Metaphysical Values:

Metaphysics and Explanation W. H. Capitan, D. D. Merrill, 2010-11-23 This volume offers an unusual variety of topics presented during the fifth annual Oberlin Colloquium in Philosophy Essays topics include a dispute of the standard deductivist account of scientific testability two definitions of nonsense that are closely related and correlate to science's concern with truth and philosophy's concern with concepts contesting the causes of voluntary actions purported in Hart and Honore's Causation and the Law distinguishing two kinds of metaphysical tasks taxonomic and evaluative and discussions of what a thing is in terms of its qualities and particulars and the distinction between numerical and conceptual differences universals and individuation Secular and Spiritual Values Dudley Plunkett, 2018-10-16 Originally published in 1990 educational debate in the western world was dominated by pragmatic utilitarian values The prevailing assumption was that education should be geared towards fitting people into the world of work Dudley Plunkett broke new ground in this debate by seeking to reconcile secular and spiritual values in educational policy and practice *Secular and Spiritual Values* presents a critique of the influence of enterprise culture on education It argues that the resurgence of interest in the spiritual today represents a return to an essential aspect of human nature and maintains that the spiritual perspective can provide a context for the regeneration of values in education It indicates a way forward which while not denying pragmatism rationalism or holistic values calls for openness to a spiritual reality that is seen as primary It also assesses the practical implications and priorities for action if education is to contribute to the exploration of the spiritual as well as the intellectual and emotional dimensions of human experience This book has grown out of the author's twenty five years experience in educational studies and from his particular preoccupation with values in education It should still be of interest to those concerned with the nature and purpose of education teachers parents educational policy makers and administrators and academics in the field Nietzsche's Metaphysics of the Will to Power Tsarina Doyle, 2018-02-15 Nietzsche's controversial will to power thesis is convincingly rehabilitated in this compelling book Tsarina Doyle presents a fresh interpretation of his account of nature and value which sees him defy the dominant conception of nature in the Enlightenment and overturn Hume's distinction between facts and values Doyle argues that Nietzsche challenges Hume indirectly through critical engagement with Kant's idealism and that in so doing and despite some wrong turns he establishes the possibility of objective value in response to nihilism and the causal efficacy of consciousness as a necessary condition of human autonomy Her book will be important for scholars of Nietzsche's metaphysics and of the history of philosophy and science more generally **Reality and Value** Arthur Campbell Garnett, 2019-03-06 Originally published in 1937 This book addresses the importance of the theory of values that rests on a general metaphysical understanding founded on a comprehensive view of all aspects of the world The author speaks against the absolutist theories with a realistic one encompassing a theory of space and time and considering value as an object of immediate intuition These great philosophical questions feed into discussions of the philosophy of religion and of science

Garnett distinguishes between spiritual and other values on the ground that the spiritual values are not subjective to satiety while other values are. He contends that our knowledge of mind is as direct and reliable as our knowledge of the physical world. This is an important early book by an influential 20th Century thinker. **Spiritual Capital** Samuel D.

Rima, 2016-04-01 Presenting a thorough comprehensive theory of spiritual capital based on solid academic research. Spiritual Capital serves to reinforce and amplify the notion of a moral economic core that is beginning to feature in contemporary economic arguments. In this rare major work wholly dedicated to the subject of spiritual capital, Sam Rima explains the desperate need for revolutionary and transformational thinking in the area of economic policy and practice and makes the case for a new moral foundation to business and economics that directly addresses today's financial and business crisis. Writing in an accessible style and drawing on examples from several continents, Rima explains spiritual capital theory in terms of the resources needed for its creation, how it is formed, how it can be invested, and what the return on investment can be. The book provides practical tools for measuring a personal or organizational store of spiritual capital along with clear guidelines on how to engage in spiritual capital formation. These will benefit business leaders interested in developing viable and sustainable enterprises capable of avoiding the disconnection between economic policy and social reality. There are also recommendations here for policy makers regarding the macro application of spiritual capital theory. This important contribution to Gower's Transformation and Innovation Series will appeal to business leaders and policy makers, academicians and students in the fields of sociology, theology, and economics, and anyone interested in social and economic justice issues, social innovation, and corporate social responsibility. **Metaphysics Without Truth** Stefan Lorenz

Sorgner, 1999 *The Metaphysics of Race* Amit Varshizky, 2024-11-04 This book seeks to reframe debates on the conflicting scientific and spiritual traditions that underpinned the Nazi worldview, showing how, despite the multitude of tensions and rivals among its adherents, it provided a coherent conceptual grid and possessed its own philosophical consistency. Drawing on a large variety of works, the volume offers insights into the intellectual climate that allowed the radical ideology of National Socialism to take hold. It examines the emergence of nuanced conceptions of race in interwar Germany and the pursuit of a new ethical and existential fulcrum in biology. Accordingly, the volume calls for a re-examination of the place of genetics in Nazi racial thought, drawing attention to the multi-register voices within the framework of interwar racial theory. Varshizky explores the ways in which these ideas provided new justifications for the Nazi revolutionary enterprise and blurred the distinction between fact and value, knowledge and faith, the secular and the sacred, and how they allowed Nazi thinkers to bounce across these epistemological divisions. This volume will be of interest to scholars of Nazi Germany and World War II intellectual and cultural history, the history of science, and the philosophy of religion.
