Library and Information Services Division, 1977 [Book catalog of the Library and Information Services Division](#) Environmental Science Information Center. Library and Information Services Division, 1977 **Studies in the Methodology and Foundations of Science** Patrick Suppes, 2013-03-09 The twenty three papers collected in this volume represent an important part of my published work up to the date of this volume I have not arranged the paper chronologically but under four main headings Part I contains five papers on methodology concerned with models and measurement in the sciences This part also contains the first paper I published A Set of Independent Axioms for Extensive Quantities in Portugaliae Mathematica in 1951 Part II also is concerned with methodology and includes six papers on probability and utility It is not always easy to separate papers on probability and utility from papers on measurement because of the close connection between the two subjects but Articles 6 and 8 even though they have close relations to measurement seem more properly to belong in Part II because they are concerned with substantive questions about probability and utility The last two parts are concerned with the foundations of physics and the foundations of psychology I have used the term foundations rather than philosophy because the papers are mainly concerned with specific axiomatic formulations for particular parts of physics or of psychology and it seems to me that the term foundations more appropriately describes such constructive axiomatic ventures Part III contains four papers on the foundations of physics The first paper deals with foundations of special relativity and the last three with the role of probability in quantum mechanics *The Uses of Experiment* David Gooding, Trevor Pinch, Simon Schaffer, 1989-05-18 Renowned scholars in history sociology philosophy and anthropology consider seventeenth and twentieth century weapon testing particle physics biology and other topics in an account of important and often famous experiments **Nietzsche's Anthropic Circle** George J. Stack, 2005 Nietzsche's Anthropic Circle is an internal analysis and interpretation of Nietzsche's critical uncovering of anthropomorphic truth in language and science as well as his later use of anthropic analogies and transferences in his imaginative perspectival interpretation a hybrid of art and science of a universal immanent will to power in nature Both the relationship of Nietzsche to Kant's analysis of knowledge in the Critique of Pure Reason and his absorption of a dynamic theory of nature are explored in some detail A crucial distinction between Nietzsche's perspectival concept of knowledge and perspectival interpretation is thoroughly discussed against the background of recurring analyses of his critique of knowledge and truth It is shown that instrumental fictionalism was adopted by Nietzsche in order to put in question the pure objectivism of science This links an aspect of his thought to the domain of recent American philosophy of science The anticipatory relationship between Nietzsche's proto structuralist analysis of language and recent linguistic structuralism as well as his affiliation with

evolutionary epistemology is explored In the concluding portion of this inquiry it is contended that Nietzsche's psychology of a will to power in human drives thought and behavior is at least theoretically defensible However it must be segregated from the extension of a will to power to the cosmos There is a strong concluding argument offered that seeks to demonstrate that the so called metaphysics of the will to power is an artfully constructed exoteric fable designed to retrieve a sense of the humanization of the world in face of a de anthropomorphic world picture George Stack is Professor Emeritus of Philosophy at the State University College of New York at Brockport and the author of several books dealing with the philosophy of Friedrich Nietzsche Book Catalog of the Library and Information Services Division: Author-title-series indexes

Diderik Batens, Jean-Paul van Bendegem, 2012-12-06 This is not another collection of contributions on a traditional subject Even more than we dared to expect during the preparatory stages the papers in this volume prove that our thinking about science has taken a new turn and has reached a new stage The progressive destruction of the received view has been a fascinating and healthy experience At present the period of destruction is over A richer and more equilibrated analysis of a number of problems is possible and is being cru ried out In this sense this book comes right on time We owe a lot to the scholars of the Kuhnian period They not only did away with obstacles but in several respects instigated a shift in attention that changed history and philosophy of science in an irreversible way A clearcut example we borrow it from the paper by Risto Hilpinen concerns the study of science as a process Rnd not only as a result Moreover they apparently reached several lasting results e g concerning the tremendous impact of theoretical conceptions on empirical data Apart from baffling people for several decades this insight rules out an other return to simple minded empiricism in the future Revisiting the Foundations of Relativistic Physics Ashtekar, 2011-06-28 This book is for physicists historians and philosophers of physics as well as students seeking an introduction to ongoing debates in relativistic and quantum physics This title is unique in that it comprises contributions by leading physicists philosophers and historians of science it covers the recent debates on the emergence of relativity and quantum theory it includes chapters with an introductory character comprehensible to students and science teachers it can be used in graduate level courses in the history and philosophy of science it strengthens the bonds between the communities of scientists historians and philosophers
