**Engaging Young Children in Mathematics** Douglas H. Clements, Julie Sarama, Associate Editor DiBiase, Ann-Marie DiBiase, 2003-10-17 This book consists of conclusions drawn from the expertise shared at the Conference on Standards for Prekindergarten and Kindergarten Mathematics Education. It offers substantive detail regarding young students' understandings of mathematical ideas. **Mathematics Experiences for the Early Childhood Years** Linda Barron, 1979

*More Than Counting* Sally Moomaw, Brenda Hieronymus, 2011-02-08 More than one hundred math activities for young children that incorporate early learning standards. **Early Childhood Education** Petr G. Grotewell, Yanus R. Burton, 2008 This book focuses on early childhood education which spans the human life from birth to age 8. Infants and toddlers experience life more holistically than any other age group. Social, emotional, cognitive, language, and physical lessons are not learned separately by very young children. Adults who are most helpful to young children interact in ways that understand that the child is learning from the whole experience, not just that part of the experience to which the adult gives attention. Although early childhood education does not have to occur in the absence of the parent or primary caregiver, this term is sometimes used to denote education by someone other than these. The parent or primary caregiver. Both research in the field and early childhood educators view the parents as an integral part of the early childhood education process. Early childhood education takes many forms depending on the theoretical and educational beliefs of the educator or parent. Other terms that is often used interchangeably with early childhood education are early childhood learning, early care, and early education. Much of the first two years of life are spent in the creation of a child's first sense of self or the building of a first identity. Because this is a crucial part of children's makeup, how they first see themselves, how they think they should function, how they expect others to function in relation to them, early care must ensure that, in addition to carefully selected and trained caregivers, links with family, home culture, and home language are a central part of program policy. If care becomes a substitute for rather than a support of family, children may develop a less than positive sense of who they are and where they come from because of their child care experience. **Mathematics in Early Childhood** Oliver Thiel, Elena Severina, Bob Perry, 2020-11-05 Structured around Bishop's six fundamental mathematical activities, this book brings together examples of mathematics education from a range of countries to help readers broaden their view on maths and its interrelationship to other aspects of life. Considering different educational traditions and diverse contexts and illustrating theory through the use of real-life vignettes throughout, this book encourages readers to review, reflect on, and critique their own practice when conducting activities on explaining, counting, measuring, locating, designing, and playing. Aimed at early childhood educators and practitioners looking to improve the mathematics learning experience for all their students, this practical and accessible guide provides the knowledge and tools to help every child. **Mathematics Learning in Early Childhood** National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Early

**Language, Learning, and Culture in Early Childhood** Ann Anderson, Jim Anderson, Jan Hare, Marianne McTavish, 2015-12-07 Complex factors affect young children and their families in today's increasingly diverse world characterized by globalization the transnational movement of people and neo liberal government policies in western and industrialized countries This book focuses on three of these factors culture language and learning and how they affect

children's development and learning in the context of their communities, families and schools. Taking an ecological perspective, it challenges normative and hegemonic views of young children's language literacy and numeracy development and offers examples of demonstrated educational practices that acknowledge and build on the knowledge that children develop and learn in culturally specific ways in their homes and communities. The authors highlight issues and perspectives that are particular to Indigenous people who have been subjected to centuries of assimilationist and colonialist policies and practices and the importance of first or home language maintenance and its cognitive, cultural, economic, psychological and social benefits. **Handbook of International Research in Mathematics Education** Lyn D.

English, David Kirshner, 2010-04-02 The second edition continues the mission of bringing together important new mathematics education research that makes a difference in both theory and practice. It updates and extends the Handbook's original key themes and issues for international research in mathematics education for the 21st century, namely: priorities in international mathematics education research; lifelong democratic access to powerful mathematical ideas; advances in research methodologies; influences of advanced technologies. Each of these themes is examined in terms of learners, teachers and learning contexts, with theory development being an important component of all these aspects. This edition also examines other catalysts that have gained increased import in recent years, including a stronger focus on the teacher and teacher practice, a renewed interest in theory development, an increased focus on the mathematics needed in work place settings and a proliferation of research designs and methodologies that have provided unprecedented opportunities for investigating and ultimately improving mathematical teaching and learning. This edition includes ten totally new chapters; all other chapters are thoroughly revised and updated.

**Forging Connections in Early Mathematics Teaching and Learning** Virginia

Kinnear, Mun Yee Lai, Tracey Muir, 2017-12-12 This edited book promotes thinking, dialogue, research and theorisation on multiple ways of making connections in mathematics teaching and learning in early childhood education. The book addresses some key challenges in research, policy and practice in early childhood mathematics education. It examines diverse ways for learning experiences to connect young children to mathematics and the importance of forging connections between mathematics and young children's lives as key elements in their engagement with mathematics. Each chapter provides research or theoretical provocations and pedagogical implications for connecting children's lived experiences and ways of learning in mathematics teaching. The chapters are drawn from a range of international authors who raise important ideas within the overall context of current research and consider the theoretical and practical implications of their research. As such, the book advances current thinking on mathematics teaching and learning for children in the early years, from birth to eight years, with an emphasis on children aged birth to 5 years. It considers the purpose and value in connecting mathematics

teaching and learning to children's lives and provides provocations for both educators and researchers on the many under researched and under represented aspects of early years mathematics teaching and learning
