Wood, Ian Fussey, 2018-10-03 Originally published in 1990 this book constitutes an objective evaluation of different cognitive rehabilitation techniques in relation to different types of brain injury at different stages of recovery Various forms of cognitive rehabilitation are reviewed and clinical techniques are evaluated on the basis of their ability to restore functional independence or produce behaviour change and improve aspects of cognitive ability

Neurobehavioural Disability and Social Handicap Following Traumatic Brain Injury Tom M. McMillan, Rodger Ll. Wood, 2013-11-12 Persisting neurobehavioural disability follows many forms of serious brain injury and acts as a major constraint on social independence. Rehabilitation services are often not organised in a way which addresses the needs of people with such disability and relatively few professionals have experience in the clinical management of complex disability patterns which comprise the neurobehavioural syndrome. This book is a compilation of chapters written by a group of clinicians with experience of post acute brain injury rehabilitation to ameliorate the social handicap experienced by a growing number of people who survive serious brain injury. The aim of the book is to describe the nature of neurobehavioural disability, how it translates into social handicap and what can be done to address the problems generated by such handicap through social and behavioural rehabilitation, vocational training and family education. Consideration is also given to evaluating post acute rehabilitation methods and selecting the most appropriate form of rehabilitation both in terms of clinical and cost effectiveness. The book is aimed at clinical psychologists, psychiatrists and neurologists working in brain injury rehabilitation, plus all the rehabilitation disciplines and social workers. The book will also be of interest to relatives of brain injured people who are seeking a better knowledge base in order to understand neurobehavioural disability. Additionally, the book should be helpful to the growing number of therapy care assistants, case managers and support workers responsible for the day to day care of brain injured people in the community. Neurobehavioural Sequelae of Traumatic Brain Injury Rodger Ll Wood, 1990 **Biopsychosocial Approaches in Neurorehabilitation** Huw Williams, Jonathan Evans, 2005-11-17 There has been significant progress in the field of neurorehabilitation over the past twenty years, particularly in the assessment and management of cognitive impairment. More recently, the stakeholders in neurorehabilitation—clinicians, researchers, purchasers of services and clients—have become aware of the need to develop systems and services for managing the wide ranging psycho-social sequelae of acquired brain injury (ABI). Mood, behavioural and neuropsychiatric conditions have been found to be highly prevalent. Such disorders at clinical or sub-clinical levels are disturbing for clients themselves and for their families and present a challenge for enabling survivors to regain social roles. Many individuals also experience difficulties in related areas such as pain management, drug and alcohol misuse and in maintaining relationships. Given the wide ranging psychological, psychiatric health and social sequelae of ABI, rehabilitation services are often responding to people whose needs are complex and for which the evidence base for practice may be limited. In this Special Issue of *Neuropsychological Rehabilitation*, leading international experts provide reviews of current thinking on mood, behaviour and neuropsychiatric conditions, along with issues of drug and alcohol use, pain, sexuality and relationships after brain injury. Assessment and management issues are addressed along with implications for service delivery in developed and in developing world contexts. This Special Issue will be invaluable to a wide range of neurorehabilitation professionals, including clinical psychologists, neuropsychologists, speech and language therapists.

occupational therapists neurologists neuropsychiatrists clinical nurse specialists physiotherapists and case managers The volume will also be of benefit to those planning or purchasing brain injury rehabilitation services

**Family Support Programs and Rehabilitation** Louise Margaret Smith, Hamish P. D. Godfrey, 2013-06-29 The permanent effects of traumatic brain injury TBI are not limited to the person who suffers the injury People who care for the individual particularly family members suffer in various ways Family members are often confused as to the behavioral and neuropsychological changes that they see in a brain injured relative They can become frustrated and angry when the individual does not return to premorbid levels of functioning They can become tired and worn down from repeated problems in trying to manage the individual's difficulties while having only fragmented information regarding them Drs Smith and Godfrey have provided a useful service for family members by summarizing important neuropsychological changes associated with TBI and providing practical guidelines for coping with these problems While the neuropsychological problems they describe are not completely understood the authors provide a useful description of many of the neuro behavioral problems seen following TBI in young adults They attempt to provide guidelines for family members that have practical utility in understanding and managing these patients There is a cognitive behavioral approach that can have utility for this group of individuals I applaud their efforts to provide something systematic and practical for family members

**Occupational Therapy Approaches to Traumatic Brain Injury** Laura H Krefting, Jerry A Johnson, 2013-01-11 This sensitive book provides a much needed compilation and description of OT programs for the care of individuals disabled by traumatic brain injury TBI Focusing on the disabled individual the family and the societal responses to the injured this comprehensive book covers the spectrum of available services from intensive care to transitional and community living Both theoretical approaches to the problems of brain injury as well as practical treatment techniques are explored in Occupational Therapy Approaches to Traumatic Brain Injury The processes of assessment and intervention are vital to the recovery of brain injured patients and this thorough book devotes two chapters specifically to assessment and several chapters on intervention and family involvement This useful volume contains information about rehabilitation from coma to community as well as numerous other approaches The findings and treatment suggestions presented here are applicable to many helping professionals working with TBI patients Health care practitioners working with brain injured persons and their families in both institutional and community contexts physical therapists physicians nurses and psychologists and social workers involved with assessment will find this an invaluable addition to their professional references

**Neuropsychological Rehabilitation** Jamuna Rajeswaran, 2012-09-01 Traumatic Brain Injury TBI can occur through road traffic incidents falls or violence and is therefore an extremely prevalent type of injury constituting a significant burden on health care around the world As more people are able to recover physically from TBI it is important to consider how to help repair the cognitive functions of the brain The cognitive functions could be greatly maximized by appropriate Neuropsychological rehabilitation which occurs within months of the damage This book

discusses both the theoretical and practical applications of Neuropsychological rehabilitation techniques offering a comprehensive overview of the process Using several case studies from India gained over years of clinical practice research and academic teaching this book offers an excellent guide to the procedures and tasks needed to respond effectively to patients with TBI Although focused on the Indian context this book will appeal to students and practitioners around the world as a useful resource on Neuropsychological rehabilitation techniques in India Innovative approach to Neuropsychological Rehabilitation using case vignettes Theoretical and Clinical subject matter     **A Practical Guide to Head Injury Rehabilitation** Michael D. Wesolowski, Arnie H. Zencius, 2013-06-29 Behavioral neuropsychology presents at once a challenge and an opportunity for the field of behavior analysis A great diversity of problem areas including education classroom management child rearing retardation and industry have been treated effectively by the behavior analytic approach which has traditionally and quite deliberately chosen to deemphasize physiology and cognitive variables Yet brain injury by its nature entails neurological insult that is often closely related to specific cognitive dysfunctions The challenge for behavior analysis is to develop effective treatments for a disorder with such clearly defined tripartite characteristics The opportunity exists for behavior analysis to expand its conceptual basis as well as to provide benefits to patients otherwise despairing of assistance Case histories demonstrate over 20 years of successful applications of behavior analysis to brain injured individuals indicating that some applications are possible but are these reports notable exceptions or the harbingers of a new general therapeutic approach The present book describes an overall focused behavioral program for dealing with the diversity of brain injury problems in a general brain injury rehabilitation setting The authors describe what types of neurological damage are associated with specific types of cognitive emotional dysfunction and in turn with specific types of behavioral dysfunction thereby demonstrating how the choice of behavioral treatment is guided by the neurological and subjective assessment The result is a conceptually unified approach The distinctive value of this book lies in the detail as well as the programmatic guidelines for actual implementation of this behavioral approach     **Handbook of Head Trauma** Charles J. Long, Leslie K. Ross, 2013-06-29 Providing a thorough collection of information regarding clinical aspects of head injury from acute care to recovery this treatise interrelates a variety of neural specialties and broadens the rehabilitation process to include the family     **Psychological Approaches to Rehabilitation after Traumatic Brain Injury** Andy Tyerman, Nigel S. King, 2009-01-26 The psychological effects of traumatic brain injury TBI provide a major challenge to rehabilitation services This text will increase understanding of the nature of these effects and provide practical guidance from experienced practitioners about psychological interventions for use in both rehabilitation and long term adjustment Provides practical guidance and illustrative case examples from experienced practitioners Structured around five main areas overview of psychological effects and services cognitive rehabilitation managing emotional and behavioural problems vocational rehabilitation and family impact and interventions     Psychology Library Editions: Neuropsychology

**Minor Traumatic Brain Injury Handbook** Gary W. Jay,2000-06-21 Almost two million individuals experience minor traumatic brain injury MTBI MATBI each year Patients from all over the country have similar even identical complaints from comparable types of trauma Unfortunately the vast majority of medical professionals do not recognize or understand the appearance etiology or problems associated with M **Acute Head Injury** Ruth Garner,2013-12-20 It is both a pleasure and a privilege to be invited to contribute a foreword to this book which deserves and needs to be read by virtually everyone who is concerned with the treatment and subsequent welfare of the victims of severe injuries of the brain Some friends relatives and workmates might be helped by reading some parts of it but if the book has the effect it deserves to have on therapists nurses doctors and others working in both hospitals and the community these laymen will be suitably informed and assisted by one or more members of the necessarily large therapeutic team The improvements in methods of resuscitation that have taken place during the last 40 years or so have abolished the previously fatalistic readiness to accept that a week or two in coma after a head injury was virtually a sentence to death from pneumonia After it had become possible to save lives it gradually became clear that survival of the patient was not necessarily followed by recovery of the brain and that the price of success in saving lives was a population of cerebral cripples that was increasing at the rate of 1000 or more a year throughout the country Although this figure has remained about the same for more than 20 years there has been a great improvement in the amount of interest the standard of care and the quality of results that are being achieved
