Microcomputer Applications in Statistical Hydrology Richard H. McCuen,1993 **Microcomputer Applications in Statistical Hydrology** Richard H. McCuen,1993 This applications oriented guide provides all the statistical tools needed to solve a range of real world hydrologic modelling problems Offering sample computer programs their output and interpretations it covers commonly used methods as well as more involved methods **Hydrology of Disasters** V.P. Singh,2012-12-06 The General Assembly of the United Nations passed a resolution on December 11 1987 designating the 1990s as the International Decade for Natural Disaster Reduction This resolution has served as a catalyst in promotion of international cooperation in the field of natural disaster reduction in initiation of wide ranging research activities on natural and man made disasters in development of technologies for assessment prediction prevention and mitigation through technical assistance technology transfer demonstration projects and education and training and in dissemination of information related to measures for assessment prediction prevention and mitigation of natural disasters Disasters are manifestations of environmental extremes Depending upon the type of disasters their occurrence may have short term and/or long term detrimental environmental consequences Disasters cannot be prevented altogether but their impact can be mitigated This book is an attempt to provide a discussion of hydrological aspects of the various types of natural disasters It is hoped that others will be stimulated to write more comprehensive texts on this subject of enormous importance Flood Frequency Analysis Khaled Hamed,A. Ramachandro. Rao,2019-04-30 After five decades the field of Statistical Hydrology continues to evolve and remains a very active area of investigation Researchers continue to examine various distributions methods of estimation of parameters and problems related to regionalization However much of this research appears in journals and reports and usually in a form not easily accessible to practitioners and students Flood Frequency Analysis answers this need by presenting the most popular and promising distributions and estimation procedures in a unified format It offers the details that provide the basis for the computations and illustrates each procedure with real data

Environment Harold F. Hemond, Elizabeth J. Fechner, 2014-06-13 The third edition of *Chemical Fate and Transport in the Environment* winner of a 2015 Textbook Excellence Award Texty from The Text and Academic Authors Association explains the fundamental principles of mass transport chemical partitioning and chemical biological transformations in surface waters in soil and groundwater and in air Each of these three major environmental media is introduced by descriptive overviews followed by a presentation of the controlling physical chemical and biological processes The text emphasizes intuitively based mathematical models for chemical transport and transformations in the environment and serves both as a textbook for senior undergraduate and graduate courses in environmental science and engineering and as a standard reference for environmental practitioners Winner of a 2015 Texty Award from the Text and Academic Authors Association Includes many worked examples as well as extensive exercises at the end of each chapter Illustrates the interconnections and similarities among environmental media through its coverage of surface waters the subsurface and the atmosphere Written and organized concisely to map to a single semester course Discusses and builds upon fundamental concepts ensuring that the material is accessible to readers who do not have an extensive background in environmental science **Use of**

Microcomputer Programs for Groundwater Studies D. Clarke, 1987-06-01 This book provides the practising hydrogeologist with a selection of microcomputer programs which the author has found to be very useful as an aid in the investigation of groundwater wells and aquifers The programs are written in BASIC and are designed to suit as wide a range of computer as possible The book begins with a group of programs which solve several of the most common functions encountered in groundwater science These are then developed into programs capable of calculating drawdown in a variety of discharge rate aquifer boundary configurations either at one time or a series of exponentially increasing times The author shows how a computerised form of Newtons method for solving difficult equations may be applied to such tasks as evaluating storage coefficient if transmissivity is known Lagrangian interpolation is used to produce accurate values from tabled functions either within a program or on demand One of the major programs in the book may be used to enter discharge test data into a computer edit it as required e g change drawdown measurements from feet to metres or water levels to drawdowns etc and finally to analyse the data For example three different methods are provided for evaluation of the well equation Another program is provided for controlling a plotter to produce several popular types of discharge test graphs and a new image well method is included for simulating boundaries consisting of straight line junctions

between areas of two different transmissivities This is a practical book written to solve real life problems Accordingly program operation is clearly described but derivation of equations and functions have been omitted For those readers wishing to check on derivations references are provided Readers familiar with microcomputer programming may apply the programs given here to their own work perhaps incorporating them as subroutines into large more specialized programs Those unfamiliar with programming can use the programs as they are listed All programs are designed to be run with no more than an occasional reference to the written instructions being necessary
