Regular Figures International Series Of Monographs On Pure Applied Mathematics Vol 48:

International Series of Monographs in Pure and Applied Mathematics ,1969 **Regular Figures** L. Fejes

Tóth,2014-07-10 Regular Figures concerns the systematology and genetics of regular figures The first part of the book deals with the classical theory of the regular figures This topic includes description of plane ornaments spherical arrangements hyperbolic tessellations polyhedral and regular polytopes The problem of geometry of the sphere and the two dimensional hyperbolic space are considered Classical theory is explained as describing all possible symmetrical groupings in different spaces of constant curvature The second part deals with the genetics of the regular figures and the inequalities found in polygons also presented as examples are the packing and covering problems of a given circle using the most or least number of discs The problem of distributing n points on the sphere for these points to be placed as far as possible from each other is also discussed The theories and problems discussed are then applied to pollen grains which are transported by animals or the wind A closer look into the exterior composition of the grain shows many characteristics of uniform distribution of orifices as well as irregular distribution A formula that calculates such packing density is then explained More advanced problems such as the genetics of the protean regular figures of higher spaces are also discussed The book is ideal for physicists

mathematicians architects and students and professors in geometry **Geometric Measure Theory** Frank

Morgan,2008-09-09 Geometric Measure Theory Fourth Edition is an excellent text for introducing ideas from geometric measure theory and the calculus of variations to beginning graduate students and researchers This updated edition contains abundant illustrations examples exercises and solutions and the latest results on soap bubble clusters including a new chapter on Double Bubbles in Spheres Gauss Space and Tori It also includes a new chapter on Manifolds with Density and Perelman s Proof of the Poincar Conjecture This text is essential to any student who wants to learn geometric measure theory and will appeal to researchers and mathematicians working in the field Morgan emphasizes geometry over proofs and technicalities providing a fast and efficient insight into many aspects of the subject New to the 4th edition Abundant illustrations examples exercises and solutions The latest results on soap bubble clusters including a new chapter on Double Bubbles in Spheres Gauss Space and Tori A new chapter on Manifolds with Density and Perelman s Proof of the Poincar Conjecture Contributions by undergraduates **A Collection of Problems on a Course of Mathematical Analysis** G. N.

Berman,2016-06-06 A Collection of Problems on a Course of Mathematical Analysis is a collection of systematically selected problems and exercises with corresponding solutions in mathematical analysis A common instruction precedes a group of problems of the same type Problems with a physics content are preceded by the necessary physical laws In the case of more or less difficult problems hints are given in the answers This book is comprised of 15 chapters and begins with an overview of functions and methods of specifying them notation for and classification of functions elementary investigation of functions and trigonometric and inverse trigonometric functions The following chapters deal with limits and tests for their existence

differential calculus with emphasis on derivatives and differentials functions and curves definite and indefinite integrals and methods of evaluating definite integrals Some applications of the integral in geometry statics and physics are also considered along with functions of several variables multiple integrals and iterated integration line and surface integrals and differential equations The final chapter is devoted to trigonometric series This monograph is intended for students studying

mathematical analysis within the framework of a technical college course **Using the Mathematics Literature** Kristine K. Fowler, 2004-05-25 This reference serves as a reader friendly guide to every basic tool and skill required in the mathematical library and helps mathematicians find resources in any format in the mathematics literature It lists a wide range of standard texts journals review articles newsgroups and Internet and database tools for every major subfield in mathematics and details methods of access to primary literature sources of new research applications results and techniques Using the Mathematics Literature is the most comprehensive and up to date resource on mathematics literature in both print and electronic formats presenting time saving strategies for retrieval of the latest information Mathematical Foundations

of Thermodynamics R. Giles, 2016-01-22 Mathematical Foundations of Thermodynamics details the core concepts of the mathematical principles employed in thermodynamics The book discusses the topics in a way that physical meanings are assigned to the theoretical terms The coverage of the text includes the mechanical systems and adiabatic processes topological considerations and equilibrium states and potentials The book also covers Galilean thermodynamics symmetry in thermodynamics and special relativistic thermodynamics The book will be of great interest to practitioners and researchers of disciplines that deal with thermodynamics such as physics engineering and chemistry **A Collection of Problems on Mathematical Physics** B. M. Budak, A. A. Samarskii, A. N. Tikhonov, 2013-10-22 A Collection of Problems on Mathematical Physics is a translation from the Russian and deals with problems and equations of mathematical physics The book contains problems and solutions The book discusses problems on the derivation of equations and boundary condition These Problems are arranged on the type and reduction to canonical form of equations in two or more independent variables The equations of hyperbolic type concerns derive from problems on vibrations of continuous media and on electromagnetic oscillations The book considers the statement and solutions of boundary value problems pertaining to equations of parabolic types when the physical processes are described by functions of two three or four independent variables such as spatial coordinates or time The book then discusses dynamic problems pertaining to the mechanics of continuous media and problems on electrodynamics The text also discusses hyperbolic and elliptic types of equations The book is intended for students in advanced mathematics and physics as well as for engineers and workers in research institutions **Non-Linear Differential Equations** G. Sansone, R. Conti, 2016-06-06 International Series of Monographs in Pure and Applied Mathematics Volume 67 Non Linear Differential Equations Revised Edition focuses on the analysis of the phase portrait of two dimensional autonomous systems qualitative methods used in finding periodic solutions in periodic systems and study of

asymptotic properties The book first discusses general theorems about solutions of differential systems Periodic solutions autonomous systems and integral curves are explained The text explains the singularities of Briot Bouquet theory The selection takes a look at plane autonomous systems Topics include limiting sets plane cycles isolated singular points index and the torus as phase space The text also examines autonomous plane systems with perturbations and autonomous and non autonomous systems with one degree of freedom The book also tackles linear systems Reducible systems periodic solutions and linear periodic systems are considered The book is a vital source of information for readers interested in applied mathematics □□□□□□□□,1971 **A Course of Higher Mathematics** V. I. Smirnov,2014-07-10 International Series of Monographs in Pure and Applied Mathematics Volume 62 A Course of Higher Mathematics V Integration and Functional Analysis focuses on the theory of functions The book first discusses the Stieltjes integral Concerns include sets and their powers Darboux sums improper Stieltjes integral jump functions Helly's theorem and selection principles The text then takes a look at set functions and the Lebesgue integral Operations on sets measurable sets properties of closed and open sets criteria for measurability and exterior measure and its properties are discussed The text also examines set functions absolute continuity and generalization of the integral Absolutely continuous set functions absolutely continuous functions of several variables supplementary propositions and the properties of the Hellinger integral are presented The text also focuses on metric and normed spaces Separability compactness linear functionals conjugate spaces and operators in normed spaces are underscored The book also discusses Hilbert space Linear functionals projections axioms of the space sequences of operators and weak convergence are described The text is a valuable source of information for students and mathematicians interested in studying the theory of functions *Nieuw Archief Voor Wiskunde* ,1965 **The British National Bibliography Cumulated Subject Catalogue** ,1960 **The British National Bibliography** Arthur James Wells,1965 **The Publishers' Trade List Annual** ,1978 **Studia Scientiarum Mathematicarum Hungarica** ,1987 The Fibonacci Quarterly ,1971 *American Scientist* ,1942 Simon Stevin ,1963 **Subject Index of Modern Books Acquired** British Library,1965 **Mosaics** Donald W.
