Mathematical Models for Planning and Controlling Air Quality Giorgio Fronza, Piero Melli, 2014-05-17 Mathematical Models for Planning and Controlling Air Quality documents the proceedings of an IIASA Workshop on Mathematical Models for Planning and Controlling Air Quality October 1979 The Workshop had two goals The first was to contribute to bridging the gap between air quality modeling and management The second was to consider an unusual air quality control strategy namely real time emission control The book is organized into two parts corresponding roughly to the two goals outlined above Part One examines the role of mathematical models in air quality planning and includes a presentation of a decision maker's viewpoint illustrations of various types of models descriptive and or decision models available to decision makers assessments of the role of models in actual decision making and two papers on the more traditional question of the significance and range of application of descriptive models i e of models that represent the physics of the air pollution phenomenon Part Two is

devoted primarily to real time control It includes a presentation of the IIASA case study of the Venetian lagoon and papers on various aspects of this research on alternative concentration predictors and descriptions of implementations of real time forecast and control schemes in Japan and Italy

Air Quality Management and Research in Southeast Asia Erik Velasco, Armando Retama, Dimitris Stratoulis, 2024-12-01 This book examines the capabilities for monitoring air quality developing emission inventories and running chemical transport models for regulatory forecasting and research purposes in Southeast Asia It also reviews scientific efforts made to better understand and characterize air pollution in the region Poor air quality poses a threat to public health It affects people s lives and undermines economic growth but as in many other parts of the world it has been overlooked in Southeast Asia International assessments suggest that it is the culprit of 335 thousand premature deaths in the region each year entailing a monetary cost equivalent to 6 75% of the regional GDP Reducing air pollution requires concerted efforts from all Southeast Asian nations to implement local and regional air quality policies following a science policy approach For such endeavor it is essential to develop tools that enable timely and reliable air quality management This entails collecting data to characterize the magnitude origin and impact of air pollution to support corrective actions The objective of this book is to provide a starting point for a science based conversation about implementing solutions to Southeast Asia s air pollution problem by bringing together an analysis of the availability of air quality data and studies from across the region
