Metabolic And Endocrine Problems In The Elderly:

Metabolic and Endocrine Problems in the Elderly William J. MacLennan, Norman R. Peden, 2012-12-06 Illness in old age is characterised by vague and atypical presenting features which are often missed and wrongly attributed to the ageing process This is particularly true of endocrine disorders where hypothyroidism may masquerade as dementia where electrolyte imbalance may cause lassitude and where diabetes mellitus may produce a wide range of complications commonly associated with ageing It is our intention that our book provide straightforward practical guidance in this difficult area by delineating the effects of ageing on endocrine function and the clinical consequences of these and by describing in detail the wide range of presenting clinical features of endocrine disease in the elderly Physicians are also often baffled and misled by the effects of ageing and disease on laboratory tests used in the investigation of endocrine disease Our book describes these changes in detail and gives guidance on which tests are most appropriate Ageing and disease also produce subtle changes in the response of patients to drugs and replacement and this is also discussed in detail Subjects included separately and in depth include thyroid disease the clinical features and treatment of diabetes postmenopausal changes bone disease fluid and electrolyte imbalance energy imbalance and drugs causing endocrine and metabolic disorders These have been chosen because we consider that they present problems which are particularly relevant to the elderly Many other issues are covered in general textbooks of endocrinology and have been omitted [Metabolic and Endocrine Problems in the Elderly](#) William J MacLennan, Norman R Peden, 1989-04-10 **Aging and Endocrinology, An Issue of Endocrinology and Metabolism Clinics, E-Book** Anne R. Cappola, 2013-06-28 This issue of Endocrinology Clinics brings the reader up to date on the important advances in research surrounding the role of aging on the endocrine system Guest edited by Anne Cappola the topics covered include reproductive aging in women thyroid disorders testosterone administration osteoporosis in older adults hormonal therapeutics and more **Principles and Practice of Geriatric Surgery** Ronnie Ann Rosenthal, Michael E. Zenilman, Mark R. Katlic, 2013-06-29 More than two decades ago in response to the special healthcare needs of the aging American population interest in the field of geriatric medicine began to grow and blossom in the United States In 1984 and 1985 under the editorial leadership of Christine K Cassel and William R Hazzard respectively two major textbooks devoted to the medical care of aged patients were published These scholarly comprehensive texts provided insight into the principles of aging and guidance in the care of the geriatric patient Three editions later the need to understand the special issues involved in the medical care of the elderly is widely accepted by internists primary care providers and medical specialists For the editors of this book the special issues involved in the surgical care of the elderly have been apparent for nearly as long Although there have been a few scholarly texts on the subject including one in 1990 by Mark R Katlic general acceptance of the concept of geriatric surgery by our surgical and medical colleagues has however lagged This is not the result of a proportionately smaller number of older patients with surgical disease because cancer cardiovascular disease and orthopedic

problems are diseases of the aged It is rather the result of uncertainty about the value of surgery in the elderly and concerns about the risks of operations In the past such concerns prevented primary care givers from referring patients for surgical care and prevented surgeons from agreeing to operate

Endocrinology of Aging Emiliano Corpas, Marc R. Blackman, S. Mitchell Harman, Antonio Ruiz-Torres, 2020-09-22 *Endocrinology of Aging Clinical Aspects in Diagrams and Images* presents chapters in a way that allows the reader to incorporate concepts and complex facts in a visual way As the global population becomes older the need for a deeper understanding of geriatric pathology increases and with it there becomes a greater need to access educational resources on the endocrinology and metabolism of aging According to the United Nations the number of people aged 60 years or over in the world is projected to be 1.4 billion in 2030 and 2.1 billion in 2050 hence this is a timely resource Divided according to specific endocrine and metabolic systems providing evidence based content Addresses physiological changes that alter the pathophysiology of the clinical picture Considers the patient transitioning from young adult to elderly discussing endocrinological challenges to discern physiology from pathology Focuses on age as an essential factor for diagnostic and endocrine management
