The background of the slide is a deep blue. It features faint, stylized white line drawings of protein structures. On the left side, there is a cluster of overlapping circles, resembling a honeycomb or a cellular structure. In the center and right, there are more complex, winding lines that represent the secondary and tertiary structures of proteins, including alpha-helices and beta-sheets.

## **Matrix Metalloproteinases And Timps:**

**Matrix Metalloproteinases and TIMPs** J. F. Woessner, Jacob Frederick Woessner, Hideaki Nagase, The Kennedy Institute of Rheumatology Hideaki Nagase, 2000 The matrix metalloproteinases MMPs are a large family of enzymes that breakdown different components of the extracellular matrix Their catalytic activity is dependent a metal ion usually zinc This issue of the Protein Profiles covers the sequence information three dimensional structures activation protein substrates specificity requirements inhibition and biological roles of all the currently identified MMPs The action of these enzymes must be carefully regulated One way the cell does this is by releasing inhibitory molecules known as tissue inhibitors of metalloproteinases TIMPs This volume contains information on the sequences three dimensional structures and biological roles of the 4 known classes of TIMP Matrix metalloproteinases will therefore be an invaluable source of data for all researchers interested in MMPs and TIMPs

**Matrix Metalloproteinases in Tissue Remodelling and Inflammation** Vincent Lagente, Elisabeth Boichot, 2008-11-07 Matrix metalloproteinases MMPs are proteolytic enzymes believed to be involved in many physiological and pathological processes associated with inflammatory reactions MMP synthesis and functions are regulated by three major mechanisms including transcriptional activation post transcriptional processing and control of activity by tissue inhibitors of metalloproteinases TIMPs Many cell types have been identified as producers of MMPs and TIMPs in a context of inflammatory processes MMPs are involved in numerous inflammatory diseases including respiratory cardiovascular and central nervous system pathologies This volume presents new advances in the involvement of MMPs in various diseases associated with inflammatory processes Moreover the recent development of selective and non selective inhibitors of MMPs provides new insights in the relationship between activation of inflammatory cells and tissue remodelling and advises new therapeutic possibilities for the treatment of inflammatory diseases

*Matrix Metalloproteinase Protocols* Ian M. Clark, 2008-02-05 Research in the matrix metalloproteinase field began with the demonstration by Gross and Lapi re in 1962 that resorbing tadpole tail expressed an enzyme that could degrade collagen gels These humble beginnings have led us to the elucidation of around twenty distinct vertebrate MMPs along with a variety of homologs from such diverse organisms as sea urchin plants nematode worm and bacteria This coupled with four known specific inhibitors of MMPs the TIMPs gives a complex picture Part I of Matrix Metalloproteinase Protocols provides the reader with a selective overview of the MMP arena and a chance to come to grips with where the field has been where it is and where it is going I hope that this complements all of the methodology that comes later Part II presents the reader with a diverse set of methods for the expression and purification of MMPs and TIMPs bringing together the long and often hard earned experience of a number of researchers Part III allows the reader to detect MMPs and TIMPs at both the protein and mRNA level whereas Part IV gives the ability to assay MMP and TIMP activities in a wide variety of circumstances
