

MILITIAS AT THE MILLENNIUM: A Test of Smelser's Theory of Collective Behavior

Stan C. Weeber
McNeese State University

Daniel G. Rodeheaver
University of North Texas

Critically important to Neil Smelser's theory of collective behavior is the idea that people join radical social movements because they experience strain. A social movement arises to reassure participants that something is being done to redress the underlying source of strain. Militia presence and activity on the Internet (especially Usenet) is a phenomenon that can be studied within Smelser's framework. Militia watchers contend that those who join the militias have experienced the kinds of strain to which Smelser refers. The purpose of this article is to analyze the content of Internet traffic of U.S. militias in order to test the thesis outlined above. It uses militia Web sites and militia messages posted to Usenet ($N = 1,196$) as primary data to test Smelser's theory. Information was gathered on 171 men and women from 28 U.S. militias who posted messages to Usenet from 1998–2001. Based on the militiamen/women studied, Smelser's thesis is generally confirmed. Most experienced some form of social stress or strain prior to or during the time that they were in the militia, and most conditions for social movement development as specified by Smelser were met and confirmed by the data.

As data-gatherers, sociologists have been mostly inattentive to the rise of the U.S. citizen militia movement in the 1990s. Except for Sean O'Brien and Donald Haider-Markel's (1998) examination of social correlates of rates of militia activity and James Aho's (1990; 1994) work on Idaho Christian Patriots, sociological investigations yielding quantitative or qualitative data are limited at best. True, researchers have studied the right wing and revolutionary right from a social movement perspective (Berlet 1995; Diamond 1995; Dobratz and Shanks-Meile 1997; Kaplan and Bjorno 1998; Kaplan and Weinberg 1998; Berlet and Lyons 2000; Kaplan 2000) or under the rubric of domestic terrorism (Hamm 1996; Turner 2001), and some of the subjects studied were possibly militiamen or women, given that membership in extreme right groups often overlap
