**Metal Complexes and Metals in Macromolecules** Dieter Wöhrle, Anatolii D. Pomogailo, 2003-07-09 Metals and metal complexes can form compounds with organic macromolecules that show amazing properties As is so often the case nature leads by example Synthetically produced model compounds such as phthalocyanines porphyrines or metalloproteins as well as metallorganic polymers have aroused much interest in materials science Their special magnetic electrochemical and photochemical properties open up new perspectives in microelectronics and sensors This compact manual is aimed at all organic inorganic polymer and physical chemists as well as materials scientists looking for competent and detailed information on the current state of this interdisciplinary area of research It covers all questions relating to the targeted design of metallic macromolecules from proven synthesis methods right up to the latest strategies It also treats major progress in the determination of their structures the physical chemical properties of promising compounds and their potential in microelectronics and sensors Furthermore the most important methods of synthesis and investigation are presented in detail in an experimental section while a comprehensive collection of pertinent original literature rounds off this unique reference on all matters relating to macromolecular metal complexes *Macromolecular Metal Carboxylates and Their Nanocomposites* Anatolii D. Pomogailo, Gulzhian I. Dzhardimalieva, V. N. Kestelman, 2010-09-02 Data on the synthesis and physicochemical studies of salts of mono or dibasic unsaturated carboxylic acids and macromolecular metal carboxylates are generalised and described systematically in this monograph The structures and properties of the COO group in various compounds and characteristic features of the structures of carboxylate are analysed The main routes and kinetics of polymerisation transformations of unsaturated metal carboxylates are considered The attention is focused on the effect of the metal ion on the monomer reactivity and the polymer morphology and structure The possibility of stereochemical control of radical polymerisation of unsaturated metal carboxylates is demonstrated The electronic magnetic optical absorption and thermal properties of metal co polymers and nanocomposites and their main applications are also considered

cross linking capacity The possibility of reducing chromium content from leather tanning agents by replacing it with other tanning metals has significant environmental implications and minimum changes in terms of quality and production costs of natural leather and is a viable alternative for a safe future Applicative Chemistry of Tanning Metallic Heterocomplexes is a book dedicated to the synthesis and use of tanning metallic heterocomplexes in leather tanning as alternatives to tanning with basic chromium salts Replacing chromium with other tanning metals is an innovative approach that exploits the possibility that a series of known disadvantages of tanning metals used individually be reduced by heterocomplexation The synthesis mechanism of stable combinations of chromium with other tanning metals aluminum iron titanium or zirconium is based on the stoichiometry of oxidation reduction reactions which enables a wide range of combinations the premise for obtaining various properties by tanning and retanning natural leather The volume is intended as a useful reference for researchers chemical auxiliary producers experts in natural leather processing who are looking for clean and efficient solutions for wastewater pollutants sludge or solid wastes while striving to preserve the known characteristics of mineral tanned natural leather *Metal-Catalyzed Polymerization* Samir Chikkali,Ashootosh V. Ambade,Bas de Bruin,Michael Shaver,2017-08-03 The proposed book focusses on metal mediated catalyzed controlled living radical polymerization CRP LRP methods It surveys a wide variety of catalyzed polymerization reactions making it essentially a one stop review in the field A significant contribution to polymer science is metathesis polymerization discovered by Grubbs and others The book will cover various metathesis polymerization methods and implications in polymer industry
