Mathematics For The Young Child:

Engaging Young Children in Mathematics Douglas H. Clements, Julie Sarama, Associate Editor DiBiase, Ann-Marie DiBiase, 2003-10-17 This book consists of conclusions drawn from the expertise shared at the Conference on Standards for Prekindergarten and Kindergarten Mathematics Education. It offers substantive detail regarding young students' understandings of mathematical ideas.

Showcasing Mathematics for the Young Child Juanita V. Copley, 2004 Written for all teachers of young children, this book illustrates activities that promote early mathematics development for children ages three to five and showcases mathematics for the young child. The thirty-five activities in this book are distributed into five content areas: number and operations, geometry, algebra, measurement, and data analysis. The content areas are connected by a continuing story: Hanny the Honey Bear Discovers the World of Mathematics in the Big Zoo. Teachers can use this book to help themselves teach mathematics, learn mathematics, and most important, listen to children think.

Mathematics for the Young Child Joseph Neal Payne, *Math & Science for Young Children* Rosalind Charlesworth, Karen Lind, 2009-02-09 MATH AND SCIENCE FOR YOUNG CHILDREN 6th Edition is a unique text that focuses on the integration of math and science along with the other important areas of child development during the crucial birth through eight age range. It also carefully addresses the ever-changing and important national standards. The National Association for the Education of Young Children (NAEYC), National Council of Teachers of Math (NCTM), National Science Teachers Association (NSTA), American Association for the Advancement of Science (AAAS), and the National Research Council (NRC). Both math and science are presented from a common conceptual framework, and problem solving is emphasized as the major means for constructing concepts. The systematic approach of the book promotes developmentally appropriate assessment through observation, documentation of records, audio and video use, performance evaluations, and student portfolios. This text covers the use of literature and the promotion of the written language with an emphasis on dramatic play and provides information regarding materials and resources as well as parent involvement. With the units developed sequentially from pre-kindergarten to primary level, the book is easy and logical to follow. The Young Child and Mathematics Juanita V. Copley, 2010 Reflects recent developments in math education using vignettes from classrooms, activity ideas, and strategies for teaching young children about math processes and concepts. Incorporates standards and guidelines from NCTM and NAEYC.

Teaching Young Children Mathematics Sydney L. Schwartz, 2005-09-30 Children learn mathematics most effectively in contexts that are meaningful to them. Realizing the potential of these contexts for fostering young children's mathematical learning while nurturing and challenging them requires knowledge of mathematics as well as of child development. Avoiding the debates surrounding hands-on learning vs. direct instruction, the author focuses on the value of different contexts for learning and illustrates ways to genuinely engage

children as active learners The work is rich with examples of children's interactions with each other and with adults as they utilize and extend their understanding of mathematics Examples and guidelines for developing lessons and activities will be useful to educators and parents Chapters explore how we underestimate young children's mathematical capabilities how appropriate sequencing of learning and building on prior knowledge will enhance understanding what teachers including parent teachers need to know and high stakes testing This is a work that brings together the connections between knowing the basics and constructing knowledge in accessible and practical ways *Experiences in Math for Young Children* Rosalind Charlesworth, 1996 Section 1 describes how math concepts are developed acquired promoted and assessed Section 2 describes fundamental concepts of counting number sets shape space parts and whole Section 3 includes applications measuring volume weight length temperature graphs and time It also includes thematic units Section 4 describes higher level activities symbols and sets Section 5 includes concepts patterns fractions geometry graphs charts and standard units of measure
