Engineering and Sciences Teaching and Learning Activities Samsul Ariffin Abdul Karim,Saiful Azmi Husain,2021-08-25 This book comes from genuine research from various universities in Asia such as in South East Asia and India Since COVID 19 pandemic is spreading all over the world most schools and institutions of higher learning have opted online based learning for their teaching and learning T L activities Previously the common practices in T L are face to face F2F Therefore online T L is a new normal not just for the students but also for the instructors as well as the parents In this book different online teaching methods via technology supported teaching have been implemented and at the end of the lesson based on the feedback from students on these online technology supported teaching tools most educators found that there are positive responses from majority of students in terms of their learning attitudes thinking and decision making process apart from the challenges faced by the students in the beginning with regards to the new approaches and methodology used by their teachers during online teaching There are eight contributed chapters in this book covering secondary school level curriculum up to higher institutional level curriculum that forming a new system of T L for post COVID 19 pandemic The topics under consideration include active learning AL and cooperative learning CL for T L task based instruction TBI transition students adaptability to post COVID 19 creative and innovative teaching methods for secondary school level mathematics project based learning PPBL for geophysics and impact of Socratic method and SOLO taxonomy This book is suitable for postgraduate students teachers instructor educational researchers as well as policy makers in education and other scientists who are dedicated in teaching and educate students

**Network Bioscience, 2nd Edition** Marco Pellegrini,Marco Antoniotti,Bud Mishra,2020-03-27 Network science has accelerated a deep and successful trend in research that influences a range of disciplines like mathematics graph theory physics statistics data science and computer science just to name a few and adapts the relevant techniques and insights to address relevant but disparate social biological technological questions We are now in an era of big biological data supported by cost effective high throughput genomic transcriptomic proteomic metabolomic data collection techniques that allow one to take snapshots of the cells molecular profiles in a systematic fashion Moreover recently also phenotypic data data on diseases symptoms patients etc are

being collected at nation wide level thus giving us another source of highly related causal big data This wealth of data is usually modeled as networks aka binary relations graphs or webs of interactions including protein protein metabolic signaling and transcription regulatory interactions The network model is a key view point leading to the uncovering of mesoscale phenomena thus providing an essential bridge between the observable phenotypes and omics underlying mechanisms Moreover network analysis is a powerful hypothesis generation tool guiding the scientific cycle of data gathering data interpretation hypothesis generation and hypothesis testing A major challenge in contemporary research is the synthesis of deep insights coming from network science with the wealth of data often noisy contradictory incomplete and difficult to replicate so to answer meaningful biological questions in a quantifiable way using static and dynamic properties of biological networks
