

Metallurgy: Metallurgy is the process of extraction of metals in their pure form from their ores. Metallurgy includes the preparation of alloys and the mechanical and heat treatments given to the metals for imparting necessary desired properties to them. The physical and chemical methods employed for the purpose are called metallurgical processes.

Mineral: Metals occur mainly in the earth's crust, sometimes in the native or free elemental form, but usually as compounds with other elements. Naturally-occurring elements and compounds are known as minerals.

Generally, minerals are homogeneous crystalline solids; some have fairly definite composition, others exist over a range of composition. They may contain extra elements in solid solution.

Rock: Rocks are aggregates of one or more minerals and have different characteristics corresponding to their period and mode of formation.
