Metamorphosis A Problem In Developmental:

Metamorphosis Lawrence Gilbert, 2011-11-01 The old order changeth yielding place to new When Tennyson wrote this he was unfamiliar with the pace of modern science else he would have said the new is displaced by the newer When Gilbert and I gathered the papers for the first edition of this overview of metamorphosis we aimed to provide a broad basis upon which the experimental analysis of the developmental changes called metamorphosis could proceed We were both aware then that with the new techniques of biochemistry and with the revolutionary breakthrough to the nature of the gene countless new possibilities were being opened for the exploration of the molecular basis of development The resources offered by metamorphic changes offered unique opportunities to trace the path from gene to phenotype Our expectations were high I visited Larry Gilbert and Earl Frieden in their laboratories and saw with envy how far advanced they were then in the use of molecular methods of analysis I had started on a different approach to develop an in vitro test for thyroid action on amphibian tissue But circumstances limited my own progress to the initial delimitation of the technical possibilities of the in vitro system Only from the sidelines could I watch the steady if slow progress of biology in penetrating the maze of molecular events by which animal tissues respond to hormonal and other developmental factors

Current Topics in Developmental Biology, 1996-03-14 This Series provides a comprehensive survey of the major topics in the field of developmental biology The volumes are valuable to researchers in animal and plant development as well as to students and professionals who want an introduction to cellular and molecular mechanisms of development This year marks a major milestone for the Series as it completes its thirtieth year of publication making it the longest running forum for contemporary issues in developmental biology

Crustacean Issues 2 Adrian Wenner, 1985-06-01 This volume is an outcome of the annual meeting of the crustacean society symposia on Crustacean Issues 2 It examines issues in contemporary carcinology The volume emphasises on larval and postlarval growth in decapods

The Eukaryote Genome in Development and Evolution John Bernard, 2012-12-06 The mind unlearns with difficulty what has long been impressed upon it Seneca Reductionism is without question the most successful analytical approach available to the experimental scientist With the advent of techniques for cloning and sequencing DNA and the development of a variety of molecular probes for localizing macromolecules in cells and tissues the biologist now has available the most powerful reductionist tools ever invented The application of these new technologies has led to a veritable explosion of facts regarding the types and organization of nucleotide sequences present in the genomes of eukaryotes These data offer a level of precision and predictability which is unparalleled in biology Recombinant DNA techniques were initially developed to gather information about the structure and organization of the DNA sequences within a genome The power and potential of these techniques

however extend far beyond simple data collection of this kind In an attempt to use the new technology as a basis for analyzing development and evolution attention was first focused on the topic of gene regulation an approach that had proven so successful in prokaryotes It is now clear that this has not been an adequate approach Lewin 1984 has quoted Brenner as stating at the beginning it was said that the answer to the understanding of development was going to come from a knowledge of the molecular mechanisms of gene control I doubt whether anyone believes this any more

The Physiology of Developing Fish: Viviparity and Posthatching Juveniles, 1988-04-15 FROM THE PREFACE Dramatic changes occur in the physiology of most animals during their development Among the vertebrates birds are entirely oviparous live for variable periods in a cleidoic egg and show fundamental alterations in excretion nutrition and respiration at the time of hatching In contrast the eutherian mammals are all viviparous depend on the maternal circulation and a specialized placenta to provide food exchange gases and discharge wastes The physiology of both mother and fetus is highly specialized during gestation and changes fundamentally at the time of birth Fishes exemplify both the oviparous and the viviparous modes of development with some examples that are intermediate between the two In these two volumes selected reviews of many but not all aspects of development are presented The chapters in Part A relate to the physiology of eggs and larvae those in Part B concern viviparity and the physiology of posthatching juvenile fishes

Biomechanisms Regulating Growth and Development George L. Steffens, Theron S. Rumsey, 2012-12-06 The Annual Beltsville Symposium provides a forum for interaction among scientists involved in research that is vitally important to agri culture and to the agricultural sciences The Twelfth Symposium in this series focused on the unifying biochemical and physiological mechanisms controlling growth and development of biological systems animals plants insects Unraveling the complex biochemical mechanisms associated with the sequencing of organism growth and development and identifying locating and manipulating key control mechanisms are essential in utilizing the full potential of biotechnology for improving the composition and quality of agricultural products and the profitability of agriculture Accordingly speakers directed their remarks to basic aspects of biological mechanisms in their area of specialization with consideration given to current status future direction potential impact and limitations to progress The Symposium addressed fundamental questions in Tissue specific gene regulation cell division and differentiation Mechanisms for regulating hormone concentration Hormonal regulation of growth and development Non hormonal regulation of growth and development Nutritional regulation of growth and development Because the backgrounds of the symposium attendees covered a wide spectrum in the basic biological and physical sciences each topic was introduced by a brief overview but general reviews were avoided in favor of findings from on going research projects The symposium brought together a distinguished group of invited scientists from around the world who are leaders Many attendees made poster presentations which increased the exchange of ideas and stimulated informal discussion
