Regeneration In The Central Nervous Syst:

Axonal Regeneration in the Central Nervous System Nicholas A Ingoglia, Marion Murray, 2000-09-29 Summarizing a review of research into factors that regulate stimulate and prevent regeneration in the central nervous system CNS this comprehensive reference progresses further into answering and resolving neuron capacity for axon regeneration in the mammalian CNS Axonal Regeneration in the Central Nervous System analyzes axonal regeneration reinnervation and functional recovery in lower vertebrates examines the correlation between developmental age and the ability to regenerate considers mammalian neuron responses at the cell body site of injury and in the distal nerve including apoptic cell death and inflammatory and glial responses to injury reviews genomic responses to axotomy with a comparative description of transcribed genes from successfully regenerating neurons and neurons incapable of regrowth discusses how growing axons may induce the expression of genes in glia Schwann cells following axotomy and regeneration describes the use of gene therapy to deliver trophic and survival factors to injured neurons explores the hospitable environments of the peripheral nerve olfactory ensheathing cells and fetal cell transplants for regeneration discusses results from applications of fetal CNS tissue to human spinal cord injuries and much more

Regeneration in the Central Nervous System William Frederick Windle, 1955

Mechanisms of Axonal Regeneration in the Central Nervous System Gunnar Heiko Dirk Poplawski, 2014 The regenerative capacity of central nervous system CNS axons after injury is severely impaired compared to axons of the peripheral nervous system PNS We hypothesized that mechanisms both intrinsic and extrinsic to the neuron influence the ability of CNS axons to regenerate To investigate this hypothesis we explored two model systems In the first model system we identified a regeneration transcriptome in injured corticospinal motor neurons that is associated with enhanced central axon regeneration after spinal cord injury The genetic mechanisms identified in this model include cAMP Erk CREB Huntingtin NFE2L2 ephrin and semaphorin signaling and provide a dataset for potential therapeutic intervention to improve axonal regeneration in vivo after spinal cord injury In the second model we tested the hypothesis that glial cells of the peripheral nerve Schwann cells are an essential mechanism contributing to central axonal regeneration after conditioning lesions wherein injury to the peripheral branch of a dorsal root ganglion sensory neuron enhances regeneration of the central branch of the sensory neuron The gene encoding Low density lipoprotein Receptor related Protein 1 LRP1 was conditionally deleted in Schwann cells impairing the survival and function of Schwann cells after injury animals with Schwann cell specific deletion of LRP1 exhibited a significant reduction in axon regeneration in vitro and a trend towards central sensory axon regeneration after conditioning lesions confirming that glial cells exhibit an essential but partial role in supporting axonal regeneration Overall these studies identify novel molecular and cellular mechanisms that influence central axon regeneration and suggest therapeutic approaches to improve neural repair after CNS injury

Axonal Regeneration in the Mammalian Central Nervous System Dorothy E. Oorschot, David G. Jones, 2012-12-06 This state of the art review links the experimental data into a cohesive and critical account of CNS regeneration Research findings are discussed in terms of their relevance to one or more of thirteen hypotheses concerned with regeneration in the mammalian CNS Research findings reviewed include regeneration in developing mammals and in submammalian vertebrates the use of transplants and or pharmacological treatments in vitro studies on neurotrophic and neurite promoting factors and their potential relevance to CNS regeneration in vivo and in vitro studies on the types of glial cells that may be responsible for enhancing or suppressing axonal re growth

Microglia in the Regenerating and Degenerating Central Nervous System Wolfgang J. Streit, 2013-03-14 Over the past

decade the study of microglial cells has gained increasing importance in particular for those working in the fields of degeneration and regeneration Microglia in the Regenerating and Degenerating CNS supports the assertion that understanding microglial biology could perhaps be pivotal for unraveling the pathogenetic mechanisms that underlie Alzheimer s disease currently the most widely studied disorder of the central nervous system In addition microglia are also critical for understanding the sequelae of traumatic brain and spinal cord injury and for the vitally important post traumatic repair processes This book gives an up to date account of the role of microglia in degeneration and regeneration of the nervous system and also reviews microglial cell function and physiology Cellular neurobiologists will find that this is a valuable guide to the importance and role of microglia in the CNS The ^ACentral Nervous System Per Brodal,2010-03-29
