

Mathematics should be motivating and interesting (Sparrow, 1994)

“When students are genuinely engaged in solving mathematical problems that make sense to them, the learning they take away from that experience is likely to be deep and lasting” (Reys, 2009 p. 39).

Character for Better Learning David Shattock, 2023-09-22 Mathematics is not a universally popular subject neither within nor outside of school There are those who love it but many do not and it is not uncommon for people to take a perverse pride in being bad at it This book argues that while much needed improvements to mathematics teaching are necessary to address such issues they are insufficient without also imbuing children with the character required to learn it effectively Teachers of mathematics are responsible not only for applying skilful pedagogy but also for developing a productive learning culture within the mathematics classroom We need to consider the emotional and social impact on children of teachers own attitudes and beliefs about mathematics and how children should be taught it Sometimes provocative and irreverent but always stimulating and lucid Presenting Children to Maths is an original and profound discussion about how students ability and success in mathematics depends largely on how their disposition and will are shaped towards learning it **Learning to**

Computational Experiment Approach to Advanced Secondary Mathematics Curriculum Sergei Abramovich,2014-05-08 This book promotes the experimental mathematics approach in the context of secondary mathematics curriculum by exploring mathematical models depending on parameters that were typically considered advanced in the pre digital education era This approach by drawing on the power of computers to perform numerical computations and graphical constructions stimulates formal learning of mathematics through making sense of a computational experiment It allows one in the spirit of Freudenthal to bridge serious mathematical content and contemporary teaching practice In other words the notion of teaching experiment can be extended to include a true mathematical experiment When used appropriately the approach creates conditions for collateral learning in the spirit of Dewey to occur including the development of skills important for engineering applications of mathematics In the context of a mathematics teacher education program the book addresses a call for the preparation of teachers capable of utilizing modern technology tools for the modeling based teaching of mathematics with a focus on methods conducive to the

improvement of the whole STEM education at the secondary level By the same token using the book's pedagogy and its mathematical content in a pre college classroom can assist teachers in introducing students to the ideas that develop the foundation of engineering profession

Resources for Teaching Mathematics: 14-16 Colin Foster, 2010-08-05 This book contains 70 ready to use mathematics lessons suitable for students aged 14-16 Some lessons offer alternative routes through the curriculum such as practising indices by solving radical equations while others concentrate on difficult ideas like appreciating that not all mathematical relationships are linear Each plan consists of a teacher's sheet providing the aims and objectives of the lesson a lesson starter main phase plenary and homework ideas each with suggested timeframes guidance on how to adapt the activities to cater for students working at different levels and online resources including links to useful websites material to display on the whiteboard and additional ideas Each plan also includes a photocopiable or downloadable student task sheet that corresponds to the teacher's sheet The lessons focus on problem solving and putting mathematics into context and are an essential resource for any busy teacher of mathematics

Counterexamples in Calculus Sergiy Klymchuk, 2010-12-31 Counterexamples in Calculus serves as a supplementary resource to enhance the learning experience in single variable calculus courses This book features carefully constructed incorrect mathematical statements that require students to create counterexamples to disprove them Methods of producing these incorrect statements vary At times the converse of a well known theorem is presented In other instances crucial conditions are omitted or altered or incorrect definitions are employed Incorrect statements are grouped topically with sections devoted to Functions Limits Continuity Differential Calculus and Integral Calculus This book aims to fill a gap in the literature and provide a resource for using counterexamples as a pedagogical tool in the study of introductory calculus

Debates in Mathematics Education Gwen Ineson, Hilary Povey, 2020-06-15 This new and updated second edition of Debates in Mathematics Education explores the major issues that mathematics teachers encounter in their daily lives By engaging with established and contemporary debates this volume promotes and supports critical reflection and aims to stimulate both novice and experienced teachers to reach informed judgements and argue their point of view with deeper theoretical knowledge and understanding Divided into five accessible sections this book investigates and offers fresh insight into topics of central importance in mathematics education with this second edition including new discussions and chapters on Classic and contemporary issues of pedagogy politics philosophy and sociology of mathematics education International comparisons of achievement Digital technologies for teaching Mastery in mathematics Pop culture and mathematics Whether mathematics can be harmful Designed to stimulate discussion and support you in your own research writing and practice through suggested questions and activities throughout Debates in Mathematics Education will be a valuable resource for any student or practising teacher and those engaged in initial teacher education continuing professional development or Master's level study This book also has much to offer to those leading mathematics departments in schools and initial teacher education programmes and to beginning doctoral

students looking for a survey of the field of mathematics education research *Resources for Teaching Mathematics: 11-14* Colin Foster, 2011-09-22 This resource contains 50 ready to use mathematics lesson plans suitable for the whole department to use with learners aged 11-14. Each plan consists of a teacher's sheet which breaks down the lesson into time allocated sections from starter through to homework together with a photocopiable or downloadable student task sheet to give out. There is also a companion website with extra material to support the lesson plans in the book giving teachers the time and confidence to try new activities in the classroom with minimal preparation. The lesson tasks are open ended and encourage deep mathematical thinking allowing learners to explore different topics creatively through solving problems in their own way. This is an essential resource for any busy teacher of mathematics.

The Learning and Development of Mathematics Teacher Educators Merrilyn Goos, Kim Beswick, 2021-04-07 Research in mathematics teacher education as a distinctive field of inquiry has grown substantially over the past 10-15 years. Within this field there is emerging interest in how mathematics teacher educators (MTEs) themselves learn and develop. Until recently there were few published studies on this topic and the processes by which mathematics teacher educators learn and the forms of knowledge they require for effective practice had not been systematically investigated. However, researchers in mathematics education are now beginning to investigate the development of MTE expertise and associated issues. This volume draws on the latest research and thinking in this area and is therefore timely to stimulate future development and directions. It will survey the emerging field of inquiry in mathematics education combining the work of established scholars with perspectives of newcomers to the field with the aim of influencing development of the field, invite cross-cultural comparisons in becoming a mathematics teacher educator by highlighting issues in the development of MTEs in different countries and examine the roles of both mathematics educators and mathematicians in preparing future teachers of mathematics. The primary audience will be university-based mathematics teacher educators and MTE researchers and postgraduate research students who are seeking academic careers as MTEs. Additional interest may come from teacher educators in disciplines other than mathematics and education policy makers responsible for accreditation and quality control of initial teacher education programs.

Mathematics Teacher Education A.J. Dawson, Barbara Jaworski, Terry Wood, 2003-09-02 Currently there is substantial exchange and communication between academic communities around the world as researchers endeavour to discover why so many children fail at a subject that society deems crucial for future economic survival. This book charts current thinking and trends in teacher education around the world and looks critically at the inservice education of maths teachers. The contributors explore the processes, practices and issues in teacher education projects in ten countries and these are then discussed and related to current philosophies of teacher education. The book provides an insight into the successes and shortcomings of many different approaches to maths education.

Fundamental Constructs in Mathematics Education Sue Johnston-Wilder, John Mason, 2004-01-22 *Fundamental Constructs in Mathematics Education* is a unique sourcebook which

has been crafted from a collection of classic tasks extracts and texts that have been quoted repeatedly in mathematics education literature Linked together by the editors narrative the book provides a fascinating examination of key constructs in mathematics education The book is divided into two parts The first part examines thinking about the learner and includes the following constructs constructivisms activity theory and didactics Beginning with a chapter dedicated to the classic tasks used by researchers to probe learners understanding readers are encouraged to try these theories themselves with learners and be knowledgeable when they encounter them in other writing The second part focuses on thinking and teaching and includes issues of getting started keeping going and bringing to a conclusion Bringing together writing from Balacheff Brousseau Bruner Cobb Comfrey Freudenthal Greeno Marton Piaget Schon Vygotsky and many others this unique examination of constructs in mathematics education will be a valuable resource for anyone reading literature related to learning mathematics be they a teacher adviser or a student on a masters or PhD course

The Brilliance of Black Children in Mathematics Jacqueline Leonard, Danny B. Martin, 2013-03-01 This book is a critically important contribution to the work underway to transform schooling for students who have historically been denied access to a quality education specifically African American children The first section of the book provides some historical perspective critical to understanding the current state of education in the U S specifically for the education of African American children The following sections include chapters on policy learning ethnomathematics student identity and teacher preparation as it relates to the mathematical education of Black children Through offering counternarratives about mathematically successful Black youth advocating for a curriculum that is grounded in African American culture and ways of thinking providing shining examples of the brilliance of Blacks students and promoting high expectations for all rather than situating students as the problem the authors of this book provide powerful insights related to the teaching and learning of mathematics for African American students As is made evident in this book effective teaching involves much more than just engaging students in inquiry based pedagogy Kitchen 2003 The chapters offered in this book demonstrate how mathematics instruction for African American students needs to take into account historical marginalization and present day policies that do harm to Black students Kunjufu 2005 Empowering mathematics instruction for African American students needs to take into consideration and promote students cultural spiritual and historical identities Furthermore mathematics instruction for African American students should create opportunities for students to express themselves and the needs of their communities as a means to promote social justice both within their classrooms and communities
