviors with the early academic skills needed for the initial primary grades. Implementation of the information presented in this book will enable children to experience a richer transition into primary education classrooms.

MacDonald, Ann Gervasoni, 2015-01-09 This edited book brings together for the first time an international collection of work focused on two important aspects of any young child's life learning mathematics and starting primary or elementary school. The chapters take a variety of perspectives and integrate these two components in sometimes explicit and sometimes more subtle ways. The key issues and themes explored in this book are the mathematical and other strengths that all participants in the transition to school bring to this period of a child's life, the opportunities provided by transition to school for young children's mathematics learning, the importance of partnerships among adults and among adults and children for effective school transitions and mathematics learning, and teaching the critical impact of expectations on their mathematics learning as children start school, the importance of providing children with meaningful challenging and relevant mathematical experiences throughout transition to school, the entitlement of children and educators to experience assessment and instructional pedagogies that match the strengths of the learners and the teachers, the importance for the aspirations of children, families, communities, educators and educational organisations to be recognised as legitimate and key determinants of actions, experiences and successes in both transition to school and mathematics learning, and the belief that young children are powerful mathematics learners who can demonstrate this power as they start school. In each chapter authors reflect on their work in the area of mathematics and transition to school, place that work within the overall context of research in these fields, predict the trajectory of this work in the future and consider the implications of the work both theoretically and practically.
