Mathematical Knowledge Management Andrea Asperti, Grzegorz Bancerek, Andrzej Trybulec, 2004-09-08 The International Conference on Mathematical Knowledge Management has now reached its third edition creating and establishing an original and stimulating scientific community transversal to many different fields and research topics The broad goal of MKM is the exploration of innovative semantically enriched digital encodings of mathematical information and the study of new services and tools exploiting the machine understandable nature of the information MKM is naturally

located in the border area between digital libraries and the mechanization of mathematics devoting a particular interest to the new developments in information technology and fostering their application to the realm of mathematical information. The conference is meant to be a forum for presenting, discussing and comparing new tools and systems, standardization efforts, critical surveys, large experiments and case studies. At present we are still getting to know each other to understand the work done by other people and the potentialities offered by their work to our own research activity. However, the conference is rapidly acquiring scientific strength and academic interest, attracting more and more people and research groups and offering a challenging alternative to older, more conservative conferences.

July 2004: Andrea Asperti (University of Bologna, Italy), Grzegorz Bancerek (Trybulec Organization, Poland), Andrzej Trybulec (University of Białystok, Poland) organized the MKM 2004 conference in cooperation with the Faculty of Computer Science, Białystok Technical University and the Association of Mizar Users Program Committee.

Andrew A. Adams (University of Reading, UK), Andrea Asperti (University of Bologna, Italy), Bruno Buchberger (RISC Linz, Austria), Roy McCasland (University of Edinburgh, UK), James Davenport (University of Bath, UK), William M. Stein (University of California, Berkeley, USA).

Ten years from now what do you want or expect your students to remember from your course We realized that in ten years what matters will be how students approach a problem using the tools they carry with them common sense and common knowledge not the particular mathematics we chose for the curriculum Using our text students work regularly with real data in moderately complex everyday contexts using mathematics as a tool and common sense as a guide The focus is on problems suggested by the news of the day and topics that matter to students like inflation credit card debt and loans We use search engines calculators and spreadsheet programs as tools to reduce drudgery explore patterns and get information Technology is an integral part of today's world this text helps students use it thoughtfully and wisely This second edition contains revised chapters and additional sections updated examples and exercises and complete rewrites of critical material based on feedback from students and teachers who have used this text Our focus remains the same to help students to think carefully and critically about numerical information in everyday contexts **Handbook of Digital Resources in Mathematics**
