John Bintliff, 2008-04-15 *A Companion to Archaeology* features essays from 27 of the world's leading authorities on different types of archaeology that aim to define the field and describe what it means to be an archaeologist. Shows that contemporary archaeology is an astonishingly broad activity with many contrasting specializations and ways of approaching the material record of past societies. Includes essays by experts in reading the past through art, linguistics, or the built environment and by professionals who present the past through heritage management and museums. Introduces the reader to a range of archaeologists: those who devote themselves to the philosophy of archaeology, those who see archaeology as politics or anthropology, and those who contend that the essence of the discipline is a hard science. A *Bibliography of British History, 1914-1989* Keith Robbins, American Historical Association, Royal Historical Society (Great Britain), 1996. Containing over 25,000 entries, this unique volume will be absolutely indispensable for all those with an interest in Britain in the twentieth century. Accessibly arranged by theme with helpful introductions to each chapter, a huge range of topics is covered. There is a comprehensive index. **Planning Canadian Regions** Gerald Hodge, Ira M. Robinson, 2007-10-01. *Planning Canadian Regions* is the first book to consolidate the history, evolution, current practice, and future prospects for regional planning in Canada. As planners grapple with challenges wrought by globalization, the evolution of massive new city regions, and the pressures of sustainable and community development, a deeper understanding of Canada's approaches is invaluable. Hodge and Robinson identify the conceptual and historical foundations of regional planning and propose a new planning paradigm that emphasizes regional governance and greater inclusiveness and integration of physical planning with planning for economic sustainability and natural ecosystems. *Advances in Ecological Research*, 1974-11-29. *Advances in Ecological Research* *Geographical Thought* Lalita Rana, 2014-01-01. *Geographical thought* at any point in time is a manifestation of the prevailing viewpoints and methodological approaches in vogue. The development of geography has a history of evolution of over 2000 years. The discipline has been crafted over time to incorporate ideas from various schools of thought and several other disciplines from ancient to modern times. The existing methodology and the subject matter of Geography is a reflection of this assemblage and evolution. The nature of development remained more philosophical up to the modern period. The First edition of this book published in 2008 was an attempt towards compilation of relevant study material on evolution of Geographic thought in a systematic way up to the modern period. The book has been revised with the addition of two elaborated sections, i.e. one each on the Classical and the Contemporary tradition in geography. However, the major thrust of present book is on the nature of geographic developments in its contemporary phase. More recently, the anthropocentrism and a concern about methodology are more evident in the development of discipline. Regions J. Nicholas Entrikin, 2017-05-15. This volume gathers a collection of the most seminal essays written by leading experts in the field which identify or signal many of the changing directions of regional research in geography during the past fifty years.

Various forms of new regionalism or new regional geography have emerged over the last several decades especially in political and economic geography but in general the region has been a concept in declining use. Despite this the region has gained new currency in sub areas of political and economic geography and a so called new regionalism has emerged in studies of the changing nature of the nation state in a globalizing economy. Taken together the essays in this volume provide the reader with a comprehensive overview of academic developments in this area of geographical research.

Ecopolis Paul F. Downton, 2008-11-19

From 2008 for the first time in human history half of the world's population now live in cities. Yet despite a wealth of literature on green architecture and planning there is to date no single book which draws together theory from the full range of disciplines from architecture planning and ecology which we must come to grips with if we are to design future cities which are genuinely sustainable. Paul Downton's *Ecopolis* takes a major step along this path. It highlights the urgent need to understand the role of cities as both agents of change and means of survival at a time when climate change has finally grabbed world attention and it provides a framework for designing cities that integrates knowledge both academic and practical from a range of relevant disciplines. Identifying key theorists practitioners places and philosophies the book provides a solid theoretical context which introduces the concept of urban fractals and goes on to present a series of design and planning tools for achieving Sustainable Human Ecological Development. SHED Combining knowledge from diverse fields to present a synthesis of urban ecology the book will provide a valuable resource for students researchers and practitioners in architecture construction planning geography and the traditional life sciences.
